Mechanical Engineering Basic Research National Research Council, Division on Earth and Life Studies, Board on Chemical Sciences and Technology, Panel on Benchmarking the Research Competitiveness of the United States in Mechanical Engineering, 2008-12-14 Mechanical engineering is critical to the design manufacture and operation of small and large mechanical systems throughout the U S economy This book highlights the main findings of a benchmarking exercise to rate the standing of U S mechanical engineering basic research relative to other regions or countries The book includes key factors that influence U S performance in mechanical engineering research and near and longer term projections of research leadership U S leadership in mechanical engineering basic research overall will continue to be strong Contributions of U S

mechanical engineers to journal articles will increase but so will the contributions from other growing economies such as China and India At the same time the supply of U S mechanical engineers is in jeopardy because of declines in the number of U S citizens obtaining advanced degrees and uncertain prospects for continuing to attract foreign students U S funding of mechanical engineering basic research and infrastructure will remain level with strong leadership in emerging areas

Although computational modeling and simulation of material deformation was initiated with the study of structurally simple materials and inert environments there is an increasing demand for predictive simulation of more realistic material structure and physical conditions In particular it is recognized that applied mechanical force can plausibly alter chemical reactions inside materials or at material interfaces though the fundamental reasons for this chemomechanical coupling are studied in a material specific manner Atomistic level simulations can provide insight into the unit processes that facilitate kinetic reactions within complex materials but the typical nanosecond timescales of such simulations are in contrast to the second scale to hour scale timescales of experimentally accessible or technologically relevant timescales Further in complex materials these key unit processes are rare events due to the high energy barriers associated with those processes Examples of such rare

events include unbinding between two proteins that tether biological cells to extracellular materials 1 unfolding of complex polymers stiffness and bond breaking in amorphous glass bers and gels 2 and diffusive hops of point defects within crystalline alloys 3

Oceanography and Marine Biology, An Annual Review, Volume 40 R. N. Gibson, Margaret Barnes, R. J. A. Atkinson, 2002-08-29 Interest in oceanography and marine biology and its relevance to global environmental issues continues to increase creating a demand for authoritative reviews that summarize recent research Oceanography and Marine Biology An Annual Review has catered to this demand since its foundation by the late Harold Barnes more than 40 years ago It is an

Annual Reviews of Computational Physics V Dietrich Stauffer, 1997 In this fifth volume of the authoritative series the simulation of forest fires flames and hydrodynamics is presented in the first three articles The next two deal with quantum simulations in particular for two dimensions quantum Hall effect and monolayers Biology is connected with the last two articles we learn from biological evolution to complement computer hardware and software with evolware or we simulate immunology
