Huston,2020 The focus of this book is on centrioles small organelles adjacent to the nucleus in all human and animal eucaryotic cells It provides the findings and critical analyses of over 750 articles written in this century In addition to centrioles the topics include centrosomes chromosomes microtubules and kinetochores cell division and duplication and tumor development The book also includes discussions on centriole dynamics and electromagnetics effects It concludes with a chapter on centriole errors particularly cells with supernumerary centrioles The book is intended for students scholars and researchers studying and working in the field of nuclear mechanics In addition to the book content it provides a guide for literature investigation Publisher s website Atomic Force Microscopy Investigations into Biology Christopher Frewin,2012-03-07 The atomic force microscope AFM has become one of the leading nanoscale measurement techniques for materials science since its creation in the 1980 s but has been gaining popularity in a seemingly unrelated field of science biology The AFM naturally lends itself to investigating the topological surfaces of biological objects from whole cells to protein particulates and can also be used to determine physical properties such as Young s modulus stiffness molecular bond strength surface friction and many more One of the most important reasons for the rise of biological AFM is that you can measure materials within a physiologically relevant environment i e liquids This book is a collection of works beginning with an introduction to the AFM along with techniques and methods of sample preparation Then the book displays current research covering subjects ranging from nano particulates proteins DNA viruses cellular structures and the characterization of living cells Annual Review of Genetics ,1999 Publishes original critical reviews of the significant literature and current development in genetics **Trends in Cervical Cancer Research** Hector T. Varaj,2007 Cervical cancer is a malignancy of the cervix World wide it is the second most common cancer of women It may present with vaginal bleeding but symptoms may be absent until the cancer is in advanced stages which has made cervical cancer the focus of intense screening efforts utilising the Pap smear Most scientific studies point to human papillomavirus HPV infection which is responsible for 90% of the cases of cervical cancer There are 7 most common types of HPV 16 18 31 33 42 52 and 58 Types 16 and 18 being the most common cause of the cancer Treatment is with surgery including local excision in early stages and chemotherapy and radiotherapy in advanced stages of the disease This book presents cutting edge research in this study of cervical cancer This involves new perspectives in pharmacological treatments anti hormonal agents therapeutic trends for patients nerve sparing treatments antibodies in single chain formats predictors of radiation response lymphatic mapping and docetaxel labelling with radionuclides Molecular Targets of CNS Tumors Miklos Garami,2011-09-22 Molecular Targets of CNS Tumors is a
