Digital Media Usage Across the Life Course Paul G. Nixon, Rajash Rawal, Andreas Funk, 2016-06-23 New York Times columnist Thomas Friedman declared the modern age in which we live as the age of distraction in 2006 The basis of his argument was that technology has changed the ways in which our minds function and our capacity to dedicate ourselves to any particular task Others assert that our attention spans and ability to learn have been changed and that the use of media devices has become essential to many people's daily lives and indeed the impulse to use technology is harder to resist than unwanted urges for eating alcohol or sex This book seeks to portray the see-saw like relationship that we have with technology and how that relationship impacts upon our lived lives Drawing on a range of theoretical perspectives that cross traditional subject boundaries we examine the ways in which we both react to and are to an extent shaped by the technologies we interact with and how we construct the relationships with others that we facilitate

,1975 **Get the Picture** John Godfrey Morris, John G. Morris, 2002-06-15 How do photojournalists get the pictures that bring us the action from the world's most dangerous places How do picture editors decide which photos to scrap and which to feature on the front page Find out in *Get the Picture* a personal history of fifty years of photojournalism by one of the top journalists of the twentieth century John G Morris brought us many of the images that defined our era from photos of the London air raids and the D Day landing during World War II to the assassination of Robert Kennedy He tells us the inside stories behind dozens of famous pictures like these which are reproduced in this book and provides intimate and revealing portraits of the men and women who shot them including Robert Capa Henri Cartier Bresson and W Eugene Smith A firm believer in the power of images to educate and persuade Morris nevertheless warns of the tremendous threats posed to photojournalists today by increasingly chaotic wars and the growing commercialism in publishing the siren song of money that leads editors to seek pictures that sell copies rather than those that can change the way we see the world **New Reproductive Technologies and Disembodiment** Carla Lam, 2016-04-22 With attention to the ways in which new reproductive technologies facilitate the gradual disembodiment of reproduction this book reveals the paradox of women's reproductive experience in patriarchal cultures as being both and often simultaneously empowering and disempowering A rich exploration of birth appropriation in the West *New Reproductive Technologies and Disembodiment* investigates the assimilation of women's embodied power into patriarchal systems of symbolism culture and politics through the inversion of women's and men's reproductive roles Contending that new reproductive technologies represent another world historical moment both in their forging of novel social relations and material processes of reproduction and their manner of disembodiment of women in unprecedented ways a disembodiment evident in recent visual and literary popular and academic texts this volume locates the roots of this disembodiment in western political discourse A call to feminist political theory to re remember the material dimensions of bodies and their philosophical significance *New Reproductive Technologies and Disembodiment* will appeal to scholars of sociology gender studies political and social theory and the study of science technology and health **Imaging and Imagining the Fetus** Malcolm Nicolson, John E. E. Fleming, 2013-02-15 How engineers and clinicians developed the ultrasound diagnostic scanner and how its use in obstetrics became controversial To its proponents the ultrasound scanner is a safe reliable and indispensable aid to diagnosis Its detractors on the other hand argue that its development and use are driven by the technological enthusiasms of doctors and engineers and the commercial interests of manufacturers and not by concern to improve the clinical care of women In some U S states an ultrasound scan is now required by legislation before a woman can obtain an abortion adding a new dimension to an already controversial practice *Imaging and Imagining the Fetus* engages both the development of a modern medical technology and the concerted critique of that technology Malcolm

Nicolson and John Fleming relate the technical and social history of ultrasound imaging from early experiments in Glasgow in 1956 through wide deployment in the British hospital system by 1975 to its ubiquitous use in maternity clinics throughout the developed world by the end of the twentieth century. Obstetrician Ian Donald and engineer Tom Brown created ultrasound technology in Glasgow where their prototypes were based on the industrial flaw detector, an instrument readily available to them in the shipbuilding city. As a physician, Donald supported the use of ultrasound for clinical purposes, and as a devout High Anglican, he imbued the images with moral significance. He opposed abortion decisions about which were increasingly guided by the ultrasound technology he pioneered, and he occasionally used ultrasound images to convince pregnant women not to abort the fetuses they could now see. *Imaging and Imagining the Fetus* explores why earlier innovators failed where Donald and Brown succeeded. It also shows how ultrasound developed into a black box technology whose users can fully appreciate the images they produce but do not and have no need to understand the technology any more than do users of computers. These images of the fetus may be produced by machines, the authors write, but they live vividly in the human imagination.

An Artistic Autoethnography on the Public Fetus Anna Gonzalez Suero, 2024-11-11 *An Artistic Autoethnography on the Public Fetus* explores artistic work with the iconic image of the fetus and the personal consequences of the image by analyzing the so-called public fetus within a feminist approach. This book develops a deeply interdisciplinary body of research engaging with feminist debates on reproductive technology and imagery, art theory, visual histories of anatomical imagery, cultural critiques of the myth of the artistic genius, Gestalt understandings of perception and memory, and anthropological theories of liminality. Through blurring the artistic with the scientific, it explores the potential of autoethnography to serve as a form of conscious raising through which to create new images and stories that counter the public fetus in support of reproductive autonomy and social justice. This book will be useful to feminist scholars who work with issues related to gender, reproduction, sexuality, and autoethnography. At the same time, the book will be of value to undergraduate and graduate students in gender studies as an example of how an autoethnographic process can make unrecognized experiences of gender known to a person.
