Critical Terms for Art History, Second Edition Robert S. Nelson, Richard Shiff, 2010-03-15 Art has always been contested terrain whether the object in question is a medieval tapestry or Duchamp's Fountain But questions about the categories of art and art history acquired increased urgency during the 1970s when new developments in critical theory and other intellectual projects dramatically transformed the discipline The first edition of Critical Terms for Art History both mapped and contributed to those transformations offering a spirited reassessment of the field's methods and terminology Art history as a field has kept pace with debates over globalization and other social and political issues in recent years making a second edition of this book not just timely but crucial Like its predecessor this new edition consists of essays that cover a wide variety of loaded terms in the history of art from sign to meaning ritual to commodity Each essay explains and comments on a single term discussing the issues the term raises and putting the term into practice as an interpretive framework for a specific work of art For example Richard Shiff discusses Originality in Vija Celmins's To Fix the Image in Memory a work made of eleven pairs of stones each consisting of one original stone and one painted bronze replica In addition to the twenty-two original essays this edition includes nine new ones performance style memory monument body beauty ugliness identity visual culture visual studies and social history of art as well as new introductory material All help expand the book's scope while retaining its central goal of stimulating discussion of theoretical issues in art history and making that discussion accessible to both beginning students and senior scholars Contributors Mark Antliff Nina Athanassoglou Kallmyer Stephen Bann Homi K. Of Two Minds James Blachowicz, 1998-02-05 The logic of correction developed here directly opposes the claim made by evolutionary epistemologists such as Popper and Campbell that there is no such thing as a logical method for having new ideas The author argues that beyond scientific discovery the same logic can be found in the more intimate form of inquiry we conduct as we attempt to articulate meanings for ourselves

Nelson Goodman's Philosophy of Art

Catherine Z. Elgin,1997 A challenger of traditions and boundaries A pivotal figure in 20th century philosophy Nelson Goodman has made seminal contributions to metaphysics epistemology aesthetics and the philosophy of language with surprising connections that cut across traditional boundaries In the early 1950s Goodman Quine and White published a series of papers that threatened to torpedo fundamental assumptions of traditional philosophy They advocated repudiating analyticity necessity and prior assumptions Some philosophers realizing the seismic effects repudiation would cause argued that philosophy should retain the familiar framework Others considered the arguments compelling but despaired of doing philosophy without the framework Goodman disagreed with both factions Rather than regretting the loss of structure he capitalized on the opportunities that arise when the strictures of tradition are loosened *Art and Illusion* Ernst Hans Gombrich,1972 **Unreal** Michael D. Halliday,2015-12-22 This book takes a critical but easy to read look at key subjects in the humanities including our human limitations and the weaknesses in philosophy itself It examines major areas such as religion where thinkers go beyond science in an attempt to find the ultimate realities it turns a sceptical eye on moral codes of social behaviour artistic beliefs and values and radically appraises just what we can come to know about our history A final chapter probes behind the often fond and fanciful notions of that which we find meaningful in culture and our lives more generally In short an engaging disturbing and thought provoking modern world view is on offer here along the paths for tracking truth A common theme that links the wide ranging subjects in the book is to question the coherence of their character in some cases their worth and desirability and even their own reality It poses a radical challenge to conventional ways of looking at matters across the humanities by combining the text with insights from contemporary continental thinkers In *Unreal* there is largely a chopping down yet the intention is not to be negative for the sake of it but to ensure that people are not duped by the manifold cases of intellectual charlatanism in the wider world That some of this erroneous thinking is extensive enough to encompass whole subjects is perhaps no surprise yet it is both a scandalous and dangerous reflection on human thought *Philosophy and the Art of Writing* Berel Lang,1983 **Religion in Mind** Jensine Andresen,2001-06-28 Religion in Mind is a 2001 text which summarizes and extends the advances in the cognitive study of religion throughout the 1990s It uses empirical research from psychology and anthropology to illuminate various components of religious belief ritual and experience The book examines cognitive dimensions of religion within a naturalistic view of culture while respecting the phenomenology of religion and drawing together teachers of religion psychologists of religion and cognitive scientists Expert contributors focus on phenomena such as belief fixation and transmission attributions of agency anthropomorphizing counterintuitive religious representations the well formedness of religious rituals links between religious representations and emotions and the development of god concepts The work encourages greater interdisciplinary linkages between scholars from different fields and will be of interest to researchers in anthropology psychology sociology history philosophy and cognitive science It also will interest more general readers in religion and science *Blind Spots* Frederic J.

