## **Alaskan Shelf:**

The Alaskan Shelf G.D. Sharma, 2012-12-06 From a general point of view the importance of striving to minimize environmental disturbances on the continental shelf cannot be overemphasized Coastal areas are sites of population centers navigation and recreation activities and source development all of which contribute to environmental stress on the shelf Proper management of the shelf for optimum use requires a thorough understanding of shelf processes Complex problems such as the influence of hydrodynamics on sediment dispersal element differentiation and migration physiochemical changes at the sediment water interface the relationship between the pollutants and sediments and the type of substrate with regard to benthic community and or man made structures require a multidisciplinary approach to their solution The present study interrelates meteorologic hydrographic sedimentologic and geochemical parameters to derive specific environments on the Alaskan Shelf These observations are then related to geologic principles in an effort to elucidate the sedimentary processes and elemental migration on the shelf Attempts have also been made to relate the sediment texture to the geochemistry of the sediments Obviously the chemistry is complicated as a result of biogenic contributions and variable provenance however to some extent elemental differentiation accompanies textural differentiation in sediments The distribution of elements in various phases of crustal source rocks is generally interpreted on the basis of crystallographic concepts especially the concept of isomorphism
