Theory and Practice of Model Transformations Laurence Tratt,Martin Gogolla,2010-06-29

Model transformations are the glue that tie modelling activities together. If you've used modelling in anger then whether you know it or not you've used model transformations. They come in all shapes and sizes from moving models between different tools to generating implementations. Model transformations have humble beginnings at one point not long ago it was said by many in the know that the way forward in model transformations was to use XSLT. That this idea now raises a wry smile shows how far the model transformation community has come in a short time. Where once model transformations were hacked together in a variety of unsuitable languages we now have a number of powerful dedicated languages and theories at our disposal. Since 2008 the ICMT conference series has played a huge part in advancing the subject and this third edition was no different. The theories and languages presented at ICMT have allowed principled model transformations to play an ever greater part in real systems. Of course there is still much more to do we need our model transformations languages and theories to scale further allow greater expressivity be more extensible and aid reusability and we lack empirically backed studies of model transformations in use. Doubtless you can think of other gaps. Yet though some real world challenges lie just beyond our reach each year sees once daunting problems conquered. Much of that progress is now driven by ICMT and this year's edition showed how model transformations are increasingly being used in previously unfamiliar areas.

Frontiers in Numerical Analysis James Blowey,Alan Craig,Tony Shardlow,2012-12-06

The Tenth LMS EPSRC Numerical Analysis Summer School was held at the University of Durham UK from the 7th to the 19th of July 2002. This was the second of these schools to be held in Durham having previously been hosted by the University of Lancaster and the University of Leicester. The purpose of the summer school was to present high quality instructional courses on topics at the forefront of numerical analysis research to postgraduate students. The speakers were Franco Brezzi Gerd Dziuk Nick Gould Ernst Hairer Tom Hou and Volker Mehrmann. This volume presents written contributions from all six speakers which are more comprehensive versions of the high quality lecture notes which were distributed to participants during the meeting. At the time of writing it is now more than two years since we first contacted the guest speakers and during that period they have given significant portions of their time to making the summer school and this volume a success. We would like to thank all six of them for the care which

they took in the preparation and delivery of their material Composition Arthur Wesley Dow, 2012-03-13 Focusing on harmonic relations between lines color and dark and light patterns this manual influenced generations of artists Practical and well illustrated it conveys its insights in a convenient workbook format **Fundamental Approaches to Software**
