Gibson, John Theodore Huber, James Braden Woolley, 1997 This publication presents illustrated keys to the 19 families and 706 described genera of Chalcidoidea known to occur in the Nearctic region minimally America north of Mexico but also including those areas of Mexico generally considered as having a Nearctic insect fauna The first three chapters provide an introduction to this superfamily of wasps most of whose members are parasites of other insects a review of chalcidoid morphology as related to terms used in the keys and an overview of the superfamily including a 41 couplet key to families Each of the remaining 19 chapters reviews one family includes sections on recognition systematics relationships biology literature an annotated key to the Nearctic genera and for larger families an index to genera based on couplet number Over 1 800 line drawings electron micrographs illustrate the keys Annotations include references to existing keys to species estimated number of species and known distribution host range in the region      **Annotated Keys to the Genera of Nearctic Chalcidoidea (Hymenoptera)** ,1997

**Hymenoptera** Andrew Austin, Mark Dowton, 2000 The Hymenoptera is one of the largest orders of terrestrial arthropods and comprises the sawflies wasps ants bees and parasitic wasps This book examines the current state of all major areas of research for this important group of insects including systematics biological control behaviour and use in education

Chalcidoidea of Iran Hassan Ghahari, Gary Gibson, Gennaro Viggiani, 2021-01-27 The superfamily Chalcidoidea Insecta Hymenoptera contains in excess of 26 000 described species worldwide but with an estimated total diversity of more than 500 000 species the vast majority of species have yet to be discovered and described Most chalcidoid species are parasitoids of hosts in at least 12 different insect orders attacking the egg larval or pupal stages though phytophagy and other life cycles and hosts are known Iran is the 18th largest country in the world and has a rich and diverse insect fauna including Chalcidoidea It is extremely interesting from a biogeographic point of view and a paradise for an entomologist This book summarizes the results of all prior research concerning species diversity of Iranian Chalcidoidea including host records and distribution records by province in Iran as well as world distribution by country for 1 351 species of Chalcidoidea recorded from Iran through the end of 2019      **Chalcidoidea of the World** John Heraty, James Woolley, 2025-03-25 The superfamily Chalcidoidea the jewel wasps are part of the insect order Hymenoptera The superfamily comprises more than 27 000 known species with an estimated total diversity of more than 500 000 species meaning that the vast majority have yet to be discovered and described Most of the species are parasitoids attacking the egg larval stage or pupal stage of their host though many other life cycles are known including gall associates and fig pollinators This landmark volume has been co authored by world authorities on the systematics and biology of chalcidoid wasps It provides an introduction to the superfamily a review of chalcidoid morphology an overview of the fossil record a phylogenetic framework for the revised classification of the superfamily an identification key for the 50 recognized families and detailed treatments of the individual

families For many years to come this important book will serve the needs of hymenopterists and professional entomologists taxonomists and systematists entomologists working on parasitic wasps as biological control agents and ecologists working on parasite host interactions

*Revision of the European species of Omphale Haliday (Hymenoptera, Chalcidoidea, Eulophidae)* Christer Hansson, Ekaterina Shevtsova, 2012-10-25 The European species of Omphale are revised including 37 species of which 11 are new All species are described thoroughly illustrated and included in gender specific identification keys Two new morphological character sets are introduced for the classification male genitalia and wing interference patterns WIPs Both sets are used to identify species and the former is also useful for classification of species groups Hosts are known for 14 species and all are primary endoparasitoids of immature stages of gall midges Diptera Cecidomyiidae Host preferences are unique for each species suggesting host specialization as a driving force for speciation Several of the species are known only from females or have a strong female biased sex ratio indicating thelytokous parthenogenesis Distributional data point to a pan European distribution for most species New synonyms and combinations affect the nomenclature in subfamily Entedoninae

Caterpillars in the Middle Robert J. Marquis, Suzanne Koptur, 2022-04-22 Caterpillars are excellent model organisms for understanding how multiple selective forces shape the ecology and evolution of insects and organisms in general Recent research using the tools of modern molecular biology genetics metabolomics microbial ecology experiments conducted at a global level network analysis and statistical analyses of global data sets combined with basic natural history are yielding exciting new insights into caterpillar adaptations and ecology The best way to view these research advances is within a framework of tri trophic interactions This is a timely topic for research given the central role of caterpillars and plants in the ecology and trophic structure of terrestrial communities This book is unique in that it contains chapters from a team of experts on a diversity of key topics within caterpillar plant interactions This volume brings together contributions by researchers from around the globe working in both tropical and temperate habitats and in human managed and more natural habitats It is a significant contribution to our understanding of insect biology and the role that insects as represented by caterpillars play in a world increasingly dominated by humans and one in which threats to insect biodiversity are mounting Chapter 11 is available open access under a Creative Commons Attribution 4.0 International License via link [springer.com](https://www.springer.com) The Natural History of Caterpillar Ant Associations is available open access under a Creative Commons Attribution 4.0 International License via link [springer.com](https://www.springer.com)

