The Crab Nebula and Related Supernova Remnants Minas C. Kafatos, Richard B. C. Henry, 1985 The Crab Nebula is the single most important supernova remnant in the sky In October 1984 several active researchers compiled this review at a workshop meeting hosted by the George Mason University All recent theoretical and observational work is reviewed This was no mean task because more than a decade has passed since the last international meeting on this object New ideas covered in this volume include the Crab like remnant in the large Magellanic Cloud the MHD model of Crab radiation the jet and IUE and IRAS data The result is an up to date account of the astronomy of this supernova remnant Literature 1985, Part 2 S. Lozinskaya, 1991-11-01 A leading stellar astronomer summarizes our understanding of supernovae and their interaction with interstellar gas including the ambient interstellar medium the gas ejected in the explosion itself and the gas emitted as stellar wind She examines the evolution of supernova remnants as they interact with the gas and considers the role of supernovae and stellar wind in the physical state of the interstellar medium Essential reading for specialists in supernovae and stellar evolution Astrophysics of Gaseous Nebulae and Active Galactic Nuclei Donald E. Ferland, 2006 Thoroughly revised and expanded throughout the new edition is a graduate level text and reference book on gaseous nebulae nova and supernova remnants Much of the new data and new images are from the Hubble Space Telescope with two wholly new chapters being added along with other new features The previous edition which was tried and tested for thirty years has now been succeeded by a revised updated larger edition which will be valuable to anyone seriously interested in astrophysics **Supernovae and Supernova Remnants** International Astronomical Union. Peacock, 2012-12-06 Algol is a triple system containing a 70 hr eclipsing binary K IV and B8 V in a 694 day orbit with an A V star The X ray emission from this system Schnopper et al 1976 is thought to be associated with a corona surrounding the lobe filling and synchronously rotating K IV star This is based on the similarity of the X ray spectrum and luminosity of this system to that of the RS CVn binaries which also contain K sub giants with similar rotation periods and the fact that the luminosity of any coronae surrounding the B8 V and AV companion stars should not be enhanced by rapid rotation Pallavicini et al 1980 White et al 1980 The Einstein SSS measurement showed the X ray spectrum to be two component with 6 7 temperatures of 7 10 K and 3 10 K White et al 1980 As discussed by Swank et al 1981 the problem in understanding stellar coronae in general is how to scale up the solar model to account for the enhanced luminosities The close to 90 degree inclination and similar sizes for the Band K stars of 3 6 and 3 8 R0 respectively make Algol an ideal candidate for an X ray eclipse measurement wherein the size of the X ray emitting coronal structures can be directly measured In this paper we report a

continuous observation through the secondary eclipse of Algol using the EXOSAT Observatory 2      **Supernovae and Supernova Remnants** C.B. Cosmovici, 2012-12-06 This conference is a tribute to those astronomers who pioneered the investigation of this subject such a short time ago and who carried it through to its present state H Arp Concluding Remarks of the Conference A previous conference covering mainly the observational aspects of Supernovae was held at the Haute Provence Observatory in September 1963 In the following ten years this field of research has considerably increased it seemed therefore the right time to organize an international conference on Supernovae taking into account that in the meantime important discoveries such as the Pulsars had been made and new techniques of observation were available This book contains the proceedings of this conference held at Porto Cesareo Lecce Italy during the period May 7 through 11 1973 About one hundred participants from eighteen countries attended the conference It was also the first attempt to hold an international conference in the Salento the southernmost region of Apulia in whose capital Lecce the newly founded Faculty of Sciences of the University of Lecce is located The program of the conference included the results and techniques of Supernova surveys photometric and spectral studies statistics of Supernovae Supernova Remnants and finally theories on Supernovae and Supernova Remnants      Galactic and Extragalactic Radio Astronomy E. Bouton, Gerrit L. Verschuur, Kenneth I. Kellermann, 2012-12-06 Galactic and Extragalactic Radio Astronomy is a fundamental text for graduate students and professional astronomers and covers all aspects of radio astronomy beyond the solar system Each chapter is written by a renowned expert in the field and contains a review of a particular area of radio astronomy and presents the latest observations and interpretations as well as an extensive view of the literature as of 1988 Topics covered include galactic continuum emission HII regions the diffuse interstellar medium interstellar molecules astronomical masers neutral hydrogen the galactic center radio stars supernova remnants pulsars extragalactic hydrogen radio galaxies and quasars the microwave background and cosmological radio sources      *Neutron Stars and Their Birth Events* Wolfgang Kundt, 2012-12-06 This volume is the documentation of the second Course on Neutron Stars Active Galactic Nuclei and Jets held at Erice in September 1988 This second Course was devoted to our knowledge about neutron star sources The poster spoke of pulsars accreting X ray sources and jet engines perhaps also UHE pulsars X ray bursters and black hole candidates Neutron stars have even been proposed as the primary cosmic ray boosters Most of their properties are still controversial such as their birth mechanism neutrino versus magnetic piston internal structure neutrons quarks strange particles magnetic thermal and spin histories wind generation hydrogen versus pair plasma radiation versus centrifugal pressure magnetospheric structure and accretion modes along field lines versus quasi Keplerian The listed controversies have largely survived through the Course and entered into the proceedings Several lecturers speak of magnetic field decay in neutron stars of the recycling of old pulsars and of accretion induced collapse of white dwarfs as though such processes were textbook knowledge Terms and abbreviations like RPSR recycled pulsar spinup line AIC and ADC accretion disk corona help

to foster the assumptions It is not clear to me at this time whether any of these notions has an application to reality
