commercial operations World population is now estimated to be 7.5 billion people with an annual growth rate of nearly 1.5%. Clearly the need to enhance not only the quantity of food produced but its quality has never been greater especially among less developed nations. Genetic manipulation offers the best prospect for achieving that goal. As many fruit crops provide proven health benefits, research efforts need to be focused on improving the nutritional qualities of fruits and vegetables through increased synthesis of lycopene and beta carotene, anthocyanins and some phenolics known to be strong antioxidants. Despite tremendous growth in the area occurring over the past several decades, the work has only just begun. This book represents an effort to address the urgent need to promote those efforts and to mobilise the tools of biotechnical and genetic engineering of the major food crops. Topics covered include: New applications of RNA interference and virus induced gene silencing; VIGS for nutritional genomics in crop plants; Biotechnological techniques for enhancing carotenoid in crops and their implications for both human health and sustainable development; Progress being made in the enrichment and metabolic profiling of diverse carotenoids in a range of fruit crops including tomatoes, sweet potatoes and tropical fruits; Biotechnologies for boosting the phytonutritional values of key crops including grapes and sweet potatoes. Recent progress in the development of transgenic rice engineered to massively accumulate flavonoids in seed. *Phytonutritional Improvement of Crops* is an important text reference that belongs in all universities and research establishments where agriculture, horticulture, biological sciences and food science and technology are studied, taught and applied.

**Centenarians' Autobiographies** Mita Banerjee, 2023-12-18  
Situating at the intersection between medical humanities, aging studies, autobiographical studies, disability studies and ethnic studies, this book explores the fascination of centenarians' autobiographies for humanites research. It can be argued that the growing presence of centenarians' autobiographies on book markets across the globe may be rooted in the public's desire for positive images of aging in contrast to the image of inevitable decay.
