Artefacts Of Complexity:

Artefacts of Complexity J. N. Postgate, 2002 *Foundations for Functional Modeling of Technical Artefacts* Morten Lind, 2023-12-07 This monograph provides a new framework for modelling goals and functions of control systems It demonstrates how to use means end concepts and various aspects of action to describe the relations between the structure dispositions functions and goals of technical systems and with human action The author developed this approach as part of his research on Multilevel Flow Modelling MFM He based the framework on concepts of action and means end analysis drawing on existing theories from several areas of study including philosophical logic semiotics and phenomenological approaches to social science Here he applies it to three modeling situations related to the interaction of technical artefacts and humans One involves the relation between designer and artefact another the relation between technical artefact and its user and the third the relation between a natural object and its user All three are relevant for modelling complex automated processes interacting with human operators The book also discusses challenges when applying the foundations for modelling of technical artefacts Overall it provides a cross disciplinary integration of several fields of knowledge These disciplines include intelligent process control human machine interaction and process and automation design As a result researchers and graduate students in computer science engineering and philosophy of technology will find it a valuable resource

Joint Cognitive Systems Erik Hollnagel, David D. Woods, 2005-02-28 Nothing has been more prolific over the past century than human machine interaction Automobiles telephones computers manufacturing machines robots office equipment machines large and small all affect the very essence of our daily lives However this interaction has not always been efficient or easy and has at times turned fairly hazardous *Bio A.I. - From Embodied Cognition to Enactive Robotics* Adam Safron, Inês Hipólito, Andy Clark, 2023-12-08 Even before the deep learning revolution the landscape of artificial intelligence AI was already changing drastically in the 90s Embodied intelligence it was proposed must play a crucial role in the design of intelligent machines This new wave was inspired by what is today known as Embodied and Enactive Cognitive Science or E Cognition which considers that cognitive activity does not reduce to the intellectual capacities of agents being able to represent their environments E cognition set AI and robotics in a new direction in which intelligent machines are required to interact with the environment and where this interaction does not reduce to explicit representations or prespecified algorithms These ideas revolutionized the way we think about intelligent machines and cognition but these theoretical advances are only partially reflected in modern approaches to AI and machine learning ML Despite deeply impressive achievements AI ML still struggles to recapitulate the kinds of intelligence we find in natural systems whether we are considering individual insects e g simultaneous localization and mapping or swarm behaviour e g foraging sensing and ensemble inferences and especially the kinds of flexibility and high level reasoning characteristic of human cognition **The Archaeology of Human Origins** Glynn Llywelyn Isaac, 1989 A collection of the most influential papers of the late Glynn

Isaac **Engineering and Philosophy** Zachary Pirtle, David Tomblin, Guru Madhavan, 2021-05-14 Engineers love to build things and have an innate sense of wanting to help society. However, these desires are often not connected or developed through reflections on the complexities of philosophy, biology, economics, politics, environment, and culture. To guide future efforts and to best bring about human flourishing and a just world, *Engineering and Philosophy: Reimagining Technology and Progress* brings together practitioners and scholars to inspire deeper conversations on the nature and varieties of engineering. The perspectives in this book are an act of reimagination: how does engineering serve society, and in a vital sense, how should it? *Advanced Information Systems Engineering* Zohra Bellahsène, Michel Léonard, 2008-06-08 CAiSE 2008 was the 20th in the series of International Conferences on Advanced Information System Engineering. This edition continued the success of previous conferences, a success largely due to the fact that since its first edition, this series has evolved in parallel with the evolution of the importance of information systems in economic development. CAiSE has been able to follow and often to anticipate important changes that have occurred since 1978 when the first CAiSE conference was organized by Arne Sjølvberg and Janis Bubenko. In all these years, modern businesses and IT systems have been facing an ever more complex environment characterized by openness, variety, and change. Furthermore, enterprises are experiencing ever more variety in their business in many dimensions. In the same way, the explosion of information technologies is overwhelming, with a multitude of languages, platforms, devices, standards, and products. Thus, enterprises need to manage an environment to monitor the interplay of changes in the business processes in information technologies and at the ontological level in order to achieve a sustainable development of their information systems. Enterprises must enter the era of sustainable information systems to face the important developmental challenges. During all these years, CAiSE researchers have been challenged by all these changes, and the CAiSE conferences provide a forum for presenting and debating important scientific results. In fact, CAiSE is positioned at the core of these tumultuous processes, hosting new emerging ideas, fostering innovative processes of design and evaluation, developing new information technologies adapted to information systems, creating new kinds of models, but always being subject to rigorous scientific selection. **Co-Evolution of Metamodels and Model Transformations** Steffen Kruse, 2015-08-03 Complexity is an essential property of software systems that increases in a non-linear fashion with the size of the software system. In software engineering, Model Driven Engineering (MDE) aims to alleviate this complexity by utilising models and modelling activities to raise the level of abstraction and to automate the production of artefacts. One specialised technique with this purpose is the model transformation, which allows the automated creation and modification of output models based on input models. As models and model transformations are used in a productive capacity, they underlie the same evolutionary pressure that conventionally build software systems do. Here, the tight coupling between model transformations and metamodels becomes problematic, as changing the one often results in the need to check and adapt the other accordingly. This thesis presents an operator-based stepwise approach to support software architects in the co-evolution of metamodels.

