## **Annual Review Of Ecology And Systematics Vol 26:**

Ecology, Sustainable Development and Accounting Seleshi Sisaye, 2015-08-11 Accounting literature has viewed sustainability in terms of social economic and environmental performances There have been concerns that the relationship between sustainability accounting and organizational performance cannot be explained unless we can deduce patterns of administrative behaviour that chronicle management practices Ecology Sustainable Development and Accounting argues that despite the broader social and economic development dimensions of sustainability and the limitations of its extension to corporate and organizational behaviour an ecological framework is capable of providing the overall societal and community chronologies that describe corporate sustainable operations Drawing examples from international development and federal government organizations this book documents the link between ecology corporate sustainable development and sustainability accounting and reporting It draws together the literature from several disciplines to elaborate the contribution of the ecological approach to sustainable development in the accounting literature This book will be of particular interest to students academics and practitioners in the areas of environmental studies ecological economics sustainable development studies and social and environmental accounting The sociological and anthropological perspectives make this book the first of its kind to apply the population ecology of sociology to both the sustainability and accounting literature Methods and Measurements of Periphyton Communities: a Review R. L. Weitzel, 1979 *International Perspectives on Global Environmental Change* Stephen Young, Steven Silvern, 2012-02-03 Environmental change is increasingly considered a critical topic for researchers across multiple disciplines as well as policy makers throughout the world Mounting evidence shows that environments in every part of the globe are undergoing tremendous human induced change Population growth urbanization and the expansion of the global economy are putting increasing pressure on ecosystems around the planet To understand the causes and consequences of environmental change the contributors to this book employ spatial and non spatial data diverse theoretical perspectives and cutting edge research tools such as GIS remote sensing and other relevant technologies *International Perspectives on Global Environmental Change* brings together research from around the world to explore the complexities of contemporary and historical environmental change As an InTech open source publication current and cutting edge research methodologies and research results are quickly published for the academic policy making communities Dimensions of environmental change explored in this volume include Climate change Historical environmental change Biological responses to environmental change Land use and land cover change Policy and management for environmental change Advances in Dynamic Games and Applications Tamer Başar, Alain Haurie, 2013-11-11 Recent years have witnessed a surge of activity in the field of dynamic both theory and applications Theoretical as well as practical games in problems in zero sum and nonzero sum games continuous time differential and discrete time multistage games and deterministic and stochastic games games are currently being investigated by researchers in diverse disciplines such as engineering

mathematics biology economics management science and political science This surge of interest has led to the formation of the International Society of Dynamic Games ISDG in 1990 whose primary goal is to foster the development of advanced research and applications in the field of game theory One important activity of the Society is to organize biannually an international symposium which aims at bringing together all those who contribute to the development of this active field of applied science In 1992 the symposium was organized in Grimentz Switzerland under the supervision of an international scientific committee and with the help of a local organizing committee based at University of Geneva This book which is the first volume in the new Series Annals of the International Society of Dynamic Games see the Preface to the Series is based on presentations made at this symposium It is however more than a book of proceedings for a conference Every paper published in this volume has passed through a very selective refereeing process as in an archival technical journal

**Health and Environment in Aquaculture** Edmir Carvalho, Gianmarco S. David, Reinaldo J. Silva, 2012-04-11 Aquaculture has been expanding in a fast rate and further development should rely on the assimilation of scientific knowledge of diverse areas such as molecular and cellular biology and ecology Understanding the relation between farmed species and their pathogens and parasites and this relation to environment is a great challenge Scientific community is involved in building a model for aquaculture that does not harm ecosystems and provides a reliable source of healthy seafood This book features contributions from renowned international authors presenting high quality scientific chapters addressing key issues for effective health management of cultured aquatic animals Available for open internet access this book is an effort to reach the broadest diffusion of knowledge useful for both academic and productive sector

**Coffee Agroecology** Ivette Perfecto, John Vandermeer, 2015-02-11 Based on principles of the conservation and optimization of biodiversity and of equity and sustainability this book focuses on the ecology of the coffee agroecosystem as a model for a sustainable agricultural ecosystem It draws on the authors own research conducted over the last twenty years as well as incorporating the vast literature that has been generated on coffee agroecosystems from around the world The book uses an integrated approach that weaves together various lines of research to understand the ecology of a very diverse tropical agroforestry system Key concepts explored include biodiversity patterns metapopulation dynamics and ecological networks These are all set in a socioeconomic and political framework which relates them to the realities of farmers livelihoods The authors provide a novel synthesis that will generate new understanding and can be applied to other examples of sustainable agriculture and food production This synthesis also explains the ecosystem services provided by the approach including the economic fair trade and political aspects surrounding this all important global commodity

