NEWBORN

Babies' vision is 40x less accurate than adults at seeing fine details

Most of the cells in the visual cortex are not yet coated in myelin. Poor contrast sensitivity & color recognition.

2 MONTHS

Babies Vision And Intelligence:

Babies, Vision, and Intelligence Glenn J. Doman, Mary Kett, Charlotte Combs, 1980-01-01 Intelligence and the Brain Dennis Garlick, 2010 This book turns the corner and finally provides a convincing explanation of IQ and human intelligence It begins by rejecting some of the most basic assumptions that psychologists make about intelligence including that intelligence should be defined by behavior Instead it argues that intelligence is about the ability to understand It then uses recent scientific findings about the brain to show how changes in the brain lead to understanding Readers will find that this book contains many revelations that will profoundly change their perception of how their own brain works This book will also explore the startling implication of a sensitive period for developing intelligence arguing that children can learn differently than adults Anyone who is interested in how the brain works why people differ in intelligence and how a child can be a genius will want to read this book

Hybrid Artificial Intelligent Systems, Part I Manuel Graña Romay, Emilio Corchado, M. Teresa Garcia-Sebastian, 2010

The 5 International Conference on Hybrid Artificial Intelligence Systems HAIS 2010 has become a unique established and broad interdisciplinary forum for researchers and practitioners who are involved in developing and applying symbolic and sub symbolic techniques aimed at the construction of highly robust and reliable problem solving techniques and bringing the most relevant achievements in this field Overcoming the rigid encasing imposed by the arising orthodoxy in the field of artificial intelligence which has led to the partition of researchers into so called areas or fields interest in hybrid intelligent systems is growing because they give freedom to design innovative solutions to the ever increasing complexities of real world problems Noise and uncertainty call for probabilistic often Bayesian methods while the huge amount of data in some cases asks for fast heuristic in the sense of suboptimal and ad hoc algorithms able to give answers in acceptable time frames High dimensionality demands linear and non linear dimensionality reduction and feature extraction algorithms while the imprecision and vagueness call for fuzzy reasoning and linguistic variable formalization Nothing impedes real life problems to mix difficulties presenting huge quantities of noisy vague and high dimensional data therefore the design of solutions must be able to resort to any tool of the trade to attack the problem Combining diverse paradigms poses challenging problems of computational and methodological interfacing of several previously incompatible approaches This is thus the setting of HAIS conference series and its increasing success is the proof of the vitality of this exciting field
