Edible Forest Gardens, Volume II Dave Jacke, Eric Toensmeier, 2005-10-21. An edible forest garden is a perennial polyculture of multipurpose plants. Most plants regrow every year without replanting perennials. Many species grow together in a polyculture. Each plant contributes to the success of the whole by fulfilling many functions, multipurpose. In other words, a forest garden is an edible ecosystem, a consciously designed community of mutually beneficial plants and animals intended for human food production. Edible forest gardens provide more than just a variety of foods. The seven F's apply here: food, fuel, fiber, fodder, fertilizer, and farmaceuticals, as well as fun. A beautiful lush environment can be a conscious focus of your garden design or a side benefit you enjoy from your website.
