Bachmans Warbler A Species In Peril:

Bachman's Warbler, a Species in Peril Paul B. Hamel, 1986 This work was intended originally to be simply a bibliography in which all sources were presented and listed under appropriate subject headings where disagreements or other circumstances necessitated works were to be cross referenced to each other Recent reviewers have urged a more active authorship in which I evaluated the literature and identified important issues concerning the species This I have done with some trepidation but also with enthusiasm Where my own researches have yielded new ideas or summaries I present them as well The work comprises two Parts 1 an introductory discussion of the biology and history of the birds and 2 a list of publications that mention the species The first Part is a brief introduction to and analysis of the literature dealing with the biology and history of Bachman's Warbler Certain works cited in the introduction do not mention the species Such citations are marked by asterisks and the works are listed in a separate Literature Cited section that accompanies Part 1 Part 2 constitutes the bibliography of the species in which works are listed in two ways First is an alphabetical listing by author of papers that treat the Bachman's Warbler Second is a listing by subject categories The subject classifications are patterned loosely after those employed in recent volumes of the Zoological Record Subject classifications in Part 1 and the subject heading section of Part 2 are labelled the same to enable ready comparison I provided many categories so that works might be referenced as specifically as possible Readers expecting each reference to contain a substantial amount of information must be patient however information about this very rare species is far more often recorded in phrases than in paragraphs

Bird Conservation International Special Issue: Neotropical Migrants Eugene S. Morton, Kimberley Young, Mario A. Ramos, 1994-08-04 Special issue of Bird Conservation International a quarterly peer reviewed journal focusing on the conservation of birds and their habitats Status and Management of Neotropical Migratory Birds Deborah M. Finch, Peter W. Stangel, 1993 Neotropical Migratory Birds Richard DeGraaf, John Rappole, 2019-06-07 Thrushes warblers vireos and tanagers are probably the most familiar of the Neotropical migrants birds that breed in the United States and Canada then journey to spend the winter in the Caribbean Mexico or southward But this extraordinary group actually comprises a large number of diverse species including waterfowl shorebirds terns hawks flycatchers and hummingbirds In their compendious review of information on these birds Richard M DeGraaf and John H Rappole illuminate the need for a thorough understanding of the ecology of each species one that extends throughout the entire life cycle The authors argue convincingly that conservation efforts must be based on such an understanding and carried out across a species range not limited to the breeding grounds This book is the first to summarize in one volume much needed practical data about the distribution and breeding habitat requirements of migratory birds in North and South America The body of the book consists

of natural history accounts of more than 350 species of Neotropical migrants including a brief description of each bird's range, status, habitats, breeding grounds, nest site, and wintering areas. The authors provide a complete range map of each species' distribution in the Western Hemisphere as well as notes on the distribution's basic data that until recently have largely been unavailable in usable form to ornithologists and land and resource managers. An appendix lists species that are increasing or decreasing at significant rates in various physiographic regions of North America. **Holocene Extinctions**

Sam Turvey, 2009-05-28 This makes a detailed consideration of these extinctions a useful system for investigating the impacts of human activity over time. **Tropical Forest Ecology and Management for the Anthropocene** Grizelle González, Ariel

E. Lugo, 2019-12-18 This Special Issue looks forward as well as backward to best analyze the forest conservation challenges of the Caribbean. This is made possible by 75 years of research and applications by the United States Department of Agriculture, International Institute of Tropical Forestry, the Institute of Puerto Rico. It transforms Holocene-based scientific paradigms of the tropics into Anthropocene applications and outlooks of wilderness, managed forests, and urban environments. This volume showcases how the focus of the Institute's programs is evolving to support sustainable tropical forest conservation despite uncertain conditions. The manuscripts showcased here highlight the importance of shared stewardship and a long-term hands-on approach to conservation research programs and novel organizations intended to meet contemporary conservation challenges. Policies relevant to the Anthropocene as well as the use of experiments to anticipate future responses of tropical forests to global warming are reexamined in these pages. Urban topics include how cities can co-produce new knowledge to spark sustainable and resilient transformations. Long-term results and research applications of topics such as soil biota, migratory birds, tropical vegetation, substrate chemistry, and the tropical carbon cycle are also described in the volume. Moreover, the question of how to best use land on a tropical island is addressed. This volume is intended to be of interest to all actors involved in long-term sustainable forest management and research in light of the historical lessons and future directions that may come out of a better understanding of tropical cities and forests in the Anthropocene epoch. Ecology and Management of Neotropical Migratory Birds Deborah M. Finch, Thomas E. Passion for Birds Mark V. Barrow, Jr., 2021-08-10 In the decades following the Civil War as industrialization urbanization and economic expansion increasingly reshaped the landscape many Americans began seeking adventure and aesthetic gratification through avian pursuits By the turn of the century hundreds of thousands of middle and upper class devotees were rushing to join Audubon societies purchase field guides and keep records of the species they encountered in the wild Mark Barrow vividly reconstructs this story not only through the experiences of birdwatchers collectors conservationists and taxidermists but also through those of a relatively new breed of bird enthusiast the technically oriented ornithologist In exploring how ornithologists struggled to forge a discipline and profession amidst an explosion of popular interest in natural history *A Passion for Birds* provides the first book length history of American ornithology from the death of John James Audubon to the Second World War Barrow shows how efforts to form a scientific community distinct from popular birders met with only partial success The founding of the American Ornithologists Union in 1883 and the subsequent expansion of formal educational and employment opportunities in ornithology marked important milestones in this campaign Yet by the middle of the twentieth century when ornithology had finally achieved the status of a modern profession its practitioners remained dependent on the services of birdwatchers and other amateur enthusiasts Environmental issues also loom large in Barrow's account as he traces areas of both cooperation and conflict between ornithologists and wildlife conservationists Recounting a colorful story based on the interactions among a wide variety of bird lovers this book will interest historians of science environmental historians ornithologists birdwatchers and anyone curious about the historical roots of today's birding boom

