Courtship Behaviors Of The Hawaiian Picture Winged Drosophila:

Courtship Behaviors of the Hawaiian Picture-Winged Drosophila Herman T. Spieth, 1984-01-01 *Handbook of Behavior Genetics* Yong-Kyu Kim, 2009-03-25 Behavior Genetics is an interdisciplinary area combining behavioral sciences and genetics The study of behavior genetics has become increasingly important as we see growth spurts in finding genes involved in complex behaviors following on advances in molecular genetic techniques This domain has now become a vast common ground for scientists from very diverse fields including psychology psychiatry neurology endocrinology biochemistry neuroimaging and genetics However there are not many textbooks or references to which students in behavior genetics can access for their research and class The purpose of this handbook is to offer research guides to the studies of genetic and environmental influences on a variety of complex behaviors in humans and animals Unlike previous behavior genetics textbooks this handbook will discuss current research and topics of interest to psychologists psychiatrists and geneticists Utilizing methodologies and theories commonly used in behavior genetics each chapter will begin with an overview of the selected topic current research and issues will be intensively reviewed and we will direct future research on the topic at the end of the chapter So the handbook will integrate many of the basic issues of the Behavior Genetics and will enhance our understanding in many fields Therefore this handbook will provide future research endeavors for the next 10 years Throughout this handbook the editor will collaborate with contributors who are internationally well known in the field The Behavior Genetics Association members and the Behavior Genetics Editorial Advisory Board will be invited to review the manuscripts of this handbook

Hawaiian Natural History, Ecology, and Evolution Alan C. Ziegler, 2002-09-30 Not since Willam A Bryan s 1915 landmark compendium Hawaiian Natural History has there been a single volume work that offers such extensive coverage of this complex but fascinating subject Illustrated with more than two dozen color plates and a hundred photographs and line drawings Hawaiian Natural History Ecology and Evolution updates both the earlier publication and subsequent works by compiling and synthesizing in a uniform and accessible fashion the widely scattered information now available Readers can trace the natural history of the Hawaiian Archipelago through the book s twenty eight chapters or focus on specific topics such as island formation by plate tectonics plant and animal evolution flightless birds and their fossil sites Polynesian migrational history and ecology the effects of humans and exotic animals on the environment current conservation efforts and the contributions of the many naturalists who visited the islands over the centuries and the stories behind their discoveries An extensive annotated bibliography and a list of audio visual materials will help readers locate additional sources of information

Mating Systems and Strategies Stephen M. Shuster, Michael J. Wade, 2019-12-31 This book presents the first unified conceptual and statistical framework for understanding the evolution of reproductive strategies Using the concept of the opportunity for sexual selection the authors illustrate how and why sexual selection though restricted to one sex and opposed in the other is one of the strongest and fastest of all evolutionary forces They offer

a statistical framework for studying mating system evolution and apply it to patterns of alternative mating strategies In doing so they provide a method for quantifying how the strength of sexual selection is affected by the ecological and life history processes that influence females spatial and temporal clustering and reproductive schedules Directly challenging verbal evolutionary models that attempt to explain reproductive behavior without quantitative reference to evolutionary genetics this book establishes a more solid theoretical foundation for the field Among the weaknesses the authors find in the existing data is the apparent ubiquity of condition dependent mating tactics They identify factors likely to contribute to the evolution of alternative mating strategies which they argue are more common than generally believed and illustrate how to measure the strength of selection acting on them Lastly they offer predictions on the covariation of mating systems and strategies consider the underlying developmental biology behind male polyphenism and propose directions for future research Informed by genetics this is a comprehensive and rigorous new approach to explaining mating systems and strategies that will influence a wide swath of evolutionary biology

A Revision of the Jumping Spider Genus *Habronattus*
F.O.P.-Cambridge (Araneae, Salticidae), with Phenetic and Cladistic Analyses Charles E. Griswold, 1987 *Courtship and Mate-finding in Insects* Raymond J.C. Cannon, 2023-06-30 This book explores mate finding and courtship behaviour in the insect world in all its subtlety and diversity Insects engage in courtship as much or as little as any other animal they have songs and dances and all manner of instruments and ornaments to attract and court the opposite sex Insects have evolved complex chemical and acoustic communication systems sending fragrant messages visual signals and subtle vibrations to attract and persuade Insects also have many different ways and means of choosing or rejecting mating partners This beautifully illustrated book shows the incredible variety of courtship behaviours and celebrates the wonderful natural history of a wide range of insects Varieties of courtship can occur before during and even after copulation and numerous examples of the different mating strategies used are presented This landmark volume will be of interest to students of biology entomologists naturalists and anyone with a desire to know more about the love lives of the small creatures with which we share the planet