Gates, 2008-06-24 The subfamily Rileyinae Hymenoptera Eurytomidae is redefined to contain 6 genera and 69 species for which keys are provided Two morphological data sets analyzed via maximum parsimony with PAUP yield hypotheses on the placement of Rileyinae within Eurytomidae and internal relationships of Rileyinae Tables detailing host utilization for Eurytomidae genera Rileyinae species and confirmed suspected

plant associations for Rileyinae are included *Advances in the systematics of Hymenoptera*. Norman F. Johnson, 2009-09-14 This issue celebrates the 75th birthday of Dr Lubomir Masner a source of knowledge enthusiasm and inspiration for systematic entomologists in all fields but especially for students of Hymenoptera His unflagging dedication to the study of the parasitoid wasps of the superfamilies Proctotrupoidea Platygastroidea and Ceraphronoidea has completely transformed our understanding of the richness and evolutionary history of these insects His zeal and innovation in collecting have not only dramatically enhanced the basis for our understanding of hymenopteran diversity but also contributed to the development of the Canadian National Collection of Insects into one of the premiere systematic entomology research institutions in the world Twenty six authors have contributed to this volume in 17 papers on the systematics of the families Braconidae Ceraphronidae Chalcididae Eucharitidae Eupelmidae Eurytomidae Figitidae Mymaridae Platygastriidae Vespidae and Xiphydriidae Six new genera and 33 new species are described encompassing fossil material as well as species from the Neotropical Afrotropical Oriental and Australasian regions A short biography of Dr Masner is accompanied by a bibliography of his scientific papers a list of taxa he has described over 55 years of research and a list of taxa named in his honor

**Revision of *Ufens* Girault, 1911 (Hymenoptera: Trichogrammatidae)** Albert K. Owen, 2011-11 The first worldwide revision of the wasp genus *Ufens* Girault 1911 Hymenoptera Trichogrammatidae Oligositinae is presented *Ufens* is known to parasitize primarily hemipteran eggs and is a cosmopolitan genus most common in temperate and semi arid regions such as the southwestern United States and Australia Forty three species are recognized here Included in the revision are five species formerly in the genus *Ufensia* herein synonymized and 32 new species In addition seven species are removed from *Ufens* and placed in renewed combination in *Mirufens* Because thirteen nominal species remain unidentifiable they are treated as nomina dubia A worldwide key to species is provided A preliminary phylogenetic hypothesis is presented utilizing both molecular and morphological data in maximum parsimony analysis Molecular data however are limited to twelve of the recognized species Thirty seven morphological characters were utilized both alone and together with molecular data Due to greater confidence in molecular results and overall lack of resolution the results of the paired down molecular plus morphological analysis were utilized as a backbone for analyzing the complete morphological data set Overall results are inconclusive with few relationships consistently recovered There does appear to be a Holarctic clade but even this result is tenuous

**The Greenland Entomofauna** Jens Böcher, N.P. Kristensen (†), Thomas Pape, Lars Vilhelmsen, 2015-05-26 In *The Greenland Entomofauna* an international team of 64 taxonomic specialists provide for the first time a richly illustrated guide to the identification of the 1200 species of Hexapods Insects Arachnids and Myriapods so far known to occur in the country While the composition origin and adaptations of the Greenland fauna has always been a challenge to biogeographers and ecologists ecophysiologicalists the provision of a tool for detailed identification of its constituent species is now particularly timely since global climate change will expectedly have a particularly noticeable impact on biota at high latitudes This

obviously renders the feasibility of monitoring distributional range shifts of the principal components of this biota a matter of some urgency Contributors are Achterberg Cornelius van Ahola Matti Bart k Miroslav Behan Pelletier Valerie Bird Jeremy M B g Katrine Brodo Fenja Buhl Peter N Dahl Christine Disney R Henry L Dittmar Katharina Fjellberg Arne Gammelmo ivind Forshage Mattias Gerecke Reinhard Gertsson Carl Axel Haastriter Michael M L Haenni Jean Paul Heie Ole E Heraty John M Hodgson Chris Hodgkinson Ian D Horsfield David Huber John T Jaschoff Matthias Jensen Frank Johanson Kjell A Jussila Reijo Karsholt Ole Krzeminska Ewa Lantsov Vladimir I L ska Pavel Lindegaard Claus Lyneborg Leif Makarova Olga Marusik Yura M Mathis Wayne N Maz nek Libor Michelsen Verner Munk Thorkild Murphy William L Nielsen S ren A Nielsen Tore R Noyes John S Oosterbroek Pjotr Ozerov Andrey L Pape Thomas Pinto John D Pollet Marc Rindal Eirik Roh cek Jindrich Simonsen Thomas J Smith Vincent S S li Geir Star Jaroslav Strassen Richard zur Svensson Bo W Vilhelmsen Lars Vilkamaa Pekka Wilson Michael Zatwarnicki Tadeusz

