Animal Weapons:

Animal Weapons ,1996 *Animal Weapons* Douglas J. Emlen,2014-11-11 WINNER OF THE PHI BETA KAPPA AWARD IN SCIENCE The story behind the stunning extreme weapons we see in the animal world teeth and horns and claws and what they can tell us about the way humans develop and use arms and other weapons In *Animal Weapons* Doug Emlen takes us outside the lab and deep into the forests and jungles where he s been studying animal weapons in nature for years to explain the processes behind the most intriguing and curious examples of extreme animal weapons fish with mouths larger than their bodies and bugs whose heads are so packed with muscle they don t have room for eyes As singular and strange as some of the weapons we encounter on these pages are we learn that similar factors set their evolution in motion Emlen uses these patterns to draw parallels to the way we humans develop and employ our own weapons and have since battle began He looks at everything from our armor and camouflage to the evolution of the rifle and the structures human populations have built across different regions and eras to protect their homes and communities With stunning black and white drawings and gorgeous color illustrations of these concepts at work *Animal Weapons* brings us the complete story of how weapons reach their most outsized dramatic potential and what the results we witness in the animal world can tell us about our own relationship with weapons of all kinds *Animals with Wicked Weapons* Susan K. Mitchell,2008-07-01 Learn about the weapons that different animals have to protect themselves from predators *The Art of Attack and the Development of Weapons* H. S. Cowper,2012-03-30 This most unusual book is subtitled Being a Study in the Development of weapons and Appliances of Offence from the Earliest Times to the Age of Gunpowder It surveys in considerable detail and with numerous drawings and illustrations the art and means of aggression developed by man beginning with the bare hand or fist and then the fist reinforced by such appliances as the cestus of Roman times and the knuckleduster of the more enlightened age From here it moves on to simple unshafted hand held weapons designed for bruising and ripping clubs stones etc The next stage is reinforcing the arm the development of hafted weapons and attachment of weapon heads to shafts tha axe and adze type and the ball and thong such as the bola These are categorized as striking weapons Then come the pointed weapons flint and metal daggers spears tridents and the like So we are taken on a stage by stage journey through the whole range of weaponry grappling hooks cutting weapons throwing spears javelins harpoons catapults blowpipes and the means of throwing or discharging them The sheer variety of means of dealing aggressively with your opponent when they are spelled out in detail is remarkable and there are many odd looking weapons illustrated In the detailed study and analysis of its subject this book can have no rival **Spines, Horns, and Armor** Jody Sullivan Rake,2012 Describes animals that use spines horns and armor as weapons or defenses **Library of Congress Subject Headings** Library of Congress,Library of Congress. Subject Cataloging Division,1989 **Preventing Chemical Weapons** Lijun Shang,Malcolm Dando,Michael Crowley,2018-08-20 The life and chemical sciences are in the midst of a period of rapid and revolutionary transformation that

will undoubtedly bring societal benefits but also have potentially malign applications notably in the development of chemical weapons Such concerns are exacerbated by the unstable international security environment and the changing nature of armed conflict which could fuel a desire by certain States to retain and use existing chemical weapons as well as increase State interest in creating new weapons whilst a broader range of actors may seek to employ diverse toxic chemicals as improvised weapons Stark indications of the multi faceted dangers we face can be seen in the chemical weapons attacks against civilians and combatants in Iraq and Syria and also in more targeted chemical assassination operations in Malaysia and the UK Using a multi disciplinary approach and drawing upon an international group of experts this book analyses current and likely near future advances in relevant science and technology assessing the risks of their misuse The book examines the current capabilities limitations and failures of the existing international arms control and disarmament architecture notably the Chemical Weapons Convention in preventing the development and use of chemical weapons Through the employment of a novel Holistic Arms Control methodology the authors also look beyond the bounds of such treaties to explore the full range of international law international agreements and regulatory mechanisms potentially applicable to weapons employing toxic chemical agents in order to develop recommendations for more effective routes to combat their proliferation and misuse A particular emphasis is given to the roles that chemical and life scientists health professionals and wider informed activist civil society can play in protecting the prohibition against poison and chemical weapons and in working with States to build effective and responsive measures to ensure that the rapid scientific and technological advances are safeguarded from hostile use and are instead employed for the benefit of us all Library of Congress Subject Headings
