Conscience in Recovery from Alcohol Addiction Yordan Kalev Zhekov, 2013-02-01 Academic research in alcohol addiction presents diverse results and subject inadequacies. This study identifies conscience and its influence through spirituality on successful recovery as promoting unity and adequacy in the field. The purpose of the study is to analyze the relationship between conscience, spirituality and recovery from alcohol addiction. This threefold framework underlines the conceptual importance of cognition, affect, behavior, spirituality and character in addiction studies. Narrative analysis (NA) is employed for designing the present research. It is utilized for collection, examination and formulation of the results derived from the participants' stories. Semi structured interviews are used within the NA framework to provide the data from the twelve participants. The latter are selected as a homogeneous group based on characteristics of their addiction, spirituality and recovery. The analysis of narratives defines conscience with its cognitive, emotive and conative elements as related to spirituality. The conscience's nature and functioning undergo deterioration during addiction and complete rejuvenation through participants' spiritual transformation of a transcendent divine experience. Spiritually empowered conscience supports progressive recovery from alcohol addiction. The conscientious approach to self, life and others is shaped by virtue and spiritual commitment.

Trauma Rehabilitation Lawrence Russell Robinson, 2006 Written by a multidisciplinary team of experts from the University of Washington Harborview Medical Center, this volume is the first comprehensive clinical reference on trauma rehabilitation. The book brings together in one concise, cohesive source all the essential practical information from psychiatry, orthopaedics, neurosurgery, general surgery, emergency medicine, rehabilitation nursing, physical therapy, occupational therapy, speech pathology and prosthetics/orthotics. Chapters cover traumatic brain injury, spinal cord injury, multiple musculoskeletal trauma, traumatic amputations, peripheral nerve injuries and burns. Particular attention is given to early rehabilitation interventions during the acute phase. A chapter on special considerations for pediatric patients is also included.