The Diversity of Life Edward O. Wilson, 1992 View a collection of videos on Professor Wilson entitled *On the Relation of Science and the Humanities* In the Amazon Basin the greatest violence sometimes begins as a flicker of light beyond the horizon There in the perfect bowl of the night sky untouched by light from any human source a thunderstorm sends its premonitory signal and begins a slow journey to the observer who thinks the world is about to change Watching from the edge of the Brazilian rain forest witness to the sort of violence nature visits upon its creatures Edward O. Wilson reflects on the crucible of evolution and so begins his remarkable account of how the living world became diverse and how humans are destroying that diversity Wilson internationally regarded as the dean of biodiversity studies conducts us on a tour through time traces the processes that create new species in bursts of adaptive radiation and points out the cataclysmic events that have disrupted evolution and diminished global diversity over the past 600 million years The five enormous natural blows to the planet such as meteorite strikes and climatic changes required 10 to 100 million years of evolutionary repair The sixth great spasm of extinction on earth caused this time entirely by humans may be the one that breaks the crucible of life Wilson identifies this crisis in countless ecosystems around the globe coral reefs grasslands rain forests and other natural habitats Drawing on a variety of examples such as the decline of bird populations in the United States the extinction of many species of freshwater fish in Africa and Asia and the rapid disappearance of flora and fauna as the rain

forests are cut down he poignantly describes the death throes of the living world's diversity projected to decline as much as 20 percent by the year 2020. All evidence marshaled here resonates through Wilson's tightly reasoned call for a spirit of stewardship over the world's biological wealth. He makes a plea for specific actions that will enhance rather than diminish not just diversity but the quality of life on earth. Cutting through the tangle of environmental issues that often obscure the real concern, Wilson maintains that the era of confrontation between forces for the preservation of nature and those for economic development is over; he convincingly drives home the point that both aims can and must be integrated. Unparalleled in its range and depth, Wilson's masterwork is essential reading for those who care about preserving the world's biological variety and ensuring our planet's health.

Bird-habitat Relationships on Southeastern Forest Lands, 1982 **Where Have All the Birds Gone?** John Terborgh, 2020-10-06

Things are going wrong with our environment, writes John Terborgh, even the parts of it that are nominally protected. If we wait until all the answers are in, we may find ourselves in a much worse predicament than if we had taken notice of the problem earlier. By waiting, one risks being too late; on the other hand, there can be no such thing as being too early. Terborgh's warnings are essential reading for all who care about migratory birds and our natural environment. Why are tropical migrant species disappearing from our forests? Can we save the birds that are left? Terborgh takes a more comprehensive view of migratory birds than is usual by asking how they spend their lives during the half year they reside in the tropics. By scrutinizing ill-planned urban and suburban development in the United States and the tropical deforestation of Central and South America, he summarizes our knowledge of the subtle combination of circumstances that is devastating our bird populations. This work is pervaded by Terborgh's love for the thrushes, warblers, vireos, cuckoos, flycatchers, and tanagers that inhabited his family's woodland acreage while he was growing up; birds that no longer live there in spite of the preservation of those same woods as part of a county park. The book is a tour of topics as varied as ecological monitoring, the plight of the Chesapeake wetlands, the survival struggle of Central American subsistence farmers, and the management of commercial forests.
