Division of Research Grants,1968 **Research Awards Index** , Mycobacterial Skin Infections Domenico Bonamonte,Gianni Angelini,2017-09-04 This well illustrated book is a comprehensive guide to the cutaneous clinical presentations of mycobacterial infections The Mycobacterium genus includes over 170 species nontuberculous mycobacteria NTM having been added to the obligate human pathogens such as M tuberculosis and M leprae NTM are widely distributed in the

environment with high isolation rates worldwide the skin is a major target with variable clinical manifestations A current resurgence in tuberculosis is aggravated by the synergy with human immunodeficiency virus the breakdown of health care systems and the rise in multidrug resistant disease as the incidence of leprosy remains stable at around 250 000 new cases annually regardless of effective antibiotic therapy Presentations of various cutaneous infections caused by mycobacteria may be overlooked by clinicians owing the lack of familiarity with tuberculosis leprosy and the related NTM clinical features This handy guide will help the dermatologist to spot the different clinical manifestations make a prompt diagnosis and apply effective treatment

Extreme Measures Brian K. McNab, 2024-05-31 Along with reproduction balancing energy expenditure with the limits of resource acquisition is essential for both a species and a population to survive But energy is a limited resource as we know well so birds and mammals the most energy intensive fauna on the planet must reduce energy expenditures to maintain this balance some taking small steps and others extreme measures Here Brian K McNab draws on his over sixty years in the field to provide a comprehensive account of the energetics of birds and mammals one fully integrated with their natural history McNab begins with an overview of thermal rates much of our own energy is spent maintaining our 98.6 F temperature and explains how the basal rate of metabolism drives energy use especially in extreme environments He then explores those variables that interact with the basal rate of metabolism like body size and scale and environments highlighting their influence on behavior distribution and even reproductive output Successive chapters take up energy and population dynamics and evolution A critical central theme that runs through the book is how the energetic needs of birds and mammals come up against rapid environmental change and how this is hastening the pace of extinction