and model transformations The approach allows the description of changes done to a metamodel and the automatic or semi automatic resolution of the impact on related model transformations Overall the effort needed for co evolution is reduced

Díaz López, Massimiliano Mazzanti, Roberto Zoboli, 2023-10-06 Through careful investigation into the role of eco innovation as a catalysing factor in the societal transition towards sustainability this Handbook proposes more appropriate measures of innovation as a driver of change It examines innovation from various perspectives including labour trade the circular economy and energy to illustrate a more comprehensive picture of its impacts **Autonomic Computing** Philippe Lalanda, Julie A. McCann, Ada Diaconescu, 2013-05-13 This textbook provides a practical perspective on autonomic computing Through the combined use of examples and hands on projects the book enables the reader to rapidly gain an understanding of the theories models design principles and challenges of this subject while building upon their current knowledge Features provides a structured and comprehensive introduction to autonomic computing with a software engineering perspective supported by a downloadable learning environment and source code that allows students to develop execute and test autonomic applications at an associated website presents the latest information on techniques implementing self monitoring self knowledge decision making and self adaptation discusses the challenges to evaluating an autonomic system aiding the reader in designing tests and metrics that can be used to compare systems reviews the most relevant sources of inspiration for autonomic computing with pointers towards more extensive specialty literature *Settling the Earth* Clive Gamble, 2013-12-30 How and when did we become the only human species to settle the whole earth How did our brains become so large In this book Clive Gamble sets out to answer these fundamental questions digging deep into the archives of archaeology fossil ancestors and human genetics The wealth of detail in these sources allows him to write a completely new account of our earliest beginnings a deep history in which we devised solutions not only to the technical challenges of global settlement but also cracked the problem long before writing and smartphones of how to live apart yet stay in touch The Onlife Manifesto Luciano Floridi, 2014-11-16 What is the impact of information and communication technologies ICTs on the human condition In order to address this question in 2012 the European Commission organized a research project entitled The Onlife Initiative concept reengineering for rethinking societal concerns in the digital transition This volume collects the work of the Onlife Initiative It explores how the development and widespread use of ICTs have a radical impact on the human condition ICTs are not mere tools but rather social forces that are increasingly affecting our self conception who we are our mutual interactions how we socialise our conception of reality our metaphysics and our interactions with reality our agency In each case ICTs have a huge ethical legal and political significance yet one with which we have begun to come to terms only recently The impact exercised by ICTs is due to at least four major transformations the blurring of the distinction between reality and virtuality the blurring of the distinction between human machine and nature the reversal from information scarcity to information abundance and the shift from the primacy of stand alone things properties and binary relations to the primacy of interactions processes and networks Such transformations are testing the

foundations of our conceptual frameworks Our current conceptual toolbox is no longer fitted to address new ICT related challenges This is not only a problem in itself It is also a risk because the lack of a clear understanding of our present time may easily lead to negative projections about the future The goal of The Manifesto and of the whole book that contextualises is therefore that of contributing to the update of our philosophy It is a constructive goal The book is meant to be a positive contribution to rethinking the philosophy on which policies are built in a hyperconnected world so that we may have a better chance of understanding our ICT related problems and solving them satisfactorily The Manifesto launches an open debate on the impacts of ICTs on public spaces politics and societal expectations toward policymaking in the Digital Agenda for Europe s remit More broadly it helps start a reflection on the way in which a hyperconnected world calls for rethinking the referential frameworks on which policies are built

