

CONCEPT MAP

SOME BASIC CONCEPTS OF CHEMISTRY

Law of Conservation of Mass

- Proposed by the French Chemist Antoine Lavoisier (1789)
- Mass can neither be created nor destroyed in a chemical reaction.
- For any chemical process in a closed system, the mass of the reactants must be equal to the mass of the products.

eg. $\text{C} + \text{O}_2 \rightarrow \text{CO}_2$
 $12\text{g} + 32\text{g} = 44\text{g}$
 Oxygen + Hydrogen $\rightarrow$ Water
 $16\text{g} \quad 2\text{g} \quad 18\text{g}$

Law of Definite Proportions

- Proposed by Joseph Proust (1794)
- A chemical compound always contains of the same elements combined together in the same ratio, irrespective of the method of preparation or the source from it is taken.
- In the formation of water compound, the ratio of the mass of hydrogen to the mass of oxygen is always 1 : 8, wherever for the source of water. Thus, if 1 g of water is decomposed, 1 g of hydrogen and 8 g of oxygen are always obtained.

Law of Multiple Proportions

- Proposed by John Dalton (1808)
- When elements combine, they do so in the ratio of small whole numbers. eg. carbon and oxygen react to form CO or CO_2 , but not C_2O_3 .

Concentration Terms

- Mass percent ($\%$) = $\frac{\text{Mass of solute}}{\text{Mass of solution}} \times 100$
- Molarity, $M = \frac{\text{Moles of solute}}{\text{Vol. of solution in l}} \text{ (mol/l)}$
 $M = (\text{Density in g/ml}) \times \frac{M}{M_2}$
- Molality, $M = \frac{\text{Moles of solute}}{\text{Mass of solvent in kg}}$
- Relative between molarity and molality
 $\frac{1}{M} = \frac{d}{M_2} \times \frac{M_1}{1000}$
- Molality, $m = \frac{M \times 1000}{M_2 - (M \times M_1)}$
- Mole fraction, $x_A = \frac{\text{moles of } A}{\text{Total moles}}$, $x_B = \frac{\text{moles of } B}{\text{Total moles}}$
 $x_A + x_B = 1$
 $\frac{x_A}{M_1} = \frac{x_B}{M_2}$
- Relative between molarity and mole fraction
 $x_A = \frac{M \times M_1}{1000 + M \times M_1}$
 $M = \frac{x_A \times 1000}{1 - x_A}$

Limiting Reagent

The reactant which present in lesser amount and gets consumed and limits the amount of product formed is called limiting reagent.

eg. $\text{H}_2 + \text{Cl}_2 \rightarrow 2\text{HCl}$
 $2\text{g} \quad 71\text{g}$

