from ethnographic interview and textual data from the frigid prairie of Alberta Canada the heart of downtown Los Angeles California and the iconic Galapagos Islands of Ecuador McCumber studies how humans have sought to suppress and exterminate rat populations in a variety of environmental social and political situations He shows how in these disparate locations rat control is a social practice that draws and clarifies the spatial and symbolic boundaries between good and bad forms of nature Rats are near the bottom of a symbolic hierarchy of species that places human life at the top companion animals and majestic wildlife just below them and the invasive species that call for systematic extermination at the very bottom This hierarchy of living things that places rats at the bottom McCumber argues mirrors human systems of social inequalities and power dynamics Both original and engaging *Bad Nature* urges readers to consider when charting a just and sustainable future where will the rats be placed in the worlds we envision
