the need for effective communication between investigators gains in imperative. It is vital to forge links among sub disciplines and to emphasise the complementary nature of results observed by different biophysical methods. This publication contains the review lectures given at a meeting on Current Methods in Structural Molecular Biology sponsored by NATO as an Advanced Study Institute and by FEBS's Advanced Course No 78. The aim of the meeting was to bring together in a teaching environment students and specialists in diverse biophysical methodologies with the specific purpose of exploring questioning and critically assessing the present and future state of biological structure research. The scientific content of the interdisciplinary Study Institute centred around three interrelated aspects: biophysical methods and instrumentation; their application to biological structure problems; and derivation of structural information and insights.
