Calcium phosphate Ceramics - Bioresorbable Polymer Composite Biomaterials Dragan P. Uskoković, Nenad L. Ignjatović, 2007-10-01 In the past several years the accent of a number of scientific researches in the countries of the European Union USA and Japan was focused on the field of biomaterials Having the direct influence on the quality and longevity of human life these researches receive significant funding The bone tissue is an especially interesting subject of scientific research as much for the frequent osteoporosis as for the formative nature of organism Natural bone is mostly composed of nanostructural calcium phosphate hydroxyapatite Whether bone trauma was caused artificially or through illness the number of reconstructions increases every year worldwide and thus the monetary investment into this field Until now numerous kinds of biomaterials were used for this purpose Development of equipment and progress in characterization techniques and devices enabled an exponential development of new and advanced biomaterials synthesis Many qualitative and quantitative content concepts and the organization of biomaterials on all structural levels were taken from nature Biomaterials for the reconstruction of bone tissue very similar to human tissue in the form of composite blocks injectable cements nano fillers etc were produced this way Synthesis of calcium phosphate and hydroxyapatite as well as the composite for the reconstruction of bone tissue has been a

significant research field of a section of Advanced Materials and Processes Department of the Institute of Technical Sciences of the Serbian Academy of Sciences and Arts ITS SASA from Belgrade for a number of years Apart from a number of published scientific papers in leading international journals lectures presented at the leading universities worldwide several PhD dissertations defended at various faculties in the land and several domestic patents researchers have established the basis of the technological procedure and the production of small series of various products developed in their laboratory These researches have very wide aspect of significance from fundamental scientific to specifically applicative It can be said that these researches include everything from synthesis processing characterization to their application This book contains 44 papers published in SCI journals since 1999 until May 2007 It is divided into five sections and each assembles the most important results in the specific area I Synthesis and Processing II Synthesis Properties and Characterization of Biomaterials III Mechanical Properties and Modelling of Biomaterials IV Biological Evaluation of Biomaterials V Behaviour of Biomaterials under Radiation Field *ISTFA 2012* ASM International,EDFAS Organizing Committee, editors,2012 **Ceramic Coatings** Feng Shi,2012-02-24 The main target of this book is to state the latest advancement in ceramic coatings technology in various industrial fields The book includes topics related to the applications of ceramic coating covers in engineering including fabrication route electrophoretic deposition and physical deposition and applications in turbine parts internal combustion engine pigment foundry etc *Fluid Dynamics of Particles, Drops, and Bubbles* Eric Loth,2023-08-17 This book is a modern presentation of multiphase flow from basic principles to state of the art research It explains dispersed fluid dynamics for bubbles drops or solid particles incorporating detailed theory experiments simulations and models while considering applications and recent cutting edge advances The book demonstrates the importance of multiphase flow in engineering and natural systems considering particle size distributions shapes and trajectories as well as deformation of fluid particles and multiphase flow numerical methods The scope of the book also includes coupling physics between particles and turbulence through dispersion and modulation and specific phenomena such as gravitational settling and collisions for solid particles drops and bubbles The eight course based chapters feature over 100 homework problems including theory based and engineering application questions The final three reference based chapters provide a wide variety of particle point force theories and models The comprehensive coverage will give the reader a solid grounding for multiphase flow research and design applicable to current and future engineering This is an ideal resource for graduate students researchers and professionals *Infrared Radiation* Vasyl Morozhenko,2012-02-10 This book represents a collection of scientific articles covering the field of infrared radiation It offers extensive information about current scientific research and engineering developments in this area Each chapter has been thoroughly revised and each represents significant contribution to the scientific community interested in this matter Developers of infrared technique technicians using infrared equipment and scientist that have interest in infrared radiation and its interaction with medium will comprise the main readership as they