*Insect Biodiversity* Robert G. Foottit, Peter H. Adler, 2017-10-02 Volume One of the thoroughly revised and updated guide to the study of biodiversity in insects The second edition of *Insect Biodiversity Science and Society* brings together in one comprehensive text contributions from leading scientific experts to assess the influence insects have on humankind and the earth s fragile ecosystems Revised and updated this new edition includes information on the number of substantial changes to entomology and the study of biodiversity It includes current research on insect groups classification regional diversity and a wide range of concepts and developing methodologies The authors examine why insect biodiversity matters and how the rapid evolution of insects is affecting us all This book explores the wide variety of insect species and their evolutionary relationships Case studies offer assessments on how insect biodiversity can help meet the needs of a rapidly expanding human population and also examine the consequences that an increased loss of insect species will have on the world This important text Explores the rapidly increasing influence on systematics of genomics and next generation sequencing Includes developments in the use of DNA barcoding in insect systematics and in the broader study of insect biodiversity including the detection of cryptic species Discusses the advances in information science that influence the increased capability to gather manipulate and analyze biodiversity information Comprises scholarly contributions from leading scientists in the field *Insect Biodiversity Science and Society* highlights the rapid growth of insect biodiversity research and includes an expanded treatment of the topic that addresses the major insect groups the zoogeographic regions of biodiversity and the scope of systematics approaches for handling biodiversity data

*Parasitoid Wasps of South East Asia* Buntika A. Butcher, Donald L. J. Quicke, 2023-12-22 Parasitoid wasps are cosmopolitan numerous and enormously diverse with probably one million or more species worldwide most of which occur in the moist tropics Their ecological importance is enormous although perhaps most evident in their major roles in the control of insect pest populations In natural ecosystems they are integral in regulating populations of a vast number of insects and therefore are key players in terrestrial food webs Knowledge of their biology is still very poor because the current state of taxonomy is still in its infancy in most parts of the

world In this book we provide an overview of the more than 30 families of parasitoid wasps that occur in the 11 countries in South East Asia Particular emphasis is given to those most commonly encountered and reared as well as to those used in biological control programmes Outlines of the morphology biology ecology and behaviour of each family as well as of various important subfamilies are presented The current state of taxonomy in the region is summarised Other chapters cover basic biology behaviour morphological terminology phylogeny and methods of specimen collecting preparation and rearing with particular relevance to the tropics Modern molecular approaches to speeding taxonomic description of hyperdiverse taxa are considered in depth All groups are illustrated with colour photographs This book will be of value to professional entomologists academics entomology students and the growing body of amateur entomologists and insect photographers

**Egg Parasitoids in Agroecosystems with Emphasis on Trichogramma** Fernando L. Consoli, José R. P. Parra, Roberto A. Zucchi, 2010-09-28 Egg Parasitoids in Agroecosystems with emphasis on Trichogramma was conceived to help in the promotion of biological control through egg parasitoids by providing both basic and applied information The book has a series of chapters dedicated to the understanding of egg parasitoid taxonomy development nutrition and reproduction host recognition and utilization and their distribution and host associations There are also several chapters focusing on the mass production and commercialization of egg parasitoids for biological control addressing important issues such as parasitoid quality control the risk assessment of egg parasitoids to non target species the use of egg parasitoids in integrated pest management programs and the impact of GMO on these natural enemies Chapters provide an in depth analysis of the literature available are richly illustrated and propose future trends

**Biodiversity Conservation in Costa Rica** Gordon W. Frankie, Alfonso Mata, S. Bradleigh Vinson, 2025-03-21 The beautiful tropical dry forest of northwest Costa Rica with its highly seasonal rainfall and diversely vegetated landscape is disappearing even more rapidly than Costa Rica's better known rain forest primarily because it has been easier to convert to agriculture This book based on more than thirty years of study offers the first comprehensive look at the ecology biodiversity and conservation status of this endangered and fragile region The contributors from Costa Rica Britain Mexico and the United States and representing the fields of ecology environmental education policy and the law examine the major plant and animal groups living in the dry forest and present the first technical evaluation of Costa Rica's conservation efforts As they assess the status of their area of specialty in the dry forest the contributors also look beyond this particular region to show how its plants and animals are ecologically and evolutionarily connected to other geographic areas

in Costa Rica and Central America Their chapters cover topics such as watershed and coastal management plant phenology pollination insects birds mammals amphibians and reptiles They also consider the socioeconomic policy legal and political aspects of biodiversity conservation giving the volume a wide ranging perspective and making a unique contribution to our knowledge of the tropical dry forest The book concludes with an important synthesis of the contributors recommendations on future directions policies and actions that will better conserve biodiversity in Costa Rica and other neotropical forests as well This title is part of UC Press s Voices Revived program which commemorates University of California Press s mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 2005      Canadian Books in Print.