**Global Advances in Biogeography** Lawrence Stevens, 2012-03-30 Global Advances in Biogeography brings together the work of more than 30 scientific authorities on biogeography from around the world The book focuses on spatial and temporal variation of biological assemblages in relation to landscape complexity and environmental change Global Advances embraces four themes biogeographic theory and tests of

concepts the regional biogeography of individual taxa the biogeography of complex landscapes and the deep time evolutionary biogeography of macrotaxa In addition the book provides a trove of new information about unusual landscapes the natural history of a wide array of poorly known plant and animal species and global conservation issues This book is well illustrated with numerous maps graphics and photographs and contains much new basic biogeographical information that is not available elsewhere It will serve as an invaluable reference for professionals and members of the public interested in global biogeography evolution taxonomy and conservation

### **Control and Game-Theoretic Models of the Environment**

Jerzy Filar, Carlo Carraro, 2012-12-06 This book collects some recent works on the application of dynamic game and control theory to the analysis of environmental problems This collection of papers is not the outcome of a conference or of a workshop It is rather the result of a careful screening from among a number of contributions that we have solicited across the world In particular we have been able to attract the work of some of the most prominent scholars in the field of dynamic analyses of the environment Engineers mathematicians and economists provide their views and analytical tools to better interpret the interactions between economic and environmental phenomena thus achieving through this interdisciplinary effort new and interesting results The goal of the book is more normative than descriptive All papers include careful modelling of the dynamics of the main variables involved in the game between nature and economic agents and among economic agents themselves as well described in Vrieze's introductory chapter Furthermore all papers use this careful modelling framework to provide policy prescriptions to the public agencies authorized to regulate emission dynamics Several diverse problems are addressed from global issues such as the greenhouse effect or deforestation to international ones such as the management of fisheries to local ones for example the control of effluent discharges Moreover pollution problems are not the only concern of this book

*The Liberal Manifesto* Frank S. Smith, 2012-08-28 AMERICA HAS REACHED AN UNPRECEDENTED TIME IN HISTORY WITH THE SAFETY LIBERTY AND PROSPERITY OF EVERY AMERICAN IN JEOPARDY The moral fabric of America and the individual liberty of Americans continue to suffer unrelenting attacks In his definitive new book *The Liberal Manifesto* Frank S. Smith presents a convincing case that America's decline is due to the unsustainable nature of the liberal ideology and a hidden agenda behind the liberal movement He provides numerous examples of past and present efforts by liberal elites to manufacture circumstances and manipulate American ideals to conform to expectations that are unsustainable These examples substantiate their abuse of power breaking of laws and socialistic efforts to precipitate an environment that is forcing Americans to become dependent on and submissive to government control *The Liberal Manifesto* identifies six

Convenience Doctrines philosophies developed for the sake of convenience that characterize the pretense of the liberal movement and the motive behind each one It shows how these philosophies which appeal to the emotions of unwitting Americans are spurious and unsustainable The evidence in this book suggests that the more liberalism prevails the more Americans will suffer From socialist and communist parallels to the unsustainable nature of big government The Liberal Manifesto illustrates the source of the problem Thomas Jefferson advocated for a broadly educated citizenry because he believed that well informed citizens are the only sure reliance for the preservation of our liberty If Americans wish to retain America s exceptionalism it will require citizens getting informed and getting involved

**Nature and Culture** Sarah Pilgrim, Jules N. Pretty, 2010-09-23 There is a growing recognition that the diversity of life comprises both biological and cultural diversity But this division is not universal and in many cases has been deepened by the common disciplinary divide between the natural and social sciences and our apparent need to manage and control nature This book goes beyond divisive definitions and investigates the bridges linking biological and cultural diversity The international team of authors explore the common drivers of loss and argue that policy responses should target both forms of diversity in a novel integrative approach to conservation thus reducing the gap between science policy and practice While conserving nature alongside human cultures presents unique challenges this book forcefully shows that any hope for saving biological diversity is predicated on a concomitant effort to appreciate and protect cultural diversity

