Airway Wall Remodelling In Asthma:

Airway Wall Remodelling in Asthma A. G. Stewart, 2020-10-28 Asthma is a disease of high prevalence that has shown a trend toward increasing incidence morbidity and mortality over the last three decades despite apparently effective drug treatments and increasing awareness of the need for better disease management Often the inflammatory component of asthma is studied however the tissue remodelling process is a significant process that should not be overlooked This valuable reference synthesizes current data and concepts developed to determine the relationship between airway wall remodelling and the pathogenesis of asthma It discusses evidence for structural changes in asthmatic airway the relationship between airway thickening and hyperresponsiveness the relationship between cytokine production and tissue remodelling and inflammation the significance of epithelial changes and the extracellular matrix and in vivo and in vitro experimental approaches to the assessment of remodelling Pharmacological and biochemical mechanisms that control cell proliferation are also examined The consequences of airway wall remodelling for airway hyperresponsiveness is the unique focus of this volume offering a fresh perspective of advances in asthma research

Cell Therapy for Lung Disease Julia Polak,2010 The use of stem cells to help with lung regeneration and repair is a novel therapy which could help phase out the need for conventional surgical or pharmacological approaches currently employed to treat diseases of the lung or other organs The present book explores all avenues of this new form of medical care moving swiftly but in depth from the basic science of lung development to the analyses of different stem cell types available for regeneration and on to the application of this knowledge base in initial clinical trials In this volume a stellar group of researchers converge from different angles to help towards clarifying the basic mechanisms of lung repair These range from basic concepts of regeneration and lung development the analyses of a variety of cell types that may be involved in lung repair to ways of creating complex lung structures including artificial and bioartificial lungs The book offers an insight into repair mechanisms of the diseased lung the role of specific lung niches and provides information on initial clinical trials as well as the use of stem cells as vehicles for gene therapy Ingenious technological aspects of assessing stem cell engraftment of stem cell bioprocessing are also included in this volume Publisher's website Airways Smooth Muscle: Modelling the

Asthmatic Response In Vivo David Raeburn,Mark A. Giembycz,2012-12-06 Building on the existing titles in the Airways Smooth Muscle sub series the sixth volume explores physiological and pharmacological processes in the lung in vivo The various animal models available for studying the bronchospasm and inflammation associated with human asthma are thoroughly reviewed by internationally recognised scientists Specific chapters focus on the problems of administering drugs to animal airways the mechanics of assessing lung function in the models and describe in detail the species used from rodents to primates The use of genetically altered animals an area of particular interest to molecular biologists is also considered in depth This up to date and extensively referenced work will prove invaluable to pharmacologists physiologists and other biological scientists at all levels in academia and in the pharmaceutical industry **Bronchial Vascular**

Remodeling in Asthma and COPD Aili Lazaar,2006-08-04 Responding to the growth of research in the field over the past decade this book brings together leading investigators with expertise in pulmonology pathology and developmental biology to clarify the mechanisms that regulate the development of bronchial vascular remodeling in asthma and COPD as well as explore the pathophysiological processes that may impact the formulation of new therapeutic strategies for these conditions

Airways and Vascular Remodelling in Asthma and Cardiovascular Disease Clive Page,Judith Black,1994-11-10 Vascular diseases and asthma are two common diseases associated with considerable morbidity and mortality Both are chronic each has an inflammatory component both are accompanied by remodelling of hollow tubes and both are amenable to early intervention This book compares and contrasts research progress made in each area including our current understanding of

the pathophysiology involved and the results of large scale multicentre trials **Airway Wall Remodelling in Asthma** Tiffany Lisette Bamford,2005 *Cellular Mechanisms in Airways Inflammation* Clive P. Page,Katharine H. Banner,Domenico Spina,2013-03-11 Airways inflammation is a complex biological phenomenon resulting from the recruitment and activation of numerous cell types Airways inflammation contributes to the pathophysiology of airways disease An understanding of the mechanisms that regulate inflammatory cell function is essential for the development of novel anti inflammatory drugs for the treatment of common respiratory diseases such as asthma and COPD This book provides a collection of valuable reviews on the major inflammatory cells involved in airways disease and examines the pharmacology of current anti inflammatory drugs used in the treatment of airways disease Moreover an insight into the development of emerging drug therapies is also highlighted This book is a must for the library of any researcher or clinician interested in the pathophysiology of airways disease **Current Review of Asthma** Michael A. Kaliner,2002-12-09 This comprehensive source of up to date information on asthma diagnosis and treatment offers concise discussions on concomitant diseases and treatment choices Coverage includes epidemiology pathology airway remodeling and pathophysiology Each chapter offers a topic overview followed by an analysis of current understanding supplemented by charts tables and graphs Dr Michael A Kaliner the editor contributes a chapter The Pathogenesis of Bronchial Asthma drawing on his 30 years of clinical experience **Airway Smooth Muscle in Asthma and COPD** Kian Fan Chung,2008-04-30 In this book leading researchers in medicine and molecular pharmacology explain the cellular mechanisms that control airway smooth muscle The means by which these are disrupted in disease and the pharmacologic strategies by which they may be modified are discussed and future therapeutic interventions are identified Aimed at specialists in pulmonology this volume provides the clinician with the most up to date information on one of the core physiological processes in airway disease and offers insights into current and future approaches to management Authoritative update on key mechanisms of airway constriction in Asthma and COPD Relates latest research to bronchodilator therapy Multi contributed text co coordinated by two of the leading authorities in the field

