Audio-visuals Relating to Animal Care, Use, and Welfare Jean A. Larson,2000 *Video Techniques in Animal Ecology and Behaviour* S.D. Wratten,2012-12-06 This book is about video techniques not video technology To deal with the latter would be a thankless task as by the time the book was published it would be out of date given the rapid rate of development of video hardware However these technological advances do help to make it an exciting field As Joe Riley says in Chapter 1 Advances in video technology continually produce improvements in performance and reductions in both the cost and size of equipment so it seems certain that the technique will prove to be an even more useful resource in the future In selecting the topics and authors represented in this book I have tried to encompass most of the behavioural and ecological uses to which video is likely to be put over the next decade or so I believe the book has captured the invaluable accumulated experience of the most active practitioners of the medium in this research area The idea for the book arose from two workshops on the use of video in ecology and behaviour held at Southampton University UK during the 1980s Three learned societies were involved in these meetings the Association of Applied Biologists the British Ecological Society and the Society for Experimental Biology **Deadly Harvest Level 6 Audio Cassette Set (3 Cassettes)** Carolyn Walker,2000-03-23 Cambridge English Readers is an exciting new series of original fiction specially written for learners of English Graded into six levels from elementary to advanced the stories in this series provide easy and enjoyable reading on a wide range of contemporary topics and themes Chief Inspector Jane Honeywell is a city detective in a sleepy country town who wonders why she s moved there But then the rural peace and quiet is suddenly disturbed by a particularly horrible murder and Jane starts the dangerous pursuit of the killer or killers The cassette s contain a recording of the full text of the book *Primary Activity Box Book and Audio CD* Caroline Nixon,Michael Tomlinson,2012-11 This photocopiable resource book contains a wide variety of games and activities designed to supplement your coursebook Primary Activity Box contains material designed to be easy to use every activity has clear step by step instructions explaining what you need before class how to set the activity up in the classroom and ideas for optional follow up tasks The Audio CD contains listen and do activities creative dictations and a range of songs rhymes and chants **Breeding for Disease Resistance in Farm Animals** Stephen C. Bishop,Roger F. E. Axford, Frank W. Nicholas, John B. Owen,2010 This new edition provides an updated review of the principles of animal breeding for advanced health and disease resistance Authored by experts it uses examples covering many diseases of importance to livestock production across all major livestock species Topics include techniques and approaches viruses Transmissible Spongiform Encephalopathies TSEs bacteria parasites vectors and broader health issues seen in production systems including metabolic diseases *Foodborne Enterobacteriaceae of Animal Origin: Epidemic Characteristics of Drug Resistance, Pathogenic Mechanisms, and Novel Control Measures* Fangkun Wang,Dongyan Niu,Zhang Wan Jiang,2021-11-25

Analyzing possible intersections in the resistome among human, animal and environment matrices Stefania Stefani, The astonishing development of resistance is one of the most worrisome problems of the last 20 years In particular the accumulation of resistance determinants that are able to destroy different antibiotic families at the same time bringing about multi drug resistant MDR or pan drug resistant PDR phenotypes is a phenomenon almost exclusively known in clinical practice in which resistance is maintained even under a strong selective pressure Mutations acquisition of resistance genes by lateral gene transfer LTG and selection of intrinsically resistant species are at the basis of this diffused problem Many studies have characterized resistant bacteria genes mechanisms of resistance and transfer in clinical settings as well as clarifying the role of antibiotics both naturally produced by microorganisms and by completely synthetic processes in driving the resistant selection the evolution of new mechanisms and the emergence new resistant species However other data until now reported in a rather sporadic way are emerging on the possible role of animals and some specific environmental hot spots ground water soil etc in which resistance can develop thanks to an efficient organization in clusters of genes that are then able to be selected and spread ultimately functioning as a reservoir for further transmission to humans Origin of resistance genes that we now know to belong to the so called mobilome and their mechanism of transferability among species and in different microbiota has to be considered a real challenge for the future evolution and antibiotic resistance in both pathogenic and opportunistic bacteria This Research Topic has the aim of collecting contributions from different experts in the antibiotic resistance field covering aspects of resistance in specific microorganisms and in diverse environments
