Eva Interglaciation Forest Bed, Unglaciaded East-central Alaska Troy Lewis Péwé, 1997. The ancient boreal Eva forest forms the centerpiece in this evaluation of the time and nature of the environment during an interglaciation. This title brings together results of examination of hundreds of loess exposures when loess faces were still frozen in gold mining excavation and data on the character and age of the deposits from fission track dating of tephra, paleomagnetism of the loess, thermoluminescence dating of loess and radiocarbon dating by liquid scintillation. Dendrochronology studies of trees are compared to those from trees of the modern boreal forest.

New to the Second Edition: This second edition incorporates 50 percent more material. It includes seven new chapters that cover occupancy problems, Stirling and Catalan numbers, graph theory, trees, Dirichlet's pigeonhole principle, Ramsey theory and rook polynomials. This edition also contains more than 450 exercises. Ideal for both classroom teaching and self study, this text requires only a modest amount of mathematical background. In an engaging way, it covers many combinatorial tools such as the inclusion-exclusion principle.