Animal Models of Behavior Genetics Jonathan C. Gewirtz, Yong-Kyu Kim, 2016-08-10 This stimulating analysis reviews the broad potential of animal models to foster a deeper understanding of human pathology strengthen connections between genetic and behavioral studies and develop more effective treatments for mental disorders Widely studied and lesser used species are examined in models that capture features along the continuum of normative and pathological behavior The models highlight genetic causes of core features or endophenotypes of developmental internalizing and externalizing disorders as well as dementia Expert contributors address questions ranging from how suitable species are chosen for study to the costs and benefits of using inbred versus outbred strains and the effects of housing environment on subject animals Larger issues addressed include how to evaluate the applicability of animal behavioral models to the human condition and how these models can harness emerging molecular technologies to further our understanding of the genetic

basis of mental illness Included in the coverage Mating and fighting in *Drosophila* Attachment and social bonding Impulsivity in rodents and humans Animal models of cognitive decline Animal models of social cognition Future directions for animal models in behavioral genetics A detailed map of where this evolving field is headed Animal Models of Behavior Genetics shows geneticists molecular biologists and cognitive neuroscientists paths beyond established concepts toward a more knowledgeable and collaborative future

Cladistic Analysis of North American Platynini and Revision of the Agonum Extensicolle Species Group (Coleoptera, Carabidae) James Kenneth Liebherr, 1986-01-01 Cladistic analysis based on internal male female reproductive characters and external characters is used to group exemplar taxa in the carabid tribe Platynini A classification key to genera in North America and a key to species groups of *Agonum* in North America north of Mexico are presented The *Agonum extensicolle* species group comprises seven species A cyanope Bates A extimum Liebherr n sp A parextimum Liebherr n sp A texanum LeConte A extensicolle Say A decorum Say A elongatulum Dejean Analyses of infraspecific geographic variation show 1 A texanum is biometrically uniform over the center of its range whereas individuals from outlying populations deviate in several measurements 2 A extensicolle is a variable species with clinal changes in biometry and color occurring across its range 3 A decorum is polymorphic for color and setation and clinally variable in biometric characters Across the group flight apparatus development is inversely correlated with the amount of genetic heterogeneity measured by starch gel electrophoresis Electrophoretic qualitative morphological and biometric data are used to estimate phylogenetic relationships in the A extensicolle group The electrophoretic and morphological data produce compatible estimates of phylogeny The biometric data are incompatible with the other data and are judged less useful for estimation of affinities Distributional data are utilized in conjunction with the proposed phylogeny to investigate speciation events in the group The principal mechanism is allopatric speciation brought about by vicariance across the lowlands of southeastern Arizona the Cochise filter barrier A second pattern involves a peripheral isolate of Antillean stock diverging on the Florida peninsula A third speciation event involves a habitat shift in which a lowland desert form produced a species which now inhabits the pine oak zone in the Sierra Madre Occidental The area taxon relationships are compared with those in other groups Based on an electrophoretic clock calibrated using data from *Drosophila* the timing of the initial speciation event in the group is estimated at 6 12 million years b p Other speciation events occurred throughout the Pliocene and Pleistocene with the most recent divergence of A decorum and A elongatulum estimated at less than two million years b p

Progress and Prospects in Evolutionary Biology Jeffrey R. Powell, 1997-09-04 This book focuses on *Drosophila* as an especially useful model organism for exploring questions of evolutionary biology in the full range of evolutionary studies population genetics ecology ecological genetics speciation phylogenetics genome evolution molecular evolution and development The author presents an integrated view of evolutionary biology as elucidated in this single organism Special effort is made to point out holes in our knowledge and areas particularly ripe for new investigation **Bees of the New**

