Nuclear Magnetic Resonance G A Webb, 2007-10-31 As a spectroscopic method nuclear magnetic resonance NMR has seen spectacular growth over the past two decades both as a technique and in its applications Today the applications of NMR span a wide range of scientific disciplines from physics to biology to medicine Each volume of Nuclear Magnetic Resonance comprises a combination of annual and biennial reports which together provide comprehensive coverage of the literature on this topic This Specialist Periodical Report reflects the growing volume of published work involving NMR techniques and applications in particular NMR of natural macromolecules which is covered in two reports NMR of Proteins and Nucleic Acids and NMR of Carbohydrates Lipids and Membranes For those wanting to become rapidly acquainted with specific areas of NMR this title provides unrivalled scope of coverage Seasoned practitioners of NMR will find this an invaluable source of current methods and applications Volume 33 covers literature published from June 2002 to May 2003 Specialist Periodical Reports provide systematic and detailed review coverage in major areas of chemical research Compiled by teams of leading authorities in the relevant subject areas the series creates a unique service for the active research chemist with regular in depth accounts of progress in particular fields of chemistry Subject coverage within different volumes of a given title is similar and publication is on an annual or biennial basis

Bioremediation and Sustainability Romeela Mohee, Ackmez Mudhoo, 2012-04-02 Bioremediation and Sustainability is an up to date and comprehensive treatment of research and applications for some of the most important low cost green emerging technologies in chemical and environmental engineering Sustainable development requires the development and promotion of environmental management and a constant search for green technologies to treat a wide range of aquatic and terrestrial habitats contaminated by increasing anthropogenic activities with the main sources of contaminants being the chemical industries Bioremediation is a technique that uses living organisms in order to degrade or transform contaminants into their less toxic forms It is based on the existence of microorganisms with the capacity to attack the compounds on the enzymatic level Bioremediation is an

increasingly popular low cost alternative to conventional methods for treating wastes and contaminated media with the possibility to degrade these contaminants using natural microbial activity mediated by different consortia of microbes Over the last few years the scientific literature has revealed the progressive emergence of various bioremediation techniques Bioremediation and Sustainability presents an up to date and comprehensive collection of chapters prepared in bioremediation technology research and applications The strategies covered in this volume can be applied in situ or ex situ depending on the site in which they will be applied In situ is the treatment done in the site of the contamination and ex situ involves the removal of soil or water to subsequent treatment There is a wide variety of techniques that have been developed in the past and are covered in this volume such as natural attenuation bioaugmentation biostimulation biosorption composting phytoremediation rhizoremediation and bioleaching Advances In Combustion Science W. A.

Sirignano,Aleksandr Grigor'evich Merzhanov,L. De Luca,1997 Molecular Dynamics Lichang Wang,2012-04-05 Molecular Dynamics is a two volume compendium of the ever growing applications of molecular dynamics simulations to solve a wider range of scientific and engineering challenges The contents illustrate the rapid progress on molecular dynamics simulations in many fields of science and technology such as nanotechnology energy research and biology due to the advances of new dynamics theories and the extraordinary power of today s computers This first book begins with a general description of underlying theories of molecular dynamics simulations and provides extensive coverage of molecular dynamics simulations in nanotechnology and energy Coverage of this book includes Recent advances of molecular dynamics theory Formation and evolution of nanoparticles of up to 106 atoms Diffusion and dissociation of gas and liquid molecules on silicon metal or metal organic frameworks Conductivity of ionic species in solid oxides Ion solvation in liquid mixtures Nuclear structures

Advances in Chemical Physics, Volume 52 Ilya Prigogine,Stuart A. Rice,2009-09-08 The Advances in Chemical Physics series provides the chemical physics and physical chemistry fields with a forum for critical authoritative evaluations of advances in every area of the discipline Filled with cutting edge research reported in a cohesive manner not found elsewhere in the literature each volume of the Advances in Chemical Physics series serves as the perfect supplement to any advanced graduate class devoted to the study of chemical physics List of Journals Indexed in Index Medicus National Library of

Medicine (U.S.),2004 Issues for 1977 1979 include also Special List journals being indexed in cooperation with other institutions Citations from these journals appear in other MEDLARS bibliographies and in MEDLING but not in Index medicus Laser Techniques in Luminescence Spectroscopy Tuan Vo-Dinh,1990 **Introduction to Analytical Electron Microscopy** John Hren,2013-11-11 The birth of analytical electron microscopy AEM is somewhat obscure Was it the recognition of the power and the development of STEM that signaled its birth Was AEM born with the attachment of a crystal spectrometer to an otherwise conventional TEM Or was it born earlier with the first analysis of electron loss spectra It s not likely that any of these developments alone would have been sufficient and there have been many others microdiffraction

EDS microbeam fabrication etc that could equally lay claim to being critical to the establishment of true AEM It is probably more accurate to simply ascribe the present rapid development to the obvious a combination of ideas whose time has come Perhaps it is difficult to trace the birth of AEM simply because it remains a point of contention to even define its true scope For example the topics in this book even though very broad are still far from a complete description of what many call AEM When electron beams interact with a solid it is well known that a bewildering number of possible interactions follow Analytical electron microscopy attempts to take full qualitative and quantitative advantage of as many of these interactions as possible while still preserving the capability of high resolution imaging Although we restrict ourselves here to electron transparent films much of what is described applies to thick specimens as well Not surprisingly signals from all possible interactions cannot yet and probably never will be attained simultaneously under optimum conditions

