Animals Of The Tropics:

Animal Behavior in the Tropics Shakunthala Sridhara, Akshay Kumar Chakravarthy, Geetha Bali, Rallapalli Ramamurthi, 2025-03-13 This book discusses trends in animal behavior focusing specifically on vertebrates from the tropical region. It includes topics on a wide range of disciplines such as electrophysiology, molecular biology, reproductive physiology, foraging and feeding behavior, chemical ethology, and ecology in situ and ex situ, conservation, circadian rhythms, climate change, and several other related topics that are of high interest and utility. Tropical countries have a unique and diversified fauna across their different biogeographical habitats. This book covers numerous species of vertebrates from the tropical region and also discusses several case studies to provide detailed information about the recent trends in the animal behavior pattern. This book is useful for academicians, researchers, ethologists, wildlife specialists, and practitioners. This book is also an interesting read for scholars, professors, and policy makers involved in the field of zoology, naturalists, and wildlife enthusiasts.

Tropical Animal Health H.S.H Seifert, 1996-06-30 This book *Tropical Animal Health* describes the problems of animal diseases in the tropics in the tropical environment and in relation to particular production systems. In Part I, those basic scientific facts of the special host defence mechanism and of the host pathogen relationship in the tropics which hardly play any part in animal husbandry in temperate climates are explained. Of special importance are the resistance mechanisms of autochthonous breeds and in contrast to them the high susceptibility of exotic breeds in the tropics. It is explained how immuno and chemoprophylaxis can be used as instruments for animal health measures if they are adapted to the socio-economic and ecological conditions of both the tropics and developing countries. Scientific details of immunology are presented as far as they are necessary to understand the epidemiology of tropical diseases and diagnostic techniques for recognizing tropical diseases as well as the execution of prophylactic measures. Vector-borne diseases are the disease complexes most difficult to control since they are bound to the tropical environment thanks to the biology of their vectors. Therefore a special chapter has been dedicated to the description of biology and eradication of vectors of vector-borne diseases. The extent of the description varies according to the importance of the specific vector. The acaricides, insecticides, and alternative methods used to control vectors are discussed in detail. The author has tried to present a world-wide picture but it is not possible to cover every aspect completely.

The Economics of Tropical Farm Management J. P. Makeham, L. R. Malcolm, 1986 In the tropics farmers have to work from a limited resource base which does not lend itself to highly productive crop and animal yields. The principles of farm management economics and the application of farm management analysis and planning can help small farmers in the tropics to produce a bit more from their lots.