Designing the Information Systems Artefact Robert Winter, 2025-08-30 This book provides essential methodological guidance on IS artifacts to address key challenges in Design Science Research DSR As a foundation for understanding and categorizing DSR artifacts it proposes a more differentiated empirically justified DSR artifact typology Additionally it presents an artifact type agnostic architecture model for DSR project knowledge offering concrete recommendations for researchers and practitioners alike As most DSR artifacts exist on a wide range of abstraction levels an artifact type agnostic perspective of abstraction is presented and a set of fundamental generalization and contextualization operations is proposed The concept of managed evolution and insights from tension theory are used to propose a collaboration model fostering effective interaction between researchers and practitioners in DSR Finally by associating empirically validated classes of functional requirements with solution classes candidates for general constructional patterns are developed All chapters share a contemporary understanding of DSR artifacts as complex combinations of IT organizational and use elements ranging from algorithms to informal interventions in organizations These artifacts are based on both descriptive knowledge and empirical justifications or ideally both and are exemplified by contextualized instantiations that solve situated problems in organizations or administrations This book provides a unified and practical approach to advancing DSR offering insights for both advanced academic researchers and industry practitioners whose work involves IS artifacts

Handbook of Research on Advancing Teaching and Teacher Education in the Context of a Virtual Age Zimmerman, Aaron Samuel, 2022-12-28 The possibilities of the virtual age can provide many valuable resources and opportunities for teachers preservice teachers and teacher educators However in order to utilize these resources responsibly and productively the researchers and practitioners of teaching and teacher education must better understand the new potentials and pitfalls related to teaching and learning that are present within the virtual age The Handbook of Research on Advancing Teaching and Teacher Education in the Context of a Virtual Age focuses on the recent innovations in teaching and teacher educations as well as innovations in the curriculum and pedagogy of teacher education It deepens discussions related to how teacher education can address educational possibilities within this digital

age Covering topics such as learning material adaptation teacher talent pipelines and metaverse this major reference work is a comprehensive resource for administrators and educators of both K 12 and higher education teacher educators pre service teachers government officials librarians researchers and academicians *Flexible Views for View-based Model-driven Development* Burger, Erik, 2014-11-14 Modern software development faces the problem of fragmentation of information across heterogeneous artefacts in different modelling and programming languages In this dissertation the Vitruvius approach for view based engineering is presented Flexible views offer a compact definition of user specific views on software systems and can be defined the novel ModelJoin language The process is supported by a change metamodel for metamodel evolution and change impact analysis Design Process Improvement John Clarkson, Claudia Eckert, 2010-03-26 vi The process is important I learned this lesson the hard way during my previous existence working as a design engineer with PA Consulting Group s Cambridge Technology Centre One of my earliest assignments involved the development of a piece of laboratory automation equipment for a major European pharmaceutical manufacturer Two things stick in my mind from those early days first that the equipment was always to be ready for delivery in three weeks and second that being able to write well structured Pascal was not sufficient to deliver reliable software performance Delivery was ultimately six months late the project ran some sixty percent over budget and I gained my first promotion to Senior Engineer At the time it puzzled me that I had been unable to predict the John Clarkson real effort required to complete the automation project I had Reader in Engineering Design genuinely believed that the project would be finished in three Director Cambridge Engineering weeks It was some years later that I discovered Kenneth Cooper s Design Centre papers describing the Rework Cycle and realised that I had been the victim of undiscovered rework I quickly learned that project plans were not just inaccurate as most project managers would attest but often grossly misleading bearing little resemblance to actual development practice
