Backbone of the Americas Suzanne Mahlburg Kay, Víctor A. Ramos, William R. Dickinson, 2009 The American Cordilleras form a continuous orogen that extends for 12 500 km along the eastern flank of the Pacific Ocean from Arctic to Antarctic latitudes as an integral part of the circum Pacific orogenic belt Following two summary chapters on the overall anatomy and evolution of North and South American segments of the orogenic system this volume includes ten seminal chapters dealing with salient aspects of the key geodynamic processes that have accompanied Cordilleran geotectonic evolution forearc terrane accretion arc magmatism shallow subduction and backarc intracontinental deformation The papers in this volume were selected from those presented at the 2006 Backbone of the Americas Meeting which was sponsored jointly by multiple North and South American geological societies in Mendoza Argentina pub desc **The Tectonics of North America** Philip B. Backbone of the Americas American Association of Petroleum Geologists, 1963 *Evolutionary Biology of the New World Monkeys and Continental Drift* Russell L. Ciochon, 2013-12-01 It is now well known that the concept of drifting continents became an established theory during the 1960s Not long after this revolution in the earth sciences researchers began applying the continental drift model to problems in historical biogeography One such problem was the origin and dispersal of the New World monkeys the Platyrrhini Our interests in this subject began in the late 1960s on different continents quite independent of one another in the cities of Florence Italy and Berkeley California In Florence in 1968 A B Chiarelli through stimulating discussions with R von Koenigswald and B de Boer became intrigued with the possibility that a repositioning of the continents of Africa and South America in the early Cenozoic might alter previous traditional conceptions of a North American origin of the Platyrrhini During the early 1970s this concept was expanded and pursued by him through discussions with students while serving as visiting professor at the University of Toronto By this time publication of the *Journal of Human Evolution* was well underway and Dr Chiarelli as editor encouraged a dialogue emphasizing continental drift models of primate origins which culminated in a series of articles published in that journal during 1974-75 In early 1970 while attending the University of California at Berkeley R L Ciochon was introduced to the concept of continental drift and plate tectonics and their concomitant applications to vertebrate evolution through talks with paleontologist W A Clemens and anthropologist S L Washburn *Cenozoic Tectonics and Regional Geophysics of the Western Cordillera* Robert Baer Smith, Gordon P. Eaton, 1978-06-01 The March 5, 1987, Ecuador Earthquakes National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Committee on Natural Disasters, 1991-02-01 This book provides an account of the 1987 Ecuador earthquakes evaluating the physical phenomena involved and the performance of structures and systems It identifies and recommends cases where an in depth study would contribute to improvement of our ability to analyze and forecast such failures and our preparedness warning rescue recovery and rehabilitation systems The volume also describes how state of the art knowledge can be applied to improve public safety and welfare Energy and Mineral Potential of the Central American-Caribbean Region Ralph L. Miller, Gregorio Escalante, John A. Reinemund, Marion J. Bergin, 2012-12-06 Energy and Mineral Potential of the Central American Caribbean Region is a compilation of the latest results in this area It covers topics such as petroleum resources coal resources geothermal resources metallic minerals industrial minerals hydrology and environmental problems and geologic hazards The volume is of special interest to scientists working in this region and to those who would like to obtain an overview of the resource potential **The Tectonic Setting and Origin of Cretaceous Batholiths within the North American Cordillera** Robert S. Hildebrand, Joseph B. Whalen, 2017-10-03 In this Special Paper Hildebrand and Whalen present a big picture paradigm busting synthesis that examines the tectonic setting temporal relations and geochemistry of many plutons within Cretaceous batholithic terranes of the North American Cordillera In addition to their compelling tectonic synthesis

they argue that most of the batholiths are not products of arc magmatism as commonly believed but instead were formed by slab failure during and after collision. They show that slab window and Precambrian TTG suites share many geochemical similarities with Cretaceous slab failure rocks. Geochemical and isotopic data indicate that the slab failure magmas were derived dominantly from the mantle and thus have been one of the largest contributors to growth of continental crust. The authors also note that slab failure plutons emplaced into the epizone are commonly associated with Cu-Au porphyries as well as Li-Cs-Ta pegmatites.
