Immunochemistry Vanoss,1994-08-24 This work offers comprehensive coverage of the chemical and physicochemical aspects of immunological interactions as well as the molecules and moieties involved in these interactions It covers in detail the Ag Ab interaction including attraction at a distance between epitope and paratope College or university bookstores may order five or more copies at a special student price available upon request *Cancer Imaging with Radiolabeled Antibodies* David M. Goldenberg,2012-12-06 Where do you begin to look for a recent authoritative article on the diagnosis or management of a particular malignancy The few general oncology text books are generally out of date Single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients Certain general journals frequently publish good in depth reviews of cancer topics and published symposium lectures are often the best overviews available Unfortunately these reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered Cancer Treatment and Research is a series of authoritative volumes that aim to meet this need It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics revised frequently to keep the coverage up to date and easily available on a single library shelf or by a single personal subscription We have approached the problem in the following fashion first by dividing the oncology literature into specific subdivisions such as lung cancer genitourinary cancer pediatric oncology etc and second by asking eminent authorities in each of these areas to edit a volume on the specific topic on an annual or biannual basis Each topic and tumor type is covered in a volume appearing frequently and predictably discussing current diagnosis staging markers all forms of treatment modalities basic biology and more Catalytic Antibodies Sudhir Paul,2000-01-01 This volume addresses fundamental questions concerning the immunological genesis of the catalytic activity in antibodies its relationship with classical antigen binding activity and the biochemical mechanisms involved in catalysis The contents reflect three main challenges in the field i e to delineate the biological functions of catalytic antibodies in autoimmune disease to isolate therapy grade antibody catalysts with sufficient specificity and turnover to permit rapid removal of microbial and tumor antigens and to develop immunogens that recruit immature catalyst producing B cells into the clonal selection pathway and induce adaptive improvements of the catalytic function Well edited and up to date this book reviews the current knowledge in the field and explores ways by which natural and engineered catalytic activities can be harnessed for medical applications It should therefore be of special interest to immunologists biochemists biotechnologists rheumatologists and pathologists
