Advances and Perspectives in Farm Animal Learning and Cognition Christian Nawroth, Jan Langbein, 2019-10-18. Research on animal learning and cognition has so far mainly focused on a few prominent model species including primates, corvids, and dogs. For years, comparative psychologists and ethologists have been suggesting that more animal species should be considered in comparative cognitive science. The abundance and accessibility of livestock offer an opportunity not merely to extend the comparative approach but also to deepen our knowledge of the mental lives of farm animals. Such approaches also help to assess the needs of farm animals in order to improve their welfare. In recent years, scientific interest in different aspects of farm animal psychology, including emotionality, personality, and cognitive capacities,

has been on the rise proving that farm animals have sophisticated cognitive skills to comprehend and cope with their environment As knowledge of how farm animals perceive and interact with their physical and social environments is crucial for animal welfare the aim of this Research Topic is to promote investigations of farm animal cognitive capacities and their implications for animal welfare related issues We have therefore collected original research and review articles as well as opinion and perspective papers that are distributed among the two hosting magazines Frontiers in Veterinary Science section Animal Behavior and Welfare and Frontiers in Psychology section Comparative Psychology The published articles present state of the art research on farm animal learning and cognition highlight future perspectives in this research area and pinpoint shortcomings and limitations in interpreting current findings They offer new cross disciplinary frameworks e g links between affective states and cognition and discuss the applied implementation of these findings e g cognitive enrichment These contributions will increase our understanding of the cognitive mechanisms that enable farm animals to effectively interact with their environment and pave the way for future cross disciplinary endeavors

Animal Welfare Information Center Newsletter ,1996 The Ethics of Animal Experimentation Donna Yarri,2005-08-18 The ethical treatment of animals has become an issue of serious moral concern Many people are challenging long held assumptions about animals and raising questions about their status and treatment What is the relationship between humans and animals Do animals have moral standing Do we have direct or indirect duties to animals Does human benefit always outweigh animal suffering The use of animals for experimentation raises all of these questions in a particularly insistent way Donna Yarri gives an overview of the current state of the discussion and presents an argument for significantly restricted animal experimentation Pointing to the similarities between humans and animals she argues that the actual differences are differences of degree rather than kind Animal cognition and animal sentience together are the basis for the claim that experimental animals do have rights Examining arguments in the disciplines of ethology philosophy science and theology Yarri makes a case for placing substantial restrictions on animal experimentation Grounding her examination in Christian theology she formulates a more humane approach to animal experimentation She concludes with a concrete burden benefit analysis that can serve as the foundation for informed decision making The Ethics of Animal Experimentation serves as both a handbook of animal rights theory and a practical guide to navigating the complexities of animal experimentation As animal experimentation features in an increasing number of scientific endeavors it is an ethical issue that requires our immediate attention Yarri s unique contribution forges a path toward an ethical practice of animal experimentation NIH Reauthorization and Protection of Health Facilities United States. Congress. House. Committee on Energy and Commerce. Subcommittee on Health and the Environment,1991 **New Perspectives on Human-Animal Interactions** Sarah Knight,Harold Herzog,Rick H. Hoyle,2009-09-01 Animals are important in human psychological and cultural life and our relationships with other species are psychological and morally complicated This special issue presents a series of original research articles concerning

attitudes towards animals the ethics of their treatment the effects of companion animals on human health and psychological well being and the role that culture plays in our interactions with other species The articles illustrate the scope of the new field of human animal relationships the variety of research approaches and the implications of research findings for social policy
