Alcohol Cell Membranes And Signal Transduction In Brain:

Alcohol, Cell Membranes, and Signal Transduction in Brain Christer Alling, Ivan Diamond, Steven W. Leslie, Grace Y. Sun, W. Gibson Wood, 2012-12-06 Alcohol abuse and alcoholism are international problems whose costs economical ly psychologically and medically have been well documented Alcohol is a unique drug in that the effects of excessive use can have a deleterious effect on most if not all organs of the body The brain is one of the organs most affected by excessive alcohol consumption Effects on the brain can be seen in cognitive function brain structure and neurochemistry Over the past few years there have been significant advances made in understanding how alcohol affects brain neurochemistry This book examines four major areas i e membrane lipids receptors and ion channels second messengers and gene expression where significant advancements have been made The book is divided into four sections based on the four major areas In each section data are examined that cover a range of approaches from in vitro to in vivo studies The section on membrane lipids includes recent developments in how ethanol affects membrane cholesterol domains polyunsaturated fatty acids the cause and consequences of phosphatidylethanol formation and the modulation of membrane protein function by lipid protein interaction The second section comprises chapters on NMDA and 5 HT₃ receptors including new aspects on alcohol neurotoxicity and the molecular heterogeneity that may underlie differences in alcohol sensitivity as well as chapters on GABA gated chloride flux and calcium channels *Pharmacological Effects of Ethanol on the Nervous System* Richard A. Deitrich, V. Gene Erwin, 1995-12-21 This book dissects the effects of ethanol on the major neurotransmitter systems affected by ethanol and correlates these actions with the behavioral consequences The subject is approached first from the perspective of the neurochemical system and the behaviors resulting from ethanol s effects on that system The behaviors themselves are discussed in later chapters Some older theories of the effects of ethanol such as the membrane fluidization hypothesis are evaluated in light of new and updated information Fetal Alcohol Syndrome FAS as well as the structural damage in the brain by long term ethanol exposure are also discussed **Ethanol and Intracellular Signaling** Jan B. Hoek, 2000 **Ethanol and Intracellular Signaling** , 2000 *The Pharmacology of Alcohol and Alcohol Dependence* Henri Begleiter, Benjamin Kissin, 1996 This is a comprehensive review of the pharmacological effects of alcohol and the mechanisms underlying the pathogenesis of alcoholism The book draws on general pharmacology neuropharmacology and alcohol studies to explore its theme The second volume in the ALCOHOL AND ALCOHOLISM series it focuses on the pharmacologic mechanisms underlying the development of alcoholism The first section on basic pharmacology is concerned with those aspects that are common to all of alcohol s effects These include pharmacokinetics general metabolism and cross tolerance The second section on neuropharmacology describes the effects of alcohol on various brain functions including circulation and metabolism The third section provides an in depth review of the neurobiology of physical dependence withdrawal and physiological tolerance The book as a whole gives a comprehensive and authoritative picture of the complex

