On the Nature of Ecological Paradox Michael Charles Tobias, Jane Gray Morrison, 2021-05-18 This work is a large powerfully illustrated interdisciplinary natural sciences volume the first of its kind to examine the critically important nature of ecological paradox through an abundance of lenses the biological sciences taxonomy archaeology geopolitical history comparative ethics literature philosophy the history of science human geography population ecology epistemology anthropology demographics and futurism The ecological paradox suggests that the human biological and from an insular perspective successful struggle to exist has come at the price of isolating H sapiens from life sustaining ecosystem services and far too much of the biodiversity with which we find ourselves at crisis level odds It is a paradox dating back thousands of years implicating millennia of human machinations that have been utterly ruinous to biological baselines Those metrics are examined from numerous multidisciplinary approaches in this thoroughly original work which aids readers particularly natural history students who aspire to grasp the far reaching dimensions of the Anthropocene as it affects every facet of human experience past present and future and the rest of planetary sentience With a Preface by Dr Gerald Wayne Clough former Secretary of the Smithsonian Institution and President Emeritus of the Georgia Institute of Technology Foreword by Robert Gillespie President of the non profit Population Communication

Plastic Reason Tobias Rees, 2016-05-03 Throughout the twentieth century neuronal researchers knew the adult human brain to be a thoroughly fixed and immutable cellular structure devoid of any developmental potential Plastic Reason is a study of the efforts of a few Parisian neurobiologists to overturn this rigid conception of the central nervous system by showing that basic embryogenetic processes most spectacularly the emergence of new cellular tissue in the form of new neurons axons dendrites and synapses continue in the mature brain Furthermore these researchers sought to demonstrate that the new tissues are still unspecific and hence literally plastic and that this cellular plasticity is constitutive of the possibility of the human Plastic Reason grounded in years of fieldwork and historical research is an anthropologist s account of what has arguably been one of the most sweeping events in the history of brain research the highly contested effort to consider the adult brain in embryogenetic terms A careful analysis of the disproving of an established truth it reveals the turmoil that such a disruption brings about and the emergence of new possibilities of thinking and knowing
