Imagined Truths Bryant Griffith, 2012-01-01 Education is often envisioned as a linear one way cause and effect process with teaching as the cause learning as the effect But the relationships are less tidy less passive and more cyclical than that There is a continuous cycle of inquiry discovery and integration leading to further inquiry Technology facilitates the exchange of information not just teacher to student but student to teacher and student to student The result is that the nature of the development of learning knowledge and even wisdom becomes more transparent This presents challenges of method and identity for the teacher but more importantly it enforces a sense among students of their critical investment in their own education Teachers and learners need to contemplate why and how they construct knowledge An essential part of this reflection is questioning the premises that govern our views of the world as well as the premises of what is presented as

knowledge This demands a new epistemology and requires that teachers change their conceptual structures and recognize that all theories of knowledge are not founded solely on formal logic using uninterpreted experience as data Moreover it demands that new models be considered as ways of making sense and of understanding As teachers we realize that learning how to cope with changes of this magnitude requires leadership where relationships are crucial The rapidly emerging significance of social networks is reshaping our world a world that isn't flat but where spiky concentrations of people work together to make things happen creatively It is more the case that the education we need to provide is to solve problems we can't conceive Our cultural narratives when freed of the bounds of instrumental learning become powerful tools for an emerging world where questions and answers are not simple cause and effect equations Yes the teacher is a facilitator but one with the mastery of sufficient material to be able to paint numerous contexts for the learner We need to be open attentive and anticipatory to that which may surprise us to that which we will not expect The shape of past knowledge can be discovered by reflecting on the ways in which we make decisions and by asking why questions These questions frame intentions and focus on the specific process of knowing why and how ideas have changed from the past to the present By placing the self in the middle this process becomes a trialectic of relational thought which in turn becomes the dialectic of learning

From Vocational To Higher Education: An International Perspective Moodie, Gavin, 2008-10-01 This book discusses current issues in vocational and higher education and the relations between them

The Building Blocks of Thought Stephen Laurence, Eric Margolis, 2024-12-17 This is an open access title available under the terms of a CC BY NC ND 4.0 International licence It is free to read on Oxford Academic and offered as a free PDF download from OUP and selected open access locations This is a broad and authoritative study of one of the central topics in the study of the mind the origins of concepts The authors survey the debate between rationalists and empiricists which stretches back to the very beginnings of philosophy and has been at the centre of some of the most exciting research in cognitive science Many have charged that the debate is riddled with confusion or that rationalist approaches in particular are deeply problematic The Building Blocks of Thought offers a comprehensive rethinking of the foundations of this debate showing that these negative appraisals are based on misunderstandings Stephen Laurence and Eric Margolis argue that the debate should be understood

to concern the nature of the unlearned psychological traits that provide the foundation for learning all concepts They go on to argue for a version of concept nativism according to which there is a rationalist account of the origins of many concepts across many different conceptual domains This rationalist view is developed around seven distinct arguments drawing on a wealth of data across the cognitive sciences which are shown to come together to form a unified large scale argument to the best explanation for a rationalist account of the origins of concepts Rounding out the case for concept nativism the book contrasts this view with the most important and influential empiricist views as well as alternative rationalist views including Fodor s infamous radical concept nativism and his claim that concept learning is impossible The Building Blocks of Thought argues for the enormous importance of learning and culture showing how a thoroughly rationalist approach facilitates and enhances cultural learning and provides the foundations for the best overall account of the origins of concepts The Sonic Color Line Jennifer Lynn Stoeve,2016-11-15 Race is a visual phenomenon the ability to see difference At least that is what conventional wisdom has lead us to believe Yet The Sonic Color Line argues that American ideologies of white supremacy are just as dependent on what we hear voices musical taste volume as they are on skin color or hair texture Reinforcing compelling new ideas about the relationship between race and sound with meticulous historical research Jennifer Lynn Stoeve helps us to better understand how sound and listening not only register the racial politics of our world but actively produce them Through analysis of the historical traces of sounds of African American performers Stoeve reveals a host of racialized aural representations operating at the level of the unseen the sonic color line and exposes the racialized listening practices she figures as the listening ear New York University Press **Scientism and Education** Emery J. Hyslop-Margison,M. Ayaz Nasee,2007-10-23 This volume offers a critical examination of the mounting pressure placed on educators to apply scientific principles to improve education By revealing many of the epistemological problems confronted by the social sciences including education the authors undermine the prevailing view that a science of education is possible or desirable Instead it proposes alternative practices to strengthen democratic learning practices **Handbook of Interdisciplinary Teaching and Administration** Rick Szostak,2024-09-06 Championing an emerging global community of scholars this Handbook provides a detailed examination on how to successfully integrate interdisciplinarity into education programs A comprehensive look into the current landscape of the field it emphasises the importance of interdisciplinary teaching and administration in the development of creativity citizenship and information literacy This title contains one or more Open Access chapters **Liberalising the Accounting Curriculum in University Education** Alan Sangster,Richard M.S. Wilson,2014-10-29 This book presents the views of accounting educators accounting education policy makers and accounting practitioners from across the world on the challenging topic of liberalising the accounting curriculum within university education Accounting is a relatively new subject within universities and has been absorbed into a high level of education without any real attempt to do so within the traditional ethos of a liberal arts education In this book the logic of

teaching using the liberal arts is described and contrasted with the practical vocational training approach of teaching which has formed the foundation of accountancy courses for many years A proposal to change this established practice by integrating the liberal arts into the university accounting curriculum is followed by a series of short chapters which address the relevance validity and worthiness of the proposed approach Comments and counter arguments are then discussed before further chapters illustrate how the proposed change may be achieved in a variety of different contexts ranging from that of the global financial crisis which began in 2008 to the inclusion of ethics and sustainability within the accounting curriculum This book will aid those teaching accounting in universities to improve the design of their accounting degree programmes by moving away from an excessive emphasis on technical skills towards a broader consideration of a liberal contextualisation of the accounting curriculum This book was originally published as a special issue of Accounting Education an international journal

Meeting the Challenges to Measurement in an Era of Accountability Henry Braun, 2016-01-29 Under pressure and support from the federal government states have increasingly turned to indicators based on student test scores to evaluate teachers and schools as well as students themselves The focus thus far has been on test scores in those subject areas where there is a sequence of consecutive tests such as in mathematics or English language arts with a focus on grades 4-8 Teachers in these subject areas however constitute less than thirty percent of the teacher workforce in a district Comparatively little has been written about the measurement of achievement in the other grades and subjects This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas with particular attention to their use in the evaluation of teachers and schools in all It addresses traditional end of course tests as well as alternative measures such as portfolios exhibitions and student learning objectives In each case issues related to design and development psychometric considerations and validity challenges are covered from both a generic and a content specific perspective The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research based applications of educational measurement and assessment Edited by leading experts these books are comprehensive and practical resources on the latest developments in the field The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license