**Evolution and the Human-Animal Drive to Conflict** Jorge A. Colombo, 2023-07-31 Evolution and the Human Animal Drive to Conflict examines how fundamental universal animal drives such as dominance prevalence survival kinship and profit greed advantage whether of material or social nature provide the basis for the evolutionary trap that promotes the unstable conflictive dominant prone individual and group human behaviours Examining this behavioural tension this book argues that while these innate features set up behaviours that lean towards aggression influenced by social inequalities the means implemented to defuse them resort to emotional and intellectual strategies that sponsor fanaticism and often reproduce the very same behaviours they intend to defuse In addressing these concerns the book argues that we should enhance our resources to promote solidarity accept cultural differences deter expansionist and uncontrolled profit drives and achieve collective access towards knowledge and progress in living conditions This entails promoting the redistribution of resources and creative labour access and avoiding policies that generate a fragmented world with collective and individual development disparities that invite and encourage dominance behaviours This resource redistribution asserts that it is necessary to reformulate the global set of human priorities towards increased access to better living conditions cognitive

enhancement a more amiable interaction with the ecosystem and non aggressive cultural differences promote universal access to knowledge and enhance creativity and cultural convivence These behavioural changes entail partial derangement of our ancestral animal drives camouflaged under different cultural profiles until the species succeeds in replacing the dominance of basic animal drives with prosocial collective ones Though it entails a formidable task of confronting financial military and religious powers and cultural inertias human history is also a challenging continuous experience in these domains for the sake of our own self identity and self evaluation we should reject any suggestion of not continuing embracing slowly constructing collective utopias channelled towards improving individual and collective freedom and creativeness This book will interest academics and students in social cognitive and evolutionary psychology the neurosciences palaeoanthropology philosophy and anthropology

**Agroecological Innovations** Norman Uphoff, 2013-06-17 The world's food supply needs to rise significantly yet both arable and water supplies per capita are decreasing Not only are modern agricultural methods beyond the reach of those suffering the greatest food insecurity but they are also ecologically damaging relying upon fossil energy and chemical inputs This volume offers a collection of innovative and diverse approaches to agricultural development Documented in 12 case studies these approaches are reliant upon greater knowledge skill and labour input rather than larger capital expenditure They are shown to increase yield substantially sometimes doubling or tripling output This volume presents the concepts and operational means for reorienting agricultural efforts towards these more environmentally friendly and socially desirable approaches in the developed as well as developing world

**Society And The Environment: A Swedish Research Perspective** U. Svedin, Britt Hägerhäll Aniansson, 2012-12-06 Following the report by the World Commission on Environment and Development research efforts devoted to sustainable development were promoted by the Swedish Council for Planning and Coordination of Research FRN With its fifteen essays by Swedish scholars on different aspects of society environment interface giving various analyses of and prospects for the concept of sustainable development this book is a result of those efforts The authors represent a spectrum of inter and multidisciplinary approaches in the field of ecology economy and environment They are economists ecologists engineers anthropologists physicists geographers political scientists science theorists and educationalists discussing sustainable development and the future of society and the environment The question is also raised whether there is a special Swedish touch with a responsibility for the world ethos to the approach to environmental issues especially as seen through the efforts of the research community

*Revegetation in Arctic and Subarctic North America* Larry Johnson, Keith Van Cleve, 1976 *Degraded Forests in Eastern Africa* Frans Bongers, Timm Tennigkeit, 2010-09-23 Forest degradation as a result of logging shifting cultivation agriculture and urban development is a major issue throughout the tropics It leads to loss in soil fertility water resources and biodiversity as well as contributes to climate change Efforts are therefore required to try to minimize further degradation and restore tropical forests in a sustainable way This is the first research based book to examine this problem in East Africa

The specific focus is on the forests of Ethiopia Tanzania and Uganda but the lessons learned are shown to be applicable to neighbouring countries and others in the tropics A wide range of forest types are covered from dry Miombo forest and afromontane forests to forest savannah mosaics and wet forest types Current management practices are assessed and examples of good practice presented The role of local people is also emphasized The authors describe improved management and restoration through silviculture plantation forestry and agroforestry leading to improvements in timber production biodiversity conservation and the livelihoods of local people
