the accumulation of misfolded proteins in addition to producing other deleterious events in dopaminergic neurons Neurotoxin based models have been important in elucidating the molecular cascade of cell death in dopaminergic neurons PD models based on the manipulation of PD genes should prove valuable in elucidating important aspects of the disease such as selective vulnerability of substantia nigra dopaminergic neurons to the degenerative process

Parkinson's Disease, Second Edition Ronald F. Pfeiffer, Zbigniew K. Wszolek, Manuchair Ebadi, 2012-10-09 In recent years considerable advances have been made in our knowledge and understanding of Parkinson s disease PD In particular there has been an explosion of information regarding genetic contributions to the etiology of PD and an increased awareness of the importance of the non motor features of the disease Theories regarding the pathogenesis and pathophysiology of PD have also been refined and new treatment modalities and advances implemented Reflecting these changes this second edition features new chapters devoted to genetic aspects of PD non motor features of the disease and aspects of the pathophysiology pathogenesis and treatment of PD
