Sample Surveys: Design, Methods and Applications, 2009-08-31 This new handbook contains the most comprehensive account of sample surveys theory and practice to date. It is a second volume on sample surveys with the goal of updating and extending the sampling volume published as volume 6 of the Handbook of Statistics in 1988. It can serve as a self-contained guide to researchers and practitioners with appropriate balance between theory and real life applications. Each of the two volumes is divided into three parts with each part preceded by an introduction summarizing the main developments in the areas covered in that part. Volume 29A deals with methods of sample selection and data processing with the later including editing and imputation handling of outliers and measurement errors and methods of disclosure control. The volume contains also a large variety of applications in specialized areas such as household and business surveys, marketing research, opinion polls and censuses. Volume 29B is concerned with inference distinguishing between design based and model based methods and focusing on specific problems such as small area estimation, analysis of longitudinal data, categorical data analysis and inference on distribution functions. The volume contains also chapters dealing with case control studies, asymptotic properties of estimators and decision theoretic aspects. Coverage Measurement in the 2010 Census National Research Council, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Panel on Correlation Bias and Coverage Measurement in the 2010 Decennial Census, 2009-02-08 The census coverage measurement programs have historically addressed three primary objectives 1 to inform users about the quality of the census counts 2 to help identify sources of error to improve census taking and 3 to provide alternative counts based on information from the coverage measurement program In planning the 1990 and 2000 censuses the main objective was to produce alternative counts based on the measurement of net coverage error For the 2010 census coverage measurement program the Census Bureau will deemphasize that goal and is instead planning to focus on the second goal of improving census processes This book which details the findings of the National Research Council's Panel on Coverage Evaluation and Correlation Bias strongly supports the Census Bureau's change in goal However the panel finds that the current plans for data collection data analysis and data products are still too oriented towards measurement of net coverage error to fully exploit this new focus Although the Census Bureau has taken several important steps to revise data collection and analysis procedures and data products this book recommends further steps to enhance the value of coverage measurement for the improvement of future census processes