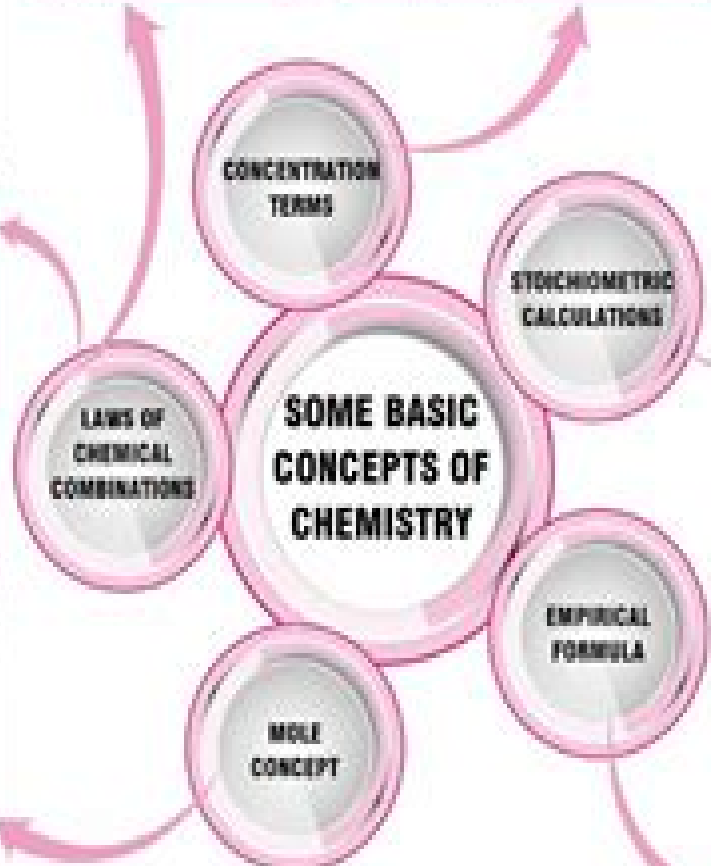

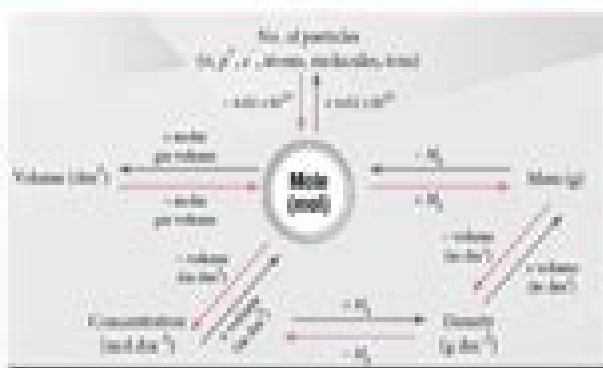

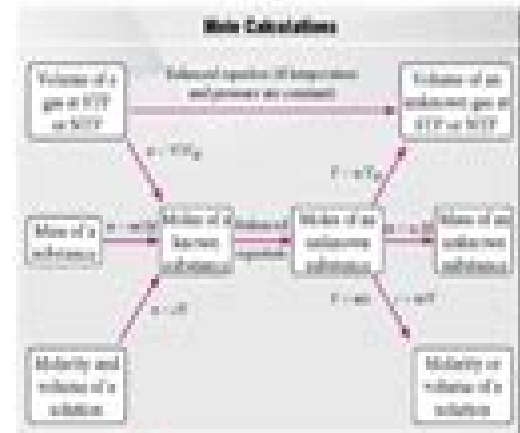

For every 1g of oxygen, 8g H_2 is required, if H_2 is present less than 8g then it will be limiting reagent.

Avogadro's Law

- Proposed by Avogadro (1811)
- Equal volumes of gases at the same temperature and pressure contain equal number of molecules.

Gay Lussac's Law of Gaseous Volumes

- Proposed by Gay Lussac (1808)
- In gaseous temperature and pressure, the volume of all gaseous reactants and products bear a simple whole number ratio to each other.

Implications for General Chemistry Textbooks Mansoor Niaz,Cecilia Marcano,2012-04-26 It goes without saying that atomic structure including its dual wave particle nature cannot be demonstrated in the classroom Thus for most science teachers especially those in physics and chemistry the textbook is their key resource and their students core source of information Science education historiography recognizes the role played by the history and philosophy of science in developing the content of our textbooks and with this in mind the authors analyze more than 120 general chemistry textbooks published in the USA based on criteria derived from a historical reconstruction of wave particle duality They come to some revealing conclusions including the fact that very few textbooks discussed issues such as the suggestion by both Einstein and de Broglie and before conclusive experimental evidence was available that wave particle duality existed Other large scale omissions included de Broglie s prescription for observing this duality and the importance of the Davisson Germer experiments as well as the struggle to interpret the experimental data they were collecting Also untouched was the background to the role played by Schrödinger in developing de Broglie s ideas The authors argue that rectifying these deficiencies will arouse students curiosity by giving them the opportunity to engage creatively with the content of science curricula They also assert that it isn t just the experimental data in science that matters but the theoretical insights and unwonted inspirations too In addition the controversies and discrepancies in the theoretical and experimental record are key