Genus Ctenoceratina in Africa, South of the Sahara (Hymenoptera: Apoidea) Howell V. Daly, 1988-01-01 The African continent has a rich fauna of insects many of which are unstudied This monograph treats one such group known as the small carpenter bees Thirteen biological species in a new genus are described and a key for identification and details of their nests and natural enemies are given Molecular Evolution and Adaptive Radiation Thomas J. Givnish, Kenneth J. Sytsma, 2000-05-08 This volume surveys advances in the study of adaptive radiation showing how molecular characters can be used to analyze the origin and pattern of diversification within a lineage in a non circular fashion Revision of the Genus Enallagma of the United States West of the Rocky Mountains and Identification of Certain Larvae by Discriminant Analysis (Odonata:Coenagrionidae) Rosser W. Garrison, 1984 **Atlas of Hawai'i** University of Hawaii at Hilo. Dept. of Geography, 1998-01-01 A large format atlas includes 250 geographical topographical and reference maps 215 color photographs charts and graphs an introduction to Hawaiian place names and essays on the state's physical biological cultural and social environment Simultaneous UP **The Cerambycidae of North America, Part VII, No. 1** Earle Gorton Linsley, John A. Chemsak, 1984-01-01 This volume concludes the taxonomy and classification of the family Cerambycidae of America north of Mexico This part includes the remainder of the subfamily Lamiinae tribes Acanthocini Cyrtini Saperdini Phytoeciini Tetraspini and Hemilophini The 32 genera and 138 species are all fully described with keys included to separate all taxa Complete synonymical bibliographies are presented along with 54 illustrations Evolutionary Biology Max K. Hecht, Ross J. MacIntyre, Michael T. Clegg, 2012-12-06 After volume 33 this book series was replaced by the journal Evolutionary Biology Please visit www.springer.com/11692 for further information This volume continues bringing to readers the findings of eminent evolutionary biologists and paleobiologists Among the topics discussed in this book are the origin of the dermal skeleton in conodont chordates patterns of nucleotide substitution and codon usage in plasmid DNA evolution a model to explain phenotype stability in functional systems and inter island speciation of Hawaiian biota *A Natural History of the Hawaiian Islands* E. Alison Kay, 1994-12-01 This volume brings together recent primary source materials on major themes in Hawaiian natural history the geological processes that have built the Islands the physical factors that influence the Islands' terrestrial ecosystems the dynamics of the sea that support coral reefs fish and mollusks the peculiarities of animals and plants that have evolved in the Islands and are found nowhere else and the human impact on the land plants and animals

Genetics of Mate Choice: From Sexual Selection to Sexual Isolation W.J. Etges, M.A. Noor, 2012-12-06 Genetic studies aimed at understanding the origin of species are dominating major scientific journals In the past decade genetic tools that were previously available only in model systems have become accessible to investigators working on nearly all species Concurrent with these technical advances has been an increase in understanding of both the importance of considering the ecological context of speciation and testing hypotheses about causes for species formation Many recent studies suggest a prominent role of sexual selection in species formation These advances have produced a need for a synthesis of what we now

understand about speciation and perhaps more importantly where we should go from here In this volume several leading investigators and rising stars have contributed reviews and or novel primary research findings aimed at understanding the ultimate mystery on which Darwin named his most famous and influential book Fundamental to the origin of species is the evolution of mate choice systems This collection of papers discusses burgeoning genetic evolutionary and ecological approaches to understanding the origins of mating discrimination and causes of premating reproductive isolation both within and between species The individual contributions span a wide spectrum of disciplines taxa and ideas some controversial This synthesis brings together several of the most recent ideas with supporting empirical data This book will be of particular interest to both undergraduate and postgraduate researchers and students and researchers in the field of evolutionary biology genetics and animal behaviour **Mosaic** ,1985 **Genetic Mechanisms of Speciation in Insects** M.J.D. White,2012-12-06 Two Symposia on speciation in insects held at the Fourteenth International Congress of Entomology Canberra Australia August 22 30 1972 are included in this volume The first on the more general topic of Genetic Analysis of Speciation Mechanisms includes four papers on speciation in various groups of Diptera and Orthopteroid insects The second symposium was devoted to the topic of Evolution in the Hawaiian Drosophilidae it deals with the explosive speciation of a group of flies with specialized ecological requirements in the complex ecological habitats provided by a recent tropical volcanic archipelago The Hawaiian Symposium organized by Professor D Elmo Hardy is the latest outcome of a major collaborative research project involving over 20 scientists and about 125 technical assistants over a period of ten years Some recent books on evolution have taken the standpoint that the fundamental genetic mechanism of speciation is relatively uniform and stereotyped and in particular that the allopatric model of its geographic component is universally valid Certainly this has been a rather generally accepted viewpoint on the part of students of vertebrate speciation Workers on speciation in insects have tended in general to be less dogmatic and more willing to consider a variety of alternative models of speciation Thus in the present volume several contributions adopt viewpoints which are unorthodox or novel Only time will tell whether their conclusions will turn out to have been soundly based Entomology University of California,1991
