The Adversity Formula Steven Mason, 2024-06-14. Early in the 2020 pandemic, author Steven Mason, seeking inspiration to help cope during the COVID-19 crisis, began to examine the lives of some of the great personalities from history. After considerable research, he discovered that many of these individuals had overcome significant adversity on their path to success. After sharing these stories with others, he was inspired to write this book. The Adversity Formula: Inspirational Lessons from History reviews the lives of thirty remarkable characters from history to see how they dealt with adversity. The book goes on to provide a formula that readers can themselves apply to their own lives. Selected mainly from the 20th Century, the fifteen men and fifteen women include scientists, entrepreneurs, humanitarians, politicians, entertainers, sports stars and war heroes. The list contains well-known names like Stephen Hawking, Steve Jobs and Walt Disney but also features lesser-known profiles of Virginia Hall, Irena Sendler and Victor Frankl, a Holocaust survivor who, after his experiences in the concentration camps, developed a therapy to find meaning and purpose in adversity. The book looks at the adversity these greats faced, what they achieved despite it, but also how they dealt with adversity, often using it to their advantage. Their coping mechanisms are summarised in five characteristics for each individual and packaged into a general formula for tackling life's problems. The conclusion found within these pages is that it is often how people respond to adversity that can determine successful outcomes. The Adversity Formula: Inspirational Lessons from History will be particularly relevant to those interested in self-development, especially during difficult times, as well as those with a love of history. The book offers hope in the face of life's major challenges.

The Ethereal Aether Loyd S. Swenson, 1972-01-01. The Ethereal Aether is a historical narrative of one of the great experiments in modern physical science. The fame of the 1887 Michelson-Morley aether drift test on the relative motion of the earth and the luminiferous aether derives largely from the role it is popularly supposed to have played in the origins and later in the justification of Albert Einstein's first theory of relativity; its importance is its own. As a case history of the intermittent performance of an experiment in physical optics from 1880 to 1930 and of the men whose work it was, this study describes chronologically the conception, experimental design, first trials, repetitions, influence on physical theory and eventual climax of the optical experiment. Michelson, Morley and their colleague Miller were the prime actors in this half-century drama of confrontation between experimental and theoretical physics. The issue concerned the relative motion of Spaceship Earth and the Universe.

as measured against the background of a luminiferous medium supposedly filling all interstellar space At stake it seemed were the phenomena of astronomical aberration the wave theory of light and the Newtonian concepts of absolute space and time James Clerk Maxwell's suggestion for a test of his electromagnetic theory was translated by Michelson into an experimental design in 1881 redesigned and reaffirmed as a null result with Morley in 1887 thereafter modified and partially repeated by Morley and Miller finally completed in 1926 by Miller alone then by Michelson's team again in the late 1920s Meanwhile Helmholtz Kelvin Rayleigh FitzGerald Lodge Larmor Lorentz and Poincaré most of the great names in theoretical physics at the turn of the twentieth century had wrestled with the anomaly presented by Michelson's experiment As the relativity and quantum theories matured wave particle duality was accepted by a new generation of physicists The aether drift tests disproved the old and verified the new theories of light and electromagnetism By 1930 they seemed to explain Einstein relativity and space time But in historical fact the aether died only with its believers

The Weight of the

Vacuum Helge S. Kragh, James M. Overduin, 2014-05-21 The 2011 Nobel Prize in Physics was awarded for the discovery of cosmic acceleration due to dark energy a discovery that is all the more perplexing as nobody knows what dark energy actually is We put the modern concept of cosmological vacuum energy into historical context and show how it grew out of disparate roots in quantum mechanics zero point energy and relativity theory the cosmological constant Einstein's greatest blunder These two influences have remained strangely aloof and still co exist in an uneasy alliance that is at the heart of the greatest crisis in theoretical physics the cosmological constant problem *Einstein and Oppenheimer* Silvan S. Schweber, 2009-06-30 Albert Einstein and J Robert Oppenheimer two iconic scientists of the twentieth century belonged to different generations with the boundary marked by the advent of quantum mechanics By exploring how these men differed in their worldview in their work and in their day this book provides powerful insights into the lives of two critical figures and into the scientific culture of their times **School Library Journal** ,2005
