American Psychology And Schools A Critique:

American Psychology & Schools Seymour Bernard Sarason, 2001-01-01 Dr Sarason pulls no punches in this searing critique of American psychology and its current and historical disinterest in our schools This book explains why psychology's continued aloofness impoverishes the field and prevents it from capitalizing upon its potential to serve the public welfare He describes how after World War II American psychology took steps to respond to societal needs but rebuffed efforts to include the improvement of schools Bringing his discussion completely up to date Dr Sarason includes two extended chapters about the Columbine incident why psychologists offered few conclusions concerning what those killings signified about schools in general and high schools in particular He also criticizes test developers for their failure to seek and prevent school personnel from interpreting and using tests in ways that negatively affect students As readers might expect Dr Sarason gets right to the heart of the matter in this powerful depiction of all that psychology can but declines to do for our schools

the center of this book is the complex and perplexing question of how to design professional preparation programs organizational management practices public policy systems and robust professional associations committed to and capable of maintaining confidence trust and the other hallmarks of responsible professionalism To do this we need to rebuild our understanding of professional responsibility from the ground up We describe how individuals might be prepared to engage in responsible professional service delivery examine promising options for the reform of professional service systems and finally outline a reform strategy for improving practice in education and medicine two essential public services The nexus of the reform problem in professionalism is establishing a more robust and effective working relationship between teachers and their students between health care professionals and their patients and between educators and health professionals Professionalism means acceptance of professional responsibility for student and patient outcomes not just acceptance of responsibility for technical expertise but commitment to the social norms of the profession including trustworthiness and responsibility for client wellbeing In the past it may have been sufficient to assume that adequate knowledge can be shaped into standards of professional practice Today it is clear that we must take careful account of the ways in which practicing professionals develop internalize and sustain professionalism during their training along with the ways in which this commitment to professionalism may be undermined by the regulatory fiscal technological political and emotional incentive systems that impinge on professional workplaces and professional employment systems
