development The objective of Pricing the Planet's Future is to provide a simple framework to organize the debate on what we should do for the future A key element of analysis by economists is the discount rate the minimum rate of return required from an investment project to make it desirable to implement Christian Gollier outlines the basic theory of the discount rate and the various arguments that favor using a smaller discount rate for more distant cash flows With principles that can be applied to many policy areas Pricing the Planet's Future offers an ideal framework for dynamic problems and decision making

Dictionary of Minor Planet Names Lutz D. Schmadel, 2013-11-11 to the Third Edition People love to name things Parents name their children Children name their pets Why Otherwise rational human beings put an inordinate effort into this naming activity Some names are selected to remind the namer of some other person place or event In other instances the choice of a name means something that sounds good or is easily spelled What's the baby's name is much more likely to be asked than some question about its state of health its weight or the color of its eyes People are often named according to religious tradition exemplified in the custom in some countries of speaking of a christian name In other countries it is a given name often the name of some favored relative particularly a father as in the system of patronymics In some parts of the world a name may be more practical making it clear that this person is number one son for example But in such a case why not simply give numbers to the children in order of their birth One might presume that other animals number their children take one away and the mother will realize that the count is wrong possibly even to the point of knowing precisely which infant has been removed The most basic part of speech is a noun a word that itself means name particularly in its dominant use as the subject i.e. in the nominative case
