Chakanetsa Mavhunga examines how the presence of the tsetse fly turned the forests of Zimbabwe and southern Africa into an open laboratory where African knowledge formed the basis of colonial tsetse control policies. He traces the pestiferous work that an indefatigable mobile insect does through its movements and the work done by humans to control it. Mavhunga's account restores the central role not just of African labor but of African intellect in the production of knowledge about the tsetse fly. He describes how European colonizers built on and beyond this knowledge toward destructive and toxic methods including cutting down entire forests, forced prophylactic resettlement, massive destruction of wild animals, and extensive spraying of organochlorine pesticides. Throughout, Mavhunga uses African terms to describe the African experience, taking vernacular concepts as starting points in writing a narrative of *ruzivo* knowledge rather than viewing Africa through foreign keywords. The tsetse fly became a site of knowledge production, a mobile workshop of pestilence.

Climate Change and Vulnerability and Adaptation Neil Leary, Cecilia Conde, Jyoti Kulkarni, Anthony Nyong, James Adejuwon, Vicente Barros, Ian Burton, Rodel Lasco, Juan Pulhin, 2013-11-05. Sound and solid case studies on vulnerability and adaptation have been woefully lacking in the international discourse on climate change. This set of books begins to bridge the gap. Achim Steiner, UN Under Secretary General and Executive Director of United Nations Environment Programme. Important reading for students and practitioners alike. Martin Parry, Co-Chair Working Group II Impacts, Adaptation, and Vulnerability, Intergovernmental Panel on Climate Change. IPCC fills an important gap in our understanding. It is policy relevant and deserves to be widely read. Richard Klein, Senior Research Fellow, Stockholm Environment Institute, SEI, Sweden. The Intergovernmental Panel on Climate Change (IPCC) concluded in its 2001 report that much of the developing world is highly vulnerable to adverse impacts from climate change. But the IPCC also concluded that the vulnerabilities of developing countries are too little studied and too poorly understood to enable determination of adaptation strategies that would be effective at reducing risks. These authoritative volumes resulting from the work of the Assessments of Impacts and Adaptations to Climate Change (AIACC) project launched by the IPCC in 2002 are the first to provide a comprehensive investigation of the issues at stake. Climate Change and Vulnerability discusses who is vulnerable to climate change, the nature of their vulnerability, and the causes of their vulnerability for parts of the world that have been poorly researched until now. Climate Change and Adaptation covers current practices for managing climate risks to food security, water resources, livelihoods, human health, and infrastructure; needs for effective management of climate risks; the changing nature of the risks; strategies for adaptation; and the need to integrate these strategies into development planning and resource management.

World Resources, 1998-99 World Resources Institute, United Nations Environment Programme, 1998. World Resources 1998-99 focuses on the critical issue of environmental change and human health. have the potential to influence human health on such topics as the intensification of agriculture industrialization and rising energy use As in previous volumes World Resources 1998 99 also looks at the current state of the environment as it relates to population and human well being resources at risk and consumption and waste The book also contains the latest core country data from 157 countries and new information on poverty inequality and food security *Treatise on Water Science*
