Animal Testings In Infectiology:

Animal Testing in Infectiology A. Schmidt, Axel Schmidt, O. F. Weber, H. Herwald, 2001-07 Animal testing has a long history and the resulting knowledge has brought about a significant contribution to the improvement of health and welfare of mankind and animals Federal regulations concerning the performance of animal testing have become more restrictive worldwide over the last few decades thus ensuring that only significant tests with a minimum of animal suffering are carried out Apart from fundamental in vitro studies and clinical trials animal testing is still indispensable for research on infectious diseases It offers the opportunity to study the parasitic forms of infectious agents in a complex infection process including the assessment of specific host defense mechanisms Another important setting is the in vivo evaluation of substances in infection models for the development of new anti infective agents The aim of this book is to provide a comprehensive overview of animal testing in the four major fields of infectiology bacteriology virology mycology and parasitology as well as in the development of vaccines New and innovative techniques are introduced and their efficacies critically discussed In addition the book shows ways to refine reduce and replace animal tests in infectiological research and considers ethical aspects of their use A valuable source of information this publication will be of interest to research scientists regulatory agencies veterinarians supervising experimental animals breeders and anyone involved in the public debate on animal testing

Index Medicus ,2001-08 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings **Environmental Health Perspectives** ,1993 **Targeted Intracellular Drug Delivery by Receptor Mediated Endocytosis** Padma V. Devarajan, Prajakta Dandekar, Anisha A. D'Souza, 2019-11-09 This book elaborates on drug delivery targeting via intracellular delivery specifically through the Receptor Mediated Endocytosis RME approach due to the involvement of cellular receptors in various grave diseases Targeted delivery relies on two basic approaches passive and active targeting While passive targeting approaches have shown great promise the improved selectivity achieved with active targeting approaches has resulted in significantly higher efficacy Interestingly there are numerous strategies for active targeting many of which are already highlighted in Targeted Drug Delivery Concepts and Applications Nevertheless an exciting and practical strategy for active targeting which could enable high intracellular delivery is through exploitation of RME Cells in the body express receptors to enable various physiological and biochemical processes As a result many of these receptors are overexpressed in

pathological conditions or newer receptors expressed due to defective cellular functioning RME is based on exploitation of such receptors to achieve intracellular delivery While targeted delivery can have manifold applications in this book we focus on two major and challenging therapeutic areas i Cancer and ii Infectious Diseases Targeted Intracellular Drug Delivery by Receptor Mediated Endocytosis discusses the major receptors that are useful for targeted delivery for these afflictions A major section of this book is dedicated to details regarding their occurrence and location the recognition domain of the receptor structure activity relationship of substrate ligand for selective binding ligands explored antagonists for ligand binding and relevance of these aspects for therapy of cancer and infectious diseases These facets are elucidated with the help of specific examples from academic research and also emphasize commercial products wherever relevant In vitro cellular models relied on for assessing receptor mediated cellular targeting and in vivo models depicting clinical efficacy are focused on in a separate section Finally we briefly discuss the regulatory and toxicity issues that may be associated specifically with the RME approach of intracellular drug delivery

presents a comprehensive review of Human Herpesvirus 6 HHV 6 infects up to 90% of the world's population and can cause
potentially life threatening diseases Clinicians typically do not search for HHV 6 and if they do they will find only few
laboratories providing the necessary diagnostic tests that can differentiate between active and latent infection Adding to this
problem is that scientists still disagree about whether serological or molecular assays will be the best diagnostic test yet
there is no disagreement about the inadequacy of many of the currently existing assays Consequently our knowledge of
etiology and pathogenesis of HHV 6 associated diseases can only come from the combined efforts of clinicians virologists
molecular biologists and pathologists It is the prime task of this book to summarize the status quo of HHV 6 research and to
further stimulate such a collaboration It will be a valuable reference for both clinical and basic scientists including
epidemiologists virologists practicing clinicians and infectiologists pathologists and essentially all scientists entering the field
