Art Of Teaching Science Inquiry And Innovation In Middle School And High School:

The Art of Teaching Science Jack Hassard, Michael Dias, 2013-07-04 The Art of Teaching Science emphasizes a humanistic experiential and constructivist approach to teaching and learning and integrates a wide variety of pedagogical learning tools These tools involve inquiry and experimentation reflection through writing and discussion as well as experiences with students science curriculum and pedagogy Becoming a science teacher is a creative process and this innovative textbook encourages students to construct ideas about science teaching through their interactions with peers professionals and instructors and through hands on minds on activities designed to foster a collaborative thoughtful learning environment

The World of Science Education ,2010-01-01 Each volume in the 7 volume series The World of Science Education reviews research in a key region of the world These regions include North America South and Latin America Asia Australia and New Zealand Europe and Israel Arab States and Sub Saharan Africa The focus of this Handbook is on science education in Asia and the scholarship that most closely supports this program The reviews of the research situate what has been accomplished within a given field in an Asian rather than an international context The purpose therefore is to articulate and exhibit regional networks and trends that produced specific forms of science education The thrust lies in identifying the roots of research programs and sketching trajectories focusing the changing face of problems and solutions within regional contexts The approach allows readers to review what has been done and accomplished what is missing and what might be done next

A Contemporary Autobiography of a Science Educator Scott D.

Robinson, 2008-01-01 A Contemporary Autobiography of a Science Educator reminds readers that they teach who they are and understanding who they are is fundamental for meaningful communication and effective classroom instruction The book is for science educators teacher educators and others who wish to examine their own personal and professional identities in the social and cultural contexts in which their lives are embedded Just as teaching can be viewed as relationship with others this contemporary autobiography is situated on the significance of relationship with self As a contemporary autobiography the narrative reveals the author's subjective truths while digging deeply into psychosocial motives of power and intimacy The author reflects on his personal choices and career decisions that led him into and out of high school science teaching The book contains stories and reflections from summer work camp experiences undergraduate college days teacher preparation episodes and high school science teaching Story themes are diversity and leadership group identity and motivation urban teaching and teacher preparation and high school science teaching These themes evolve out of nuclear episodes of the author's storied life that brings present day understanding and meaning from past actions and interactions This kind of

critical introspection may hold special relevance for teachers teacher educators and others who wish to make their own identities salient and relevant to their own needs and interests as well as the needs and interests of students teacher candidates and clients whom they serve

Evolution and Religion in American Education David E. Long, 2011-08-03
 Evolution and Religion in American Education shines a light into one of America's dark educational corners exposing the regressive pedagogy that can invade science classrooms when school boards and state overseers take their eyes off the ball. It sets out to examine the development of college students' attitudes towards biological evolution through their lives. The fascinating insights provided by interviewing students about their world views adds up to a compelling case for additional scrutiny of the way young people's educational experiences unfold as they consider and indeed in some cases reject one of science's strongest and most cogent theoretical constructs. Inevitably open discussion and consideration of the theory of evolution can chip away at the mental framework constructed by Creationists eroding the foundations of their faith. The conceptual battleground is so fraught with logical challenges to Creationist dogma that in a number of cases students' exposure to such dangerous ideas is actively prevented. This book provides a detailed map of this astonishing struggle in today's America a struggle many had thought was done and dusted with the onset of the Enlightenment.

Becoming Scientific Saima Salehjee, Mike Watts, 2020-08-18
 What does it mean to be sciencey? Why do some people of all ages engage avidly with space and astronauts, birds and butterflies, chemicals and equations while others detest and hate the very ideas? This book develops in depth analyses of the science identities of very different people, young and old, of diverse backgrounds in order to explore their immersion in and entanglement with the processes of learning science. At the centre of the book lies a collection of their science life stories detailing their engagement with both formal education in schools and colleges and informal science learning in the culture of everyday life. The text highlights how science educators, teachers, parents and science communicators more generally can foster and support the formation and transformation of people's science identities.
