Annual Review Of Biochemistry Volume 52 1983:

Annual Review of Psychology Calvin Perry Stone, 1986 Publishes original critical reviews of the significant literature and current developments in psychology **Annual Review of Physiology** James Murray Luck, Victor E. Hall, 1984

Radioimmunoassay in Basic and Clinical Pharmacology Carlo Patrono, Bernhard A. Peskar, 2012-12-06 Thirty years have elapsed since the first description by S A BERSON and R S YALOW of the basic principles of radioimmunoassay RIA During this period of time RIA methodology has been instrumental to the growth of many areas of biomedical research including endocrinology oncology hematology and pharmacology It has done so by providing a relatively simple universal tool allowing for the first time the detection of endogenous mediators that are present in body fluids at concentrations as low as 10^{-10} M The fundamental nature of this discovery and the wide ranging fall out of basic and clinical knowledge derived from its application have been acknowledged by the many honors tributed to its pioneers including the Nobel Prize awarded to Dr YALOW 10 years ago Although several excellent books have been published during the past decades covering various aspects of RIA methodology we felt the need as pharmacologists for a comprehensive discussion of the methodological and conceptual issues related to the main classes of mediators of drug action and to drugs themselves Thus we gladly accepted the challenge provided by the invitation to edit a volume of the Handbook of Experimental Pharmacology on Radioimmunoassay in Basic and Clinical Pharmacology We tried to balance the emphasis placed on more general aspects of the RIA methodology and that on specific mediators **Annual Review of Genetics** Herschel L. Roman, 1982 Publishes original critical reviews of the significant literature and current development in genetics **Annual Review of Immunology**, 1986 **Proliferative Vitreoretinopathy (PVR)** H. MacKenzie Freeman, Felipe I. Tolentino, 2012-12-06 The purpose of this book is to provide an update both on the present management of proliferative vitreoretinopathy PVR and on clinical and experimental research being done to control this disease The book is divided into three parts The first part deals with the current management of PVR The Retina Society Classification of PVR is based in part on a gradation of severity from minimal to massive therefore this book attempts to correlate the management of PVR with its severity The treatment of PVR of varying degrees of severity from mild to the most severe form is described by those authors with extensive experience with this spectrum of cases Much progress has been made in the management of severe PVR as a result of vitreous injections vitrectomy periretinal membrane surgery and retinal surgery Authors in this book show that in mild and moderately severe PVR excellent results can be obtained with techniques that are less invasive and possibly less likely to stimulate further abnormal cellular proliferation The new modalities for treatment of PVR are discussed by authors having extensive experience with them The current status of pharmacological treatment and new concepts of the pathobiology of PVR are discussed The second part of the book deals with questions frequently encountered in the management of PVR These questions are answered by a panel of experts including Gary W Abrams Steven T Charles William H Havener Robert

Machemer Charles L Schepens and Walter H Stern Medical Virology David O White, Frank J. Fenner, 2016-06-03 Medical Virology Nutritional Intervention in the Aging Process H.J. Armbrecht, J.M. Prendergast, R.M. Coe, 2012-12-06 There has been much popular and scientific interest in the fields of nutrition and aging in recent years As the importance of proper nutrition in children and young adults becomes more fully understood it is natural to wonder if proper nutrition could play a similar role in later life Recent research has indicated that nutrition can potentially intervene in the aging process in at least two ways First studies in animals and humans have shown that nutrition can be used to improve functional status which in turn is related to perceived quality of life Second nutritional manipulation has been used to extend maximal life span in laboratory animals How these interesting findings apply to the human situation remains to be explored The purpose of this book is twofold The first is to present recent advances in our basic knowledge of how nutrition and aging interact with each other The second is to discuss some applications of this knowledge to the care of the elderly patient The interaction between aging and nutrition is complex because each may act on the other in either a synergistic or antagonistic fashion Aging may alter the nutritional status of the elderly by affecting the way nutrients are absorbed and utilized by the body Aging may also influence food intake and therefore nutritional status by decreasing the palatability of food The environment of the elderly may change so they are less likely to eat well balanced meals Current Topics in Cellular Regulation Bernard L. Horecker, Earl R. Stadtman, 2014-06-28 Current Topics in Cellular Regulation Volume 28 is a collection of papers that deals with enzyme enzyme interactions regulation of metabolic reaction pathways the relevance of intracellular amino acid pool in the regulation of protein metabolism and the production of superoxide by phagocytic leukocytes Other papers discuss the regulation of adrenergic receptor function by phosphorylation a membrane bound metallo endopeptidase meprin as well as the covalent modification as a mechanism of marking proteins for degradation One paper notes that the transfer pathway involving enzyme enzyme recognition is associated with molecular specificity features over those demanded by the molecular structural constraints of the individual enzyme sites The Alberly and Knowles principle under certain conditions shows that intermediary metabolites within a particular pathway exist in states of nearly equal free energy One paper describes that the amino acid pool size and content are governed by the conditioning of intracellular proteins and the metabolic activity of the cell The paper also suggests that intracellular pools do not regulate protein metabolism The collection can prove beneficial for biochemists microbiologists cellular researchers and academicians involved in the study of cellular biology or physiology

Biochemistry Trudy McKee, James Robert McKee, 2020 Biochemistry The Molecular Basis of Life is an intermediate one semester text written for students on degree pathways in Chemistry Biology and other Health and Life Sciences Designed for students who need a solid introduction to biochemistry but are not specializing in the subject the text focuses on essential biochemical principles that underpin the modern life sciences and offers the most balanced coverage of chemistry and biology of any text on the market The text equips students with a complete view of the living state emphasizes problem

solving and applies biochemical principles to the fields of Health Agriculture Engineering and Forensics to show students the relevance of their learning McKee and McKee is respected for its balance of biology and chemistry consistently placing biochemical principles into the context of the physiology of the cell and biomedical applications

Interrelationship Among Aging, Cancer and Differentiation A. Pullman, Paul O.P. Ts'O, Edward L. Schneider, 2012-12-06 In 1980 a distinguished group of scientists gathered in Washington D C for an International Symposium on Aging and Cancer Among the recommendations of this Symposium was to convene a future meeting to discuss the molecular basis for Interrelationships between aging and cancer when the appropriate scientific knowledge was available That same year the 13th Jerusalem Symposium on Quantum Chemistry and Biochemistry entitled Carcinogenesis Fundamental Mechanisms and Environmental Effects was held attended by some 50 International authorities In this field At this meeting It became clear that the fundamental process of carcinogenesis is intimately associated with differentiation which must also be mechanistically related to aging It was therefore proposed that the next Jerusalem Symposium on Cancer could provide the appropriate forum for the study on the Interrelationship among cancer aging and differentiation The Impressive advances in our knowledge of the nature of the genome through molecular genetic and physical chemical techniques have now provided the opportunity to examine the Interrelationships between these complex biological processes Through the Isolation cloning and rearranging of genes we are able to dissect and manipulate the genome in a fashion that was unanticipated only a decade ago At the same time the Increase in longevity and the Increased numbers of individuals entering the last decades of life where cancer Incidences are highest raise the profound and practical question of whether aging and cancer are linked through common mechanisms