Immunological Mechanisms in Asthma and Allergic Diseases Douglas S. Robinson,2000-01-01 This book explores the cellular and molecular mechanisms involved in asthma and allergic diseases from basic immunology to the treatment of patients Arising from a special symposium held to celebrate Professor A Barry Kay s 20th anniversary as Head of the Department of Allergy and Clinical Immunology at the National Heart and Lung Institute London the publication presents 18 review articles by an impressive cross section of experts in the field Topics considered include Th1 and Th2 cells the regulation of Th2 cytokine transcription the role of T cells in the immunopathogenesis of asthma and MHC restricted IgE independent T cell induced late phase responses in human subjects Further chapters focus on eosinophil adhesion and activation the role of C C chemokines in the recruitment of eosinophils and the interactions between eosinophils and fibroblasts T cell recruitment and T cell interactions in cutaneous basophil hypersensitivity and fibrotic lung disease are

discussed as is the molecular pathology of allergic disease Finally treatment approaches are considered in chapters on the molecular basis of corticosteroid actions in asthma immunosuppression in asthma and immunotherapy of allergic diseases

Asthma and Rhinitis William W. Busse, Stephen T. Holgate, 2008-04-30 The second edition of this highly acclaimed text has been extensively revised and greatly expanded to reflect the considerable advances made in our understanding of the mechanisms of asthma and rhinitis Containing the contributions of 242 experts of international standing presented in 133 chapters *Asthma and Rhinitis* provides an up to date authoritative reference for both the clinician and scientist The global approach given in this book mirrors the universal approach to the understanding of allergic disease The editors have carried out a thorough and radical revision of the content by adding 6 new sections and 44 new chapters Most of this expansion is due to greatly increased coverage of the clinical aspects of asthma with new sections on childhood asthma and on drug treatment each drug class has its own chapter Also the expansion of research into the genetic basis of asthma has necessitated a whole new section on Genetics comprising some six chapters There are also new chapters on adult onset asthma and the relationship of asthma to sinusitis A new section on Asthma in Special Circumstances includes chapters on asthma in pregnancy asthma and surgery asthma in the elderly and asthma in the context of critical care In bringing the Second Edition fully up to date the book has inevitably increased in size and is now presented in two volumes The second edition of *Asthma and Rhinitis* will continue the tradition of its predecessor of providing an up to the minute reference for all those involved in the management of and research into asthma and rhinitis **The Rising Trends in Asthma** Derek J.

Chadwick, Gail Cardew, 2008-04-30 Asthma is a growing health problem throughout the developed world This volume presents a critical review of all the possible factors for this rising trend and includes research that has not yet been published in the scientific literature Discusses the basic biology of asthma and addresses genetic influences Surveys the epidemiological evidence for the worldwide trends in morbidity and mortality *Focus on Asthma Research* Miroslav

Tersa, 2004 Asthma is a disease that affects the lungs It causes repeated episodes of wheezing breathlessness chest tightness and nighttime or early morning coughing Tens of millions of people throughout the world suffer from asthma Airways are the paths that carry air to the lungs As the air moves through the lungs the airways become smaller like branches of a tree During an attack the sides of the airways in the lungs become inflamed and swollen Muscles around the airways tighten and less air passes in and out of the lungs Excess mucus forms in the airways clogging them even more The attack also called an episode can include coughing chest tightness wheezing and trouble breathing Environmental exposures such as house dust mites and environmental tobacco smoke are important triggers of an attack This new book presents important new research on the causes on asthma as well as its diagnosis and treatment The Pulmonary Epithelium in Health and Disease David
