Carps David Hoole, Dieter Steinhagen, Verena Jung-Schroers, Mikolaj Adamek, 2025-04-09 The prominence of the carp group of fish is widely recognised in three important economic areas food production recreation and the ornamental market Carp species thus represent over 50% of world fish production and are

vital to the economic stability of several countries and global regions. It is therefore crucial that the health of these cultured aquatic species is properly considered and maintained to ensure the sustainability of production and recent disease epidemics for example grass carp reovirus infections in China and koi herpesvirus disease in Asia and Europe have caused widespread and devastating effects on the aquaculture industries. This book thus examines how the diseases of carp species can be properly identified, monitored, treated and prevented. It specialises on the most prominent globally occurring carp species such as *Cyprinus carpio* common carp, the *Carassius* species and the carp species that predominate in Europe and Asia such as *Ctenopharygodon idellus* grass carp, *Hypophthalmichthys molitrix* silver carp and *Hypophthalmichthys nobilis* bighead carp. It also looks at the more specialised production of certain species for example *Catla catla* Catla and *Labeo rohita* Roho in the Indian subcontinent. This user friendly book presents a practical approach to disease diagnosis and treatment that covers both infectious and non infectious diseases.

Aquatic Animal Health Management Rajendran Kooloth Valappil, Iddya Karunasagar, Indrani Karunasagar, 2025-08-31. This book covers detailed accounts of viral, bacterial and fungal diseases affecting shrimp, finfish and molluscan aquaculture. It also discusses different aquatic animal health management measures such as disease diagnostics, biosecurity, bioremediation and application of probiotics, antibiotics and vaccines. Further, the book provides information on the roles of genetics and genomics, disease surveillance, aquatic animal health policies and the effects of climate change in aquaculture. The book is structured into five sections: i Pathogens and Diseases of Finfish, ii Pathogens and Diseases of Shellfish, iii Aquatic Animal Health and Environment, iv Health Management in Aquaculture and v Aquatic Animal Health Policy and Regulations. Aquaculture plays a pivotal role in food and nutritional security, export earnings and the livelihood of millions of people globally. However, aquatic animal diseases have been a major limiting factor in sustainable aquaculture production in terms of economic losses caused by mass mortality and morbidity. In order to combat these endemic and emerging diseases, researchers are formulating strategies to mitigate the negative impact of diseases by understanding the pathogens, hosts and their environment. This book is a useful reference book for students, researchers, aquaculture technicians, farm and hatchery managers and policy makers of aquaculture regulatory agencies.