Schwartz,2005-01-01 In four extended case studies the book traces the way in which central concepts of the aesthetics later termed Frankfurt School were deeply rooted in contemporary developments in painting photography architecture and films as well as psychology advertising and the discipline of art history as it was practised by figures such as Heinrich Wölfflin Erwin Panofsky Wilhelm Pinder and Hans Sedlmayr By studying the emergence and importance of the concepts of fashion distraction non simultaneity and mimesis in the work of the critical theorists the book traces the shifting intersection between the history of art and the Frankfurt School and seeks to uncover its specific logic *Art in Action* Nicholas Wolterstorff,1980 Taking vigorous issue with the pervasive Western notion that the arts exist essentially for the purpose of aesthetic contemplation Nicholas Wolterstorff proposes instead what he sees as an authentically Christian perspective that art has a legitimate even necessary place in everyday life While granting that galleries theaters and concert halls serve a valid purpose Wolterstorff argues that art should also be appreciated in action in private homes in hotel lobbies in factories and grocery stores on main street His conviction that art should be multifunction is basic to the author's views on art in the city he regards most American cities as dehumanizing wastelands of aesthetic squalor dominated by the demands of the automobile and leads him to a helpful discussion of its role in worship and the church Developing an aesthetic that is basically grounded yet always sensitive to the human need for beauty Wolterstorff make a brilliant contribution to understanding how art can serve to broaden and enrich our lives *What Is Music?* Philip Alperson,2010-11-01 *The Self and Its Brain* Karl R. Popper,John C. Eccles,2012-12-06 The problem of the relation between our bodies and our minds and especially of the link between brain structures and processes on the one hand and mental dispositions and events on the other is an exceedingly difficult one Without pretending to be able to foresee future developments both authors of this book think it improbable that the problem will ever be solved in the sense that we shall really understand this relation We think that no more can be expected than to make a little progress here or there We have written this book in the hope that we have been able to do so We are conscious of the fact that what we have done is very conjectural and very modest We are aware of our fallibility yet we believe in the intrinsic value of every human effort to deepen our understanding of our selves and of the world we live in We believe in humanism in human rationality in human science and in other human achievements however fallible they are We are unimpressed by the recurrent intellectual fashions that belittle science and the other great human achievements An additional motive for writing this book is that we both feel that the debunking of man has gone far enough even too far It is said that we had to learn from Copernicus and Darwin that man's place in the universe is not so exalted or so exclusive as man once thought That may well be Aesthetics and Painting Jason Gaiger,2008-12-23 A sophisticated treatment of major ideas in art and philosophy this text presents a clear and coherent account of the nature of painting **Pixels & Paintings** David G. Stork,2023-11-15 PIXELS PAINTINGS The discussion is firmly grounded in established art historical practices such as close visual analysis and an understanding of artists working methods and real world examples

Visual Metaphors Réka Benczes, Veronika Széld, 2022-09-15

Whenever we think about the world including its concrete and abstract entities we typically see a series of so called mental images in front of our eyes that aid us in everyday problem solving and navigating ourselves in the world Visual metaphors similarly to their linguistic counterparts largely build on such images Nevertheless the interplay of metaphorical metonymical text and imagery is not necessarily and not usually straightforward and raises complex theoretical and methodological questions The eleven chapters in this collection address a wide range of such challenges such as what are visual metaphors in the first place how can they be identified what is their relationship to linguistic metaphors what are their most common manifestations what knowledge structures are required for their interpretation and how do they interact with metonymies The studies cut across linguistics politics philosophy poetry art and history highlighting the ubiquitous role that visual metaphor plays in everyday life and conceptualizations Originally published as special issue of Cognitive Linguistic Studies 7 1 2020 Boston University Journal Boston University.