pharmacologic actions of alcohol particularly on the nervous system For clinicians and researchers in the field of alcohol and alcoholism it will serve as a fundamental reference Toward a Molecular Basis of Alcohol Use and Abuse B. Jansson,H. Jörnvall,U. Rydberg,L. Terenius,B.L. Vallee,2013-03-13 The 39 chapters in this volume consider subjects ranging from genetics markers and molecular biology of alcoholism to clinical observations and treatment The aim is to integrate pertinent information from the fields of molecular and cell biology with view to establishing a molecular basis of alcohol use and abuse An initial preview summarizes historical aspects of alcohol use and subsequent chapters concern novel drugs pharmacological aspects gene structures cloning and enzymatic properties Also contributions by non traditional alcohol scientists have been included in this collection in order to highlight possible interaction and parallels between different fields Novel results of particular interest include up dated summaries on receptors enzymes and other proteins as well as corresponding gene structures and regulation setting the basis for distinguishing markers and pinpointing further possible pharmacological treatments **The Pharmacology of Alcohol Abuse** Henry R. Kranzler,2012-12-06 In recent years alcohol abuse has received increased international attention Such attention is justified by the enormous negative impact that this disorder has on health as well as on economic and social well being Governmental and other sources of research support have promoted substantial investigation into the negative consequences of alcohol examining both animal models and human subjects Consequently there has been a virtual explosion of preclinical and clinical data much of it focused on alcohol s pharmacologic effects However there have been few efforts to integrate this wealth of new information into a single manageable volume This volume provides an up to date in depth treatment of the pharmacology of alcohol particularly as it relates to alcohol abuse The overriding theme of the book is the interplay between the preclinical and clinical domains Increasingly these areas of investigation have served to inform one another a trend that can be expected to grow with time The topics covered include the effects of alcohol on biological systems and the impact of medications on those effects In addition recent insights obtained from molecular biological investigations are discussed in terms of their relevance for understanding the effects of alcohol at the cellular level and the implications of these for the development of medications Consideration is also given to important methodological issues that influence the evaluation of medications in the context of clinical trials **Special Report to the U.S. Congress on Alcohol and Health from the Secretary of Health and Human Services** ,2000 **International Review of Neurobiology** ,1996-12-02 Since 1959 International Review of Neurobiology has been a well known series appealing to neuroscientists clinicians psychologists physiologists and pharmacologists This important serial is now being combined with Neuroscience Perspectives and Methods in Neurosciences This combination results in a series that reaches a wider audience and publishes a greater number of thematic volumes Modulation of inhibitory and excitatory neurotransmitter receptors by protein phosphorylation The use dependent regulation of GABAA receptors Mechanisms of synaptic transmission in the neostriatum Regulation of neurotransmitters function by the

neuronal cytoskeleton The anatomy and physiology of opioids in the hippocampus The molecular biology and pharmacology of the cannabinoid receptor The use of invertebrate and mammalian model systems in the study of the anesthetic drug action Ethanol effects on ion channels and locomotion **Developmental Neurotoxicology** G Jean Harry, 1994-07-13

Developmental Neurotoxicology addresses a number of basic principles underlying the vulnerability of the developing nervous system to environmental toxicant exposure Evidence of functional alterations induced at levels of chemical exposure that fail to produce structural teratological alterations indicates that the evaluation of the functional capacity of exposed animals may indeed offer a sensitive evaluation of developmental toxicity The contributing authors discuss the basic principles of development in structure and functional components and present information covering various methodological approaches as well as evidence for the value of examining the developing nervous system for environmentally induced perturbations The final chapter covers how this type of data is used to evaluate human risk potential **New Research on**

Alcoholism Douglas R. Baye, 2007 Alcoholism is a disorder characterised by the excessive consumption of and dependence on alcoholic beverages leading to physical and psychological harm and impaired social and vocational functioning This book gathers new and important research on this socially and medically destructive disorder These include addiction issues forms of treatment behavioural and clinical studies **Handbook of the Medical Consequences of Alcohol and Drug Abuse**

Over the past decade much has been learned about the damaging effects that moderate to severe alcohol use has on tissue nutrient levels and dietary intake In addition to alcohol s potential to damage every organ in the body alcohol abuse or heavy use causes poorer dietary intake and provides a greater risk of alcohol s damage while increasing th *Review of NIAAA's Neuroscience and Behavioral Research Portfolio* Antonio Noronha,Michael Eckardt,Kenneth Rabinowitz Warren,2000

scientists is to identify the specific substrates e g metabolic enzymes Ca²⁺ regulating proteins transcription and mitotic factors for the many protein kinases to elucidate the biological significance of the cell type specific expression heterogeneity of signalling proteins e g membrane receptors isoenzymes of protein kinase C G proteins and to unravel the cross talk interaction between the signalling systems e g phospholipase C with adenylate cyclase and phospholipase C with phospholipase D The multiplicity of receptor types G proteins effector proteins second messengers and protein kinases their substrate proteins and the cross talk interactions in the myocardium raises fundamental questions about the mechanisms that ensure the precision and timing of the myocardial responses to hormonal and pharmacological stimuli This book provides an up to date source of information for all scientists and clinicians interested in the mechanisms by which external signals are transmitted to the interior and regulation of a variety of physiological pathological and pharmacological responses

Acamprosate in Relapse Prevention of Alcoholism Michael Soyka, 2012-12-06 Acamprosate is the first new anticraving agent used prophylactically to prevent relapse in alcohol dependent patients This book presents an overview on basic mechanisms in alcohol dependence and craving and all the preclinical and clinical results are available to date on Acamprosate s mechanisms of action and efficacy
