Basic Speech and Voice Science Lyman Spicer Judson, Andrew Thomas Weaver, 1933 Foundations of Speech Act Theory S.L. Tsohatzidis, 2002-09-11 Foundations of Speech Act Theory investigates the importance of speech act theory to the problem of meaning in linguistics and philosophy The papers in this volume written by respected philosophers and linguists significantly advance standards of debate in this area Beginning with a detailed introduction to the individual contributors this collection demonstrates the relevance of speech acts to semantic theory It includes essays unified by the assumption that current pragmatic theories are not well equipped to analyse speech acts satisfactorily and concludes with five studies which assess the relevance of speech act theory to the understanding of philosophical problems outside the area of philosophy of language **Essential Speech and Language Technology for Dutch** Peter Spyns, Jan Odijk, 2013-02-26 The book provides an overview of more than a decade of joint R D efforts in the Low Countries on HLT for Dutch It not only presents the state of the art of HLT for Dutch in the areas covered but even more importantly a description of the resources data and tools for Dutch that have been created are now available for both academia and industry worldwide The contributions cover many areas of human language technology for Dutch corpus collection including IPR issues and building in particular one corpus aiming at a collection of 500M word tokens lexicology anaphora resolution a semantic network parsing technology speech recognition machine translation text summaries generation web mining information extraction and text to speech to name the most important ones The book also shows how a medium sized language community spanning two territories can create a digital language infrastructure resources tools etc as a basis for subsequent R D At the same time it bundles contributions of almost all the HLT research groups in Flanders and the Netherlands hence offers a view of their recent research activities Targeted readers are mainly researchers in human language technology in particular those focusing on Dutch It concerns researchers active in larger networks such as the CLARIN META NET FLReNet and participating in conferences such as ACL EACL NAACL COLING RANLP CICling LREC CLIN and DIR both in the Low Countries InterSpeech ASRU ICASSP ISCA EUSIPCO CLEF TREC etc In addition some chapters are interesting for human language technology policy makers and even for science policy makers in general **Resources in Education**, 1997

Research in Education ,1973 **Language and Logic** Johan van der Auwera,1985-01-01 In this volume Van der Auwera attempts to clarify the idea that language reflects both mind and reality and to elucidate the reflection idea by turning it into the cornerstone of a linguistic theory of meaning

Linguistic Disorders and Pathologies Gerhard Blanken,Jürgen Dittmann,Hannelore Grimm,John C. Marshall,Claus-W. Wallesch,2008-07-14 This handbook is geared towards the following aims Reviewing the state of research on disordered language perception and production in adults and children Describing and discussing present attempts at modelling human language processing by using linguistic disorders and pathologies as a data base Presenting diagnostic and therapeutic concepts Pointing out gaps and inconcistencies in current knowledge and theories In bringing together knowlegde of different sources and disciplines under a common roof the editors have achieved a comprehensive overview of the state of the art in the field of language pathology Because of the diversity of the disciplines contributing to this scientific field the chapters differ clearly in theories and methodologies Yet this handbook represents a clear and common interdisciplinary contribution to linguistic disorders and pathologies and furthermore demonstrates the amount of interdisciplinary interaction still required We chose this title in order to encompass as broadly as possible abnormalities and alterations of language perception comprehension and production in adults and children including nonpathological disorders This handbook will be of interest to anybody involved with disordered language and or language and speech disturbances such as linguists and psychologists working in related research areas or teaching related subjects scientists analyzing and modelling linguistic and cognitive processes e g in Cognitive Psychology Psycholinguistics Neurolinguistics Neuropsychology Behavioural Neurology Artificial Intelligence Research and Cognitive Science clinicians dealing with aquired or developmental language disorders and speech pathologists and therapists Besides presenting the state of the art the handbook provides rich bibliographical

