societa level by addressing grand challenges and global goals using big data and intervening at the population level Bringing together social organizational cultural and health psychology research the book demonstrates a broad range of areas benefitting from a macropsychology perspective particularly areas integral to the realization of the Sustainable Development Goals SDGs Contributors address the value of macropsychological perspectives in addressing sub topics such as Mental health Personality traits and social structure Disability rights Food systems Humanitarian work psychology Macropsychology A Population Science for Sustainable Development Goals aims to recognise and give impetus to a neglected perspective within psychology and to inspire a paradigm widening within the field of psychology facilitating greater involvement with social justice and human rights