Survey of Sampling-based Methods for Uncertainty and Sensitivity Analysis Jon C. Helton, C. B. Storlie, 2006 *Physical Adsorption* L.W. Bruch, Milton W. Cole, Eugene Zaremba, 2007-03-29 A comprehensive account of the phenomena that occur when simple gases interact with surfaces this text takes a fundamental perspective Physical adsorption involves atomic or molecular films bound to surfaces by less than 0.5 eV per particle Physically adsorbed thin films exhibit remarkably diverse properties and behave in a manner characteristic of two dimensional matter This exploration focuses on monolayer physics emphasizing atomic rather than molecular adsorption The phase diagrams of physically adsorbed films are diverse and rich in structure because of the subtle and varied competition between the two interactions the mutual interaction between adsorbed molecules and the force binding each molecule to the surface The authors explain the microscopic origin of these forces in terms of constituent electrons and nuclei They then examine the structural and dynamical properties of these films in the context of atomic and solid state physics statistical mechanics and computer simulations This text will be of interest to research chemists physicists and engineers alike as well as students in these fields Key literature citations allow readers to trace important developments and thought provoking problems are addressed in detail

The Supercontinuum Laser Source Robert R. Alfano, 2016-02-10 This is the third edition of a well known classic on ultrafast nonlinear and linear processes responsible for supercontinuum generation Part I of the book reviews the progress achieved in experimental and theoretical understanding of the field and goes over the applications developed since the discovery of the supercontinuum effect The second part of the book covers recent research activity on supercontinuum phenomena and advances achieved since the publication of the previous edition The new chapters specifically focus on normal dispersion photonic band gap fibers coherence in the supercontinuum supercontinuum in the UV NIR and IR and supercontinuum in XUV and X rays for attosecond pulses The Supercontinuum Laser Source is a definitive work by one of the discoverers of the white light effect It is indispensable reading for any researcher or student working in the field of ultrafast laser physics

Blue Carbon Reservoir of the Blue Planet Abhijit Mitra, Sufia Zaman, 2014-11-20 The ever increasing emission of carbon dioxide due to rapid industrialization urbanization unplanned tourism and alteration of land use pattern is causing unprecedented changes to marine biodiversity Irrespective of political philosophy nation caste sex and religion mankind is under the appalling shadow of climate change Today nature based approaches for the mitigation of climate change are increasingly accepted as part of the low cost solution Thrust has been given by several scientific communities to assess the magnitude and viability of carbon sequestering potential of plants Coastal producer communities like mangroves salt marsh grass seagrass beds and seaweeds absorb atmospheric carbon dioxide during the process of photosynthesis This carbon known as the blue carbon is thus associated with the marine and estuarine ecosystems However a number of gaps in our scientific knowledge on blue carbon domain still exist Molluscs coral reefs phytoplankton which are amongst the important storehouses of carbon have not been addressed Very few scientific studies on the carbon stored in these valuable natural vaults have been performed and no data bank is available on their carbon sequestering capacity on global basis The methodologies for assessing blue carbon stock also need further standardization so that credit from blue carbon reservoir is accepted by the International bodies in the form of a concrete policy It is a matter of great appreciation that Conservation International CI the International Union for Conservation of Natural Resources IUCN and the Intergovernmental Oceanic Commission IOC of UNESCO is collaborating with governments research institutions non governmental and international organizations and communities around the world to develop management approaches financial incentives and policy mechanisms for ensuring conservation and restoration of blue carbon ecosystems and implement projects around the world that demonstrate the feasibility of blue carbon accounting management and incentive agreements The present book has critically presented the data bank for each community of blue carbon not merely in the form of text description but also through case studies that are the outcomes of research projects and pilot programmes

Biogas Production Ackmez Mudhoo, 2012-05-01 Biogas Production covers the most cutting edge pretreatment processes being used and studied today for the production of biogas As an increasingly important piece of the energy pie biogas and other biofuels are being used more and more around the world in every conceivable area of industry and could be a partial answer to the energy problem and the elimination of global warming This book will highlight the recent advances in the pretreatment and value addition of lignocellulosic wastes LCW with the main focus on domestic and agro industrial residues Mechanical physical and biological treatment systems are brought into perspective The main value added products from lignocellulosic wastes are summarized in a manner that pinpoints the most recent trends and the future directions Physico chemical and biological treatment systems seem to be the most favored options while biofuels biodegradable composites and biosorbents production paint a bright picture of the current and future bio based products Engineered microbes seem to tackle the problem of bioconversion of substrates that are otherwise nonconvertible by

conventional wild strains Although the main challenge facing LCW utilization is the high costs involved in treatment and production processes some recent affordable processes with promising results have been proposed Future trends are being directed to nanobiotechnology and genetic engineering for improved processes and products *Current Science* ,1988