Phonological Structure and Language Processing Takashi Otake,Anne Cutler,2011-07-22 No detailed description available for Phonological Structure and Language Processing A Descriptive-analytical Study of the Basic Public Speaking Course at Michigan State University William Bradshaw Lashbrook,1965 *Intelligent Integrated Media Communication Techniques* Jurij F. Tasic,Mohamed Najim,Michael Ansorge,2003-11-30 This volume contains many examples and applied methods explaining the basic architecture of the mobile terminals It includes sufficient introductory material to enabling even non expert readers to understand the topics and to make a step towards system integration of complex future applications VoIP Technologies Shigeru Kashiara,2011-02-14 This book provides a collection of 15 excellent studies of Voice over IP VoIP technologies While VoIP is undoubtedly a powerful and innovative communication tool for everyone voice communication over the Internet is inherently less reliable than the public switched telephone network because the Internet functions as a best effort network without Quality of Service guarantee and voice data cannot be retransmitted This book introduces research strategies that address various issues with the aim of enhancing VoIP quality We hope that you will enjoy reading these diverse studies and that the book will provide you with a lot of useful information about current VoIP technology research *New Spectral Methods for Analysis of Source/filter Characteristics of Speech Signals* Baris Bozkurt,Similar,2006 This study proposes a new spectral representation called the Zeros of Z Transform ZZT which is an all zero representation of the z transform of the signal In addition new chirp group delay processing techniques are developed for analysis of resonances of a signal The combination of the ZZT representation with the chirp group delay processing algorithms provides a useful domain to study resonance characteristics of source and filter components of speech Using the two representations effective algorithms are developed for source tract decomposition of speech glottal flow parameter estimation formant tracking and feature extraction for speech recognition The ZZT representation is mainly important for theoretical studies Studying the ZZT of a signal is essential to be able to develop effective chirp group delay processing methods Therefore first the ZZT representation of the source filter model of speech is studied for providing a theoretical background We confirm through ZZT representation that anti causality of the glottal flow signal introduces mixed phase characteristics in speech signals The ZZT of windowed speech signals is also studied since windowing cannot be avoided in practical signal processing algorithms and the effect of windowing on ZZT representation is drastic We show that separate patterns exist in ZZT representations of windowed speech signals for the glottal flow and the vocal tract contributions A decomposition method for source tract separation is developed based on these patterns in ZZT We define chirp group delay as group delay calculated on a circle other than the unit circle in z plane The need to compute group delay on a circle other

than the unit circle comes from the fact that group delay spectra are often very noisy and cannot be easily processed for formant tracking purposes the reasons are explained through ZST representation In this thesis we propose methods to avoid such problems by modifying the ZST of a signal and further computing the chirp group delay spectrum New algorithms based on processing of the chirp group delay spectrum are developed for formant tracking and feature estimation for speech recognition The proposed algorithms are compared to state of the art techniques Equivalent or higher efficiency is obtained for all proposed algorithms The theoretical parts of the thesis further discuss a mixed phase model for speech and phase processing problems in detail Index Terms spectral representation source filter separation glottal flow estimation formant tracking zeros of z transform group delay processing phase processing

Pragmatic Disorders Louise Cummings, 2014-01-10 This wide ranging survey of the state of the art in clinical pragmatics includes an examination of pragmatic disorders in previously neglected populations such as juvenile offenders children and adults with emotional and behavioural disorders and adults with non Alzheimer dementias This book makes a significant contribution to the discussion of pragmatic disorders by exploring topics which have a fast rising profile in the field These topics include disorders in which there are both pragmatic and cognitive components and studies of the complex impacts of pragmatic disorders such as mental health problems educational disadvantage and social exclusion This book also presents a critical evaluation of our current state of knowledge of pragmatic disorders The author focuses on the lack of integration between theoretical and clinical branches of pragmatics and argues that the work of clinicians is all too often inadequately informed by theoretical frameworks She attempts to bridge these gaps by pursuing a closer alliance of clinical and theoretical branches of pragmatics It is claimed that this alliance represents the most promising route for the future

development of the field At once a yardstick measuring progress thus far in clinical pragmatics and also a roadmap for future research development this single author volume defines where we have reached in the field as well as where we have to go next

Speech Presentation in Homeric Epic Deborah Beck, 2012-11-01 The Iliad and the Odyssey are emotional powerhouses largely because of their extensive use of direct speech Yet this characteristic of the Homeric epics has led scholars to underplay the poems use of non direct speech the importance of speech represented by characters and the overall sophistication of Homeric narrative as measured by its approach to speech representation In this pathfinding study by contrast Deborah Beck undertakes the first systematic examination of all the speeches presented in the Homeric poems to show that Homeric speech presentation is a unified system that includes both direct quotation and non direct modes of speech presentation Drawing on the fields of narratology and linguistics Beck demonstrates that the Iliad and the Odyssey represent speech in a broader and more nuanced manner than has been perceived before enabling us to reevaluate our understanding of supposedly modern techniques of speech representation and to refine our idea of where Homeric poetry belongs in the history of Western literature She also broadens ideas of narratology by connecting them more strongly with relevant areas of linguistics as she uses both to examine the full range of speech representational strategies in the Homeric poems Through this in depth analysis of how speech is represented in the Homeric poems Beck seeks to make both the process of their composition and the resulting poems themselves seem more accessible despite pervasive uncertainties about how and when the poems were put together
