Regions of War and Peace Douglas Lemke,2002-01-21 In this contribution to the literature on the causes of war Douglas Lemke asks whether the same factors affect minor powers as affect major ones He investigates whether power parity and dissatisfaction with the status quo have an impact within Africa the Far East the Middle East and South America Lemke argues that there are similarities across these regions and levels of power and that parity and dissatisfaction are correlates of war around the world The extent to which they increase the risk of war varies across regions however and the book looks at the possible sources of this cross regional variation concluding that differential progress toward development is the likely cause This book will interest students and scholars of international relations and peace studies as well as comparative politics and area studies A

Digest of New York Statutes and Reports Benjamin Vaughan Abbott,Austin Abbott,1867 **Climate Change Impact on Livestock: Adaptation and Mitigation** Veerasamy Sejian,John Gaughan,Lance Baumgard,Cadaba Prasad,2015-03-31 This volume addresses in detail both livestock s role in climate change and the impacts of climate change on livestock production and reproduction Apart from these cardinal principles of climate change and livestock production this volume also examines the various strategies used to mitigate livestock related GHG emissions and those which can reduce the impacts of climate change on livestock production and reproduction Presenting information and case studies collected and analyzed by professionals working in diversified ecological zones the book explores the influence of climate change on livestock production across the globe The most significant feature of this book is that it addresses in detail the different adaptation strategies and identifies targets for different stakeholders in connection with climate change and livestock production Further it puts forward development plans that will allow the livestock industries to cope with current climate changes and

strategies that will mitigate the effects by 2025 Lastly it provides researchers and policymakers several researchable priorities to help develop economically viable solutions for livestock production with less GHG emissions promoting a cleaner environment in which human beings and livestock can live in harmony without adverse effects on productivity Given that livestock production systems are sensitive to climate change and at the same are themselves a contributor to the phenomenon climate change has the potential to pose an increasingly formidable challenge to the development of the livestock sector However there is a dearth of scientific information on adapting livestock production to the changing climate as such well founded reference material on sustaining livestock production systems under the changing climate scenarios in different agro ecological zones of the world is essential By methodically and extensively addressing all aspects of climate change and livestock production this volume offers a valuable tool for understanding the hidden intricacies of climatic stress and its influence on livestock production

Water Chemistry Stanley E. Manahan, 2010-08-19 Carefully crafted to provide a comprehensive overview of the chemistry of water in the environment *Water Chemistry: Green Science and Technology of Nature's Most Renewable Resource* examines water

issues within the broad framework of sustainability an issue of increasing importance as the demands of Earth's human population threaten to overwhelm the planet's carrying capacity. Renowned environmental author Stanley Manahan provides more than just basic coverage of the chemistry of water. He relates the science and technology of this amazing substance to areas essential to sustainability science including environmental and green chemistry, industrial ecology, and green sustainable science and technology. The inclusion of a separate chapter that comprehensively covers energy including renewable and emerging sources sets this book apart. Manahan explains how the hydrosphere relates to the geosphere, atmosphere, biosphere, and anthrosphere. His approach views Planet Earth as consisting of these five mutually interacting spheres. He covers biogeochemical cycles and the essential role of water in these basic cycles of materials. He also defines environmental chemistry and green chemistry, emphasizing water's role in the practice of each. Manahan highlights the role of the anthrosphere, that part of the environment constructed and operated by humans. He underscores its overwhelming influence on the environment and its pervasive effects on the hydrosphere. He also covers the essential role that water plays in the sustainable operation of the anthrosphere and how it can be maintained in a manner that will enable it to operate in harmony with the environment for generations to come. Written at an intermediate level, this is an appropriate text for the study of current affairs in environmental chemistry. It provides a review and grounding in basic and organic chemistry for those students who need it and also fills a niche for an aquatic chemistry book that relates the hydrosphere to the four other environmental spheres.
