The Quest for Food Harald Brüssow, 2007-06-01 When you go into a scientific library or look through the catalogues of scientific publishers you will quickly find books from food scientists food technologists food

chemists food microbiologists and food toxicologists Agronomists nutritionists and physicians have written on food and last but not least cooks What I missed was a book on food written from the perspective of a biologist When Susan Safren the food science editor from Springer Science Business Media LLC invited me to write a book I decided that I would write this book on food biology What I had in mind was a survey on eating through space and time in a very fundamental way but not in the format of a systematic textbook The present book is more of an ordered collection of scientific essays Contents In Chapter 1 I start with a prehistoric Venus to explore the relationship between sex and food Then I use another lady Europe to investigate the strong links between food and culture I then ask what is eating in a very basic but simple physicochemical sense In Chapters 2 and 3 I embark on a biochemistry oriented travel following the path of a food molecule through the central carbon pathway until it is decomposed into CO and H₂O and a lot of ATP My account does not intend to teach biochemistry but to use recent research articles from major scientific journals to look behind food biochemistry
