## INTRODUCTION

Space microbiology studies may be divided into three major categories, each of which will be discussed in light of the current state of knowledge in that field. The first involves analysis of samples collected outside the Earth's biosphere. The second includes the many studies in which pure cultures of terrestrial microorganisms were evaluated either during or after exposure to components of the spaceflight environment. The third category contains studies of the autoflora of crew members and the microbial load of recoverable spacecraft components which were performed to evaluate changes in populations of microorganisms. Although some spaceflight studies were performed in a manner which produced equivocal results, the composite picture allows for definitive conclusions in each of the three major categories.

## EXTRATERRESTRIAL LIFE DETECTION STUDIES

Extraterrestrial materials have been collected during several American spaceflight missions and returned to Earth for microbiological analyses. In the first of these,
