Newman, Lawrence M. Principe, 2010-11-15 Winner of the 2005 Pfizer Prize from the History of Science Society What actually took place in the private laboratory of a mid seventeenth century alchemist How did he direct his quest after the secrets of Nature What instruments and theoretical principles did he employ Using as their guide the previously misunderstood interactions between Robert Boyle widely known as the father of chemistry and George Starkey an alchemist and the most prominent American scientific writer before Benjamin Franklin as their guide Newman and Principe reveal the hitherto hidden laboratory operations of a famous alchemist and argue that many of the principles and practices characteristic of modern chemistry derive from alchemy By analyzing Starkey's extraordinary laboratory notebooks the authors show how this American chymist translated the wildly figurative writings of traditional alchemy into quantitative carefully reasoned laboratory practice and then encoded his own work in allegorical secretive treatises under the name of Eirenaeus Philalethes The intriguing mystic Joan Baptista Van Helmont a favorite of Starkey Boyle and even of Lavoisier emerges from this study as a surprisingly central figure in seventeenth century chymistry A common emphasis on quantification material production and analysis synthesis the authors argue illustrates a continuity of goals and practices from late medieval alchemy down to and beyond the Chemical Revolution
