Explorations in Temperament Jan Strelau, Alois Angleitner, 2013-11-11 The growing interest in research on temperament during the last decade has been re corded by several authors e g R Plomin J E Bates from such sources of informa tion as the Social Sciences Citation Index or Psychological Abstracts The editors inquiry shows that the number of cases in which the term temperament was used in the title of a paper or in the paper s abstract published in Psychological

Abstracts reveals an essential increase in research on temperament During the years 1975 to 1979 the term temperament was used in the title and or summary of 173 abstracts i e 34 6 publications per year during the next five years 1980 1984 it was used in 367 abstracts 73 4 publications per year whereas in the last five years 1985 to 1989 the term has appeared in 463 abstracts that is in 92 6 publications per year Even if the review of temperament literature is restricted to those abstracts it can easily be concluded that temperament is used in different contexts and with different meanings hardly allowing any comparisons or general statements One of the consequences of this state of affairs is that our knowledge on temperament does not cumulate despite the increasing research activity in this field This situation in temperament research motivated the editors to organize a one week workshop on The Diagnosis of Temperament Bielefeld Federal Republic of Germany September 1987

Invented Worlds Ellen Winner, 1982 Cave paintings of our prehistoric ancestors elaborate ritual dances of preliterate tribesmen long lines at the movies earnest scribbles of the three year old next door evidence of human preoccupation with art is everywhere and it is overwhelming But unlike other human universals language tool use the family art makes no material contribution to mankind s survival What impels the artist to the lonely effort at self expression What moves the audience to resonate to the work of a master What accounts for the child s inherent fascination with pictures and stories and songs These questions are among the deepest we can ask about human nature Freud deemed some of them forever unanswerable but modern psychology has made new inroads into these old mysteries Invented Worlds provides a complete authoritative account of this progress Dealing with the three major art forms painting music and literature Ellen Winner shows how the artist fashions a symbolic world that transforms the experience of the observer She probes the adult s ability to create and respond to works of art In addition she examines children s art for what it can reveal about the artistic impulse before adult convention becomes a shaping force Finally in order to reach a better understanding of the biological bases of artistry Winner discusses the art of the mentally disturbed and the neurologically impaired patient The sum of these discussions is more than an up to date handbook to the field it is nothing less than a new synthesis of our understanding of man s artistic nature Written with admirable clarity Invented Worlds is a book that can be used by professionals and students in psychology education and the arts as well as anyone with reason to be curious about the processes that underlie the creation and enjoyment of art

The Biopsychology of Mood and Arousal Robert E. Thayer, 1990-09-27 What is the biological function of daily mood variations What is the relationship between mood and such factors as exercise time of day nutrition stress and illness Drawing on his own wide ranging research concerning subjective assessments of mood and on extensive research by others Dr Thayer presents a comprehensive theory of normal mood states viewing them as subjective components of two biological arousal systems one which people find energizing and the other which people describe as producing tension The author explains these two mood effects in relation to a complex relationship between energy and tension Relevant research is systematically reviewed and moods are analyzed
